

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Note

OSHA is initiating a regulatory review of its existing safety and health standards in response to the President's Executive Order 13563, "Improving Regulations and Regulatory Review" (76 FR 38210). This review, the Standards Improvement Project-Phase IV (SIP IV), is the fourth in a series of rulemaking actions to improve and streamline OSHA standards. OSHA's Standards Improvement Projects remove or revise individual requirements in safety and health standards that are confusing, outdated, duplicative or inconsistent. The goal of the proposed rulemaking is to reduce regulatory burden while maintaining or enhancing worker safety and health.

As part of the SIP IV proposal, OSHA is proposing to revise paragraph (h) and Appendix D of its Cotton Dust standard (as well as remove Appendix C). Many of the revisions are simply editorial, to clarify existing language, as well as to update outdated pulmonary function measurements. OSHA is also proposing to update paragraph (h)(2)(iii) to require the evaluation of FEV1, FVC, and the FEV1/FVC ratio against the lower limit of normal (LLN) for each race/ethnic group, by age, which is consistent with generally accepted practices.

Also, OSHA is proposing to remove the provisions in its standards that require employers to collect and record employees' social security numbers. Therefore, the Agency requests to remove the social security number collection requirements from the provisions in this Information Collection Request (ICR).

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

**SUPPORTING STATEMENT FOR THE
INFORMATION COLLECTION REQUIREMENTS IN
THE COTTON DUST STANDARD (29 CFR 1910.1043)¹
OFFICE OF MANAGEMENT AND BUDGET (OMB)
CONTROL NO. 1218-0061 (August 2016)**

A. JUSTIFICATION

- 1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.**

The main purpose of the Occupational Safety and Health Act (“OSH Act” or “Act”) is to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651). To achieve this objective, the OSH Act specifically authorizes “the development and promulgation of occupational safety and health standards” (29 U.S.C. 651). The Act states further that [t]he Secretary . . . shall prescribe such rules and regulations as [he/she] may deem necessary to carry out [his/her] responsibilities under this Act, including rules and regulations dealing with the inspection of an employer’s establishment” (29 U.S.C. 651).

The Act specifically authorizes the Occupational Safety and Health Administration (“OSHA” or “Agency”) to issue standards that “prescribe the use of labels or other appropriate forms of warning as are necessary to insure that employees are apprized of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure” (29 U.S.C. 655). In addition, the OSH Act mandates that “[e]ach employer shall make, keep and preserve, and make available to the Secretary . . . such records . . . as the Secretary . . . may prescribe by regulation as necessary or appropriate for the enforcement of this Act . . .” (29 U.S.C. 657).

To protect employee health, the OSH Act authorizes the Agency to develop standards that provide for “monitoring or measuring employee exposure” to occupational hazards and “prescribe the type and frequency of medical examinations and other tests which shall be made available [by the employer] to employees exposed to such hazards . . . to most effectively determine whether the health of such employees is adversely affected by such exposure” (29 U.S.C. 655). Moreover, the Act directs the Agency to issue regulations requiring employers to

¹ The purpose of this Supporting Statement is to analyze and describe the burden hours and costs associated with provisions of this standard that contain paperwork requirements; it does not provide information or guidance on how to comply with, or how to enforce, the Standard.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

maintain accurate records of employee exposures to potentially toxic materials or other harmful physical agents which are required to be monitored and measured . . ." (29 U.S.C. 657). In addition, the OSH Act mandates that "[e]ach employer shall make, keep and preserve, and make available to the Secretary [of Labor] . . . such records regarding [his/her] activities relating this Act as the Secretary . . . may prescribe by regulation as necessary or appropriate for the enforcement of this Act . . ." (29 U.S.C. 657). Under the authority granted by the OSH Act, the Agency promulgated its Cotton Dust Standard as 29 CFR 1910.1043 (the "Standard"). OSHA issued the Standard after determining that occupational exposure to cotton dust poses a health risk to employees. This determination showed that cotton-dust exposure results in an increased risk of developing pulmonary diseases especially byssinosis that may result in disability and premature death. Items 2 and 12 below describe in detail the specific information collection requirements of the Standard.

2. **Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the Agency has made of the information received from the current collection.**

A. Exposure monitoring (§1910.1043(d))

Alternative to the vertical elutriator cotton dust sampler §1910.1043(d)(1)(iii) - If an alternative to the vertical elutriator cotton dust sampler is used, the employer shall establish equivalency by reference to an OSHA opinion or by documenting, based on data developed by the employer or supplied by the manufacturer, that the alternative sampling devices meets the following criteria:

§1910.1043(d)(1)(iii)(A) - It collects respirable particulates in the same range as the vertical elutriator (approximately 15 microns);

§1910.1043(d)(1)(iii)(B) - Replicate exposure data used to establish equivalency are collected in side-by-side field and laboratory comparisons; and

§1910.1043(d)(1)(iii)(C) - A minimum of 100 samples over the range of 0.5 to 2 times the permissible exposure limit are collected, and 90% of these samples have an accuracy range of plus or minus 25 per cent of the vertical elutriator reading with a 95% confidence level as demonstrated by a statistically valid protocol. (An acceptable protocol for demonstrating equivalency is described in Appendix E of this section.)

Purpose: Obtaining an OSHA opinion or developing documentation to meet the specified criteria provides assurance to employees that the alternative sampler used by an employer is as accurate in collecting cotton dust samples as the vertical elutriator.

Initial monitoring §1910.1043(d)(2) - Each employer who has a place of employment within the

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

scope of paragraph (a)(1), (a)(4), or (a)(5) of this section shall conduct monitoring by obtaining measurements which are representative of the exposure of all employees to airborne concentrations of lint-free respirable cotton dust over an eight-hour period. The sampling program shall include at least one determination during each shift for each work area.

Purpose: Such monitoring allows employers to identify areas and operations that may require additional reduction in airborne cotton dust to meet the permissible exposure limit (PEL).² Initial exposure monitoring results also assist employers in determining the need for engineering controls, instituting or modifying work practices, and in selecting appropriate respiratory protection to prevent employees from overexposure to cotton dust.

Periodic monitoring §1910.1043 (d)(3)(i) - If the initial monitoring required by paragraph (d)(2) of this section or any subsequent monitoring reveals employee exposure to be at or below the permissible exposure limit, the employer shall repeat the monitoring for those employees at least annually.

§1910.1043(d)(3)(ii) - If the initial monitoring required by paragraph (d)(2) of this section or any subsequent monitoring reveals employee exposure to be above the PEL, the employer shall repeat the monitoring for those employees at least every six months.

Purpose: Periodic monitoring allows employers to determine if minor changes in processes, materials, or environmental conditions result in increased concentrations of airborne cotton dust. If so, periodic monitoring also enables employers to evaluate the effectiveness of selected control methods. In addition, these measurements remind both the employer and employees of the continuing need to protect against the hazards that could result from employee overexposure to cotton dust.

§1910.1043(d)(3)(iii) - Whenever there has been a production, process, or control change which may result in new or additional exposure to cotton dust, or whenever the employer has any other reason to suspect an increase in employee exposure, the employer shall repeat the monitoring and measurements for those employees affected by the change or increase.

Purpose: Additional monitoring ensures that the workplace is safe, or alerts to the need for increased control of airborne cotton dust.

Employee notification (§1910.1043(d)(4))

§1910.1043(d)(4)(i) - The employer must, within 15 working days after the receipt of the results of any monitoring performed under this section, notify each affected employee of these results

² The PEL differs according to the type of cotton dust involved; see paragraph (c)(1) of the Standard.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

either individually in writing or by posting the results in an appropriate location that is accessible to employees.

§1910.1043(d)(4)(ii) - Whenever the results indicate that the employee's exposure exceeds the applicable permissible exposure limit specified in paragraph (c) of this section, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken to reduce exposure below the permissible exposure limit.

Purpose: Written notices provide assurance that employees are informed about exposure data, and gives employees specific information about the efforts the employer is taking to lower their exposures and furnish them with a safe and healthful workplace in accordance with section 8(c) (3) of the Act.

B. Methods of compliance (§1910.1043(e))

Compliance program §1910.1043(e)(3)(i) - Where the most recent exposure monitoring data indicates that any employee is exposed to cotton dust levels greater than the permissible exposure limit, the employer shall establish and implement a written program sufficient to reduce exposures to or below the permissible exposure limit solely by means of engineering controls and work practices as required by paragraph (e)(1) of this section.

§1910.1043(e)(3)(ii) - The written program shall include at least the following:

§1910.1043(e)(3)(ii)(A) - A description of each operation or process resulting in employee exposure to cotton dust at levels greater than the PEL;

§1910.1043(e)(3)(ii)(B) - Engineering plans and other studies used to determine the controls for each process;

§1910.1043(e)(3)(ii)(C) - A report of the technology considered in meeting the permissible exposure limit;

§1910.1043(e)(3)(ii)(D) - Monitoring data obtained in accordance with paragraph (d) of this section;

§1910.1043(e)(3)(ii)(E) - A detailed schedule for development and implementation of engineering and work practice controls, including exposure levels projected to be achieved by such controls;

§1910.1043(e)(3)(ii)(F) - Work practice program; and

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

§1910.1043(e)(3)(ii)(G) - Other relevant information.

§1910.1043(e)(3)(v) - Written programs shall be submitted, upon request, to the Assistant Secretary and the Director, and shall be available at the worksite for examination and copying by the Assistant Secretary, the Director, and any affected employee or their designated representatives.

§1910.1043(e)(3)(vi) - The written program required under paragraph (e)(3) of this section shall be revised and updated when necessary to reflect the current status of the program and current exposure levels.

Purpose: This requirement commits the employer to evaluating employee exposure and establishing an organized and complete program for reducing employee exposures to or below the PEL. Revising and updating the written program serves to remind employers to implement and maintain the exposure control methods required by the Standard.

Providing the written programs to OSHA compliance officers ensures that employers are in compliance with the Standard, while NIOSH may use the information for research purposes. However, OSHA has determined that the requirement for employers to make information available upon request to the Assistant Secretary is not a collection of information; OSHA typically requests access to information during an inspection, and information collected by the Agency during the investigation is not subject to the PRA under 5 CFR 1320.4(a)(2). Additionally, OSHA does not anticipate that NIOSH will request employers to make this information available during the approval period. Therefore, the burden for the employer to make this information available to NIOSH is zero.

Employees and their designated representatives review the written programs to determine if the programs validly represent current exposure conditions, and if employers are taking appropriate actions to control cotton-dust exposures.

C. Respirator protection (§1910.1043(f))

Respirator program (§1910.1043(f)(2)(i)³ - The employer must implement a respiratory protection program in accordance with 29 CFR 1910.134 (b) through (d) (except (d)(1)(iii)), and (f) through (m), which covers each employee required by this section to use a respirator.

³ OSHA accounts for the burden hours and costs resulting from the respiratory-protection requirements under the Information Collection Request (ICR) for its Respiratory Protection Standard (§1910.134), OMB Control No. 1218-0099.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Purpose: The purpose of these requirements is to ensure that employers establish a standardized procedure for selecting, using, and maintaining respirators for each workplace requiring respirator use. Developing written procedures ensures that employers implement a respirator program that meets the needs of their workers.

D. Work practices (§1910.1043(g))

§1910.1043(g) - Each employer shall, regardless of the level of employee exposure, immediately establish and implement a written program of work practices which shall minimize cotton dust exposure. The following shall be included w[h]ere applicable:

§1910.1043(g)(1) - Compressed air "blow down" cleaning shall be prohibited where alternative means are feasible. Where compressed air is used for cleaning, the employees performing the "blow down" or "blow off" shall wear suitable respirators. Employees whose presence is not required to perform "blow down" or "blow of" shall be required to leave the area affected by the "blow down" or "blow off" during this cleaning operation.

§1910.1043(g)(2) - Cleaning of clothing or floors with compressed air shall be prohibited.

§1910.1043(g)(3) - Floor sweeping shall be performed with a vacuum or with methods designed to minimize dispersal of dust.

§1910.1043(g)(4) - In areas where employees are exposed to concentrations of cotton dust greater than the permissible exposure limit, cotton and cotton waste shall be stacked, sorted, baled, dumped, removed or otherwise handled by mechanical means, except where the employer can show that it is infeasible to do so. Where infeasible, the method used for handling cotton and cotton waste shall be the method which reduces exposure to the lowest level feasible.

Purpose: Having the programs in writing, employees have available to them the detailed work-practice procedures necessary to prevent unnecessary or excessive exposure to cotton dust.

E. Medical surveillance (§1910.1043(h))

General §1910.1043(h)(1)(i) - Each employer covered by the standard shall institute a program of medical surveillance for all employees exposed to cotton dust.

§1910.1043(h)(1)(ii) - The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician and are provided without cost to the employee.

Initial examinations §1910.1043(h)(2) - The employer shall provide medical surveillance to

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

each employee who is or may be exposed to cotton dust. For new employees, this examination shall be provided prior to initial assignment. The medical surveillance shall include at least the following:

§1910.1043(h)(2)(i) - A medical history;

§1910.1043(h)(2)(ii) - The standardized questionnaire contained in Appendix B; and

§1910.1043(h)(2)(iii) - A pulmonary function measurement, including forced vital capacity (FVC) and forced expiratory volume in one second (FEV1), and determination of the FEV1/FVC ratio shall be made. FVC, FEV1, and FEV1/FVC ratio values shall be compared to appropriate race/ethnicity-specific Lower Limit of Normal (LLN) values and predicted values published in the third National Health and Nutrition Examination Survey (NHANES III) reference data, which are incorporated by reference. To obtain reference values for Asian-Americans, NHANES III FEV1 and FVC predicted and LLN values for Caucasians shall be multiplied by 0.88 to adjust for ethnic differences. These determinations shall be made for each employee before the employee enters the workplace on the first day of the work week, preceded by at least 35 hours of no exposure to cotton dust. The tests shall be repeated during the shift, no less than 4 and no more than 10 hours after the beginning of the work shift; and, in any event, no more than one hour after cessation of exposure. Such exposure shall be typical of the employee's usual workplace exposure.

Periodic examinations §1910.1043(h)(3)

Under these provisions, employers are to implement a medical surveillance program for every employee exposed to cotton dust. Accordingly, employers must provide new employees involved in textile and non-textile operations with an initial medical examination prior to their job assignment if such an assignment exposes the employees to cotton dust. Employers involved in textile operations must provide an annual medical examination for employees exposed to cotton dust above the action level (AL), or a medical examination once every two years for employees exposed to cotton dust at or below the AL and to specific types of washed cotton (regardless of their exposure level). Employers involved in non-textile operations also are to provide their employees with a medical examination once every two years. Under some conditions (e.g., specific reductions in pulmonary-function parameters as compared to the LLN, in the opinion of the physician), employees must receive a medical examination every six months.

Purpose: Documentation and maintenance of the medical examination results provide a continuous record of employee health. Physicians use these records to determine the extent to which employees, since their last examination, experience health effects related to their cotton-

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

dust exposure. Further, if symptoms of physical damage appear, the physician often needs information about an employee's previous medical conditions to make an accurate diagnosis of the new condition, ascertain its apparent cause, and identify a course of treatment. Medical records also permit employees to determine whether or not they need treatment, or to evaluate the effectiveness of their employer's exposure reduction program.

Information provided to the physician (§1910.1043(h)(4))

§1910.1043(h)(4) - Information provided to the physician. The employer shall provide the following information to the examination physician:

§1910.1043(h)(4)(i) - A copy of this regulation and its Appendices:

§1910.1043(h)(4)(ii) - A description of the affected employee's duties as they relate to the employee's exposure;

§1910.1043(h)(4)(iii) - The employee's exposure level or anticipated exposure level;

§1910.1043(h)(4)(iv) - A description of any personal protective equipment used or to be used; and

§1910.1043(h)(4)(v) - Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

Purpose: Making this information available to physicians assists them in evaluating the employee's health and fitness for specific job assignments involving cotton-dust exposure. As noted earlier, if symptoms of physical damage appear, the physician often needs information about an employee's previous medical conditions to make an accurate diagnosis of the new condition, its apparent cause, and the course of treatment required.

Physician's written opinion (§1910.1043(h)(5))

§1910.1043(h)(5)(i) - The employer shall obtain and furnish the employee with a copy of a written opinion from the examining physician containing the following:

§1910.1043(h)(5)(i)(A) - The results of the medical examination and tests including the FEV(1), FVC, AND FEV(1)/FVC ratio;

§1910.1043(h)(5)(i)(B) - The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to cotton dust;

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

§1910.1043(h)(5)(i)(C) - The physician's recommended limitations upon the employee's exposure to cotton dust or upon the employee's use of respirators including a determination of whether an employee can wear a negative pressure respirator, and where the employee cannot, a determination of the employee's ability to wear a powered air purifying respirator; and,

§1910.1043(h)(5)(i)(D) - A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further examination or treatment.

§1910.1043(h)(5)(ii) - The written opinion obtained by the employer shall not reveal specific findings or diagnoses unrelated to occupational exposure.

Purpose: The purpose of requiring the employer to obtain a written opinion from the examining physician is to provide the employer with medical information to aid in determining the initial placement of an employee, and to assess the employee's ability to use protective clothing and equipment. The physician's opinion also provides information to the employer about whether or not the employee has a condition indicating overexposure to cotton dust. The requirement that the physician's opinion be in writing ensures that the information is properly documented for later reference. Providing employees with a copy of the physician's written opinion informs them of the medical examination results so that they can assist in determining the need for, and evaluate the effectiveness of, treatment or other interventions.

F. Employee education and training (§1910.1043(i) and (ii))

Upon further analysis, the requirements that employers provide training to workers under paragraphs *1910.1043(i)(1)(i) and (ii)* are not considered to be collections of information. OSHA is not taking burden for these activities under Item 12 of this Supporting Statement.

Access to training materials §1910.1043(i)(2)

§1910.1043(i)(2)(i) - Each employer shall post a copy of this section with its appendices in a public location at the workplace, and shall, upon request, make copies available to employees.

§1910.1043(i)(2)(ii) - The employer shall provide all materials relating to the employee training and information program to the Assistant Secretary and the Director upon request.

Note: OSHA has determined that the requirement for employers to make information available upon request to the Assistant Secretary is not a collection of information; OSHA typically requests access to information during an inspection, and information collected by the Agency

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

during the investigation is not subject to the PRA under 5 CFR 1320.4(a)(2). While NIOSH may use information collected from employers for research purposes, the Agency does not anticipate that NIOSH will request employers to make available information during the approval period. Therefore, the burden for the employer to make this information available to NIOSH is zero.

G. Signs (§1910.1043(j))

The employer shall post the following warning sign in each work area where the permissible exposure limit for cotton dust is exceeded:

WARNING
COTTON DUST WORK AREA
MAY CAUSE ACUTE OR DELAYED
LUNG INJURY
(BYSSINOSIS)
RESPIRATORS
REQUIRED IN THIS AREA

Purpose: These signs serve to warn employees that they are in or near a hazardous area. Warning signs also supplement the training employees receive under the Standard.

H. Recordkeeping (§1910.1043(k))

Exposure measurements §1910.1043(k)(1)

§1910.1043(k)(1)(i) - The employer shall establish and maintain an accurate record of all measurements required by paragraph (d) of this section.

§1910.1043(k)(1)(ii) - The record shall include:

§1910.1043(k)(1)(ii)(A)⁴ - A log containing the items listed in paragraph IV (a) of Appendix A, and the dates, number, duration, and results of each of the samples taken, including a description of the procedure used to determine representative employee exposure;

§1910.1043(k)(1)(ii)(B) - The type of protective devices worn, if any, and length of time worn; and

⁴ An employer may instead retain a copy of the Standard and its appendices and make this material available to the employee if the employer references the Standard and its appendices in the record maintained for each employee.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

§1910.1043(k)(1)(ii)(C) - The names, job classifications, and exposure levels of employees whose exposure the measurement is intended to represent.

§1910.1043(k)(1)(iii) - The employer shall maintain this record for at least 20 years.

Medical surveillance §1910.1043(k)(2)

§1910.1043(k)(2)(i) - The employer shall establish and maintain an accurate medical record for each employee subject to medical surveillance required by paragraph (h) of this section.

§1910.1043(k)(2)(ii) - The record shall include:

§1910.1043(k)(2)(ii)(A) - The name and description of the duties of the employee;

§1910.1043(k)(2)(ii)(B) - A copy of the medical examination results including the medical history, questionnaire response, results of all tests, and the physician's recommendation;

§1910.1043(k)(2)(ii)(C) - A copy of the physician's written opinion;

§1910.1043(k)(2)(ii)(D) - Any employee medical complaints related to exposure to cotton dust;

§1910.1043(k)(2)(ii)(E) - A copy of this standard and its appendices, except that the employer may keep one copy of the standard and the appendices for all employees, provided that he references the standard and appendices in the medical surveillance record of each employee; and

§1910.1043(k)(2)(ii)(F) - A copy of the information provided to the physician as required by paragraph (h)(4) of this section.

§1910.1043(k)(2)(iii) - The employer shall maintain this record for at least 20 years.

Purpose: This requirement provides both employers and employees with access to useful information. The exposure monitoring and medical surveillance records required by the Standard assist employees and their physicians in determining the need for treatment or other interventions as a result of the employees' exposure to cotton dust. The information also alerts employers when employee overexposure to cotton dust occurs, thereby enabling employers to take steps required to reduce cotton-dust exposures. Maintaining the records for a 20 year period is necessary because of the long latency associated with the development of pulmonary diseases caused by exposure to cotton dust.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Availability (§1910.1043(k)(3))

§1910.1043(k)(3)(i) - The employer shall make all records required to be maintained by paragraph (k) of this section available to the Assistant Secretary and the Director for examination and copying.⁵

§1910.1043(k)(3)(ii) - Employee exposure measurement records and employee medical records required by this paragraph shall be provided upon request to employees, designated representatives, and the Assistant Secretary in accordance with 29 CFR 1910.1020(a) through (e) and (g) through (i).

Purpose: The OSHA compliance officer uses these records to assess employer compliance with the major exposure monitoring and medical surveillance requirements of the Standard, while NIOSH may compile these records for research purposes. Employees and their designated representatives use exposure monitoring and medical surveillance records to assess an employee's medical status over the course of employment, to evaluate the effectiveness of the employer's exposure reduction program, and for other reasons.

Purpose: Workers and their designated representatives may use these records to evaluate worker medical status over the course of employment, to determine the effectiveness of the employer's exposure reduction program, and for other reasons. An OSHA compliance officer reviews the records to assess the employer's compliance with the medical and exposure control provisions of the Standard.

Paragraph (h) of §1910.1020 requires employers who cease to do business to transfer medical and exposure-monitoring records to the successor employer, who then must receive and maintain the records. If no successor employer is available, the employer must, at least three months before ceasing business, notify current workers who have records of their right to access these records.

OSHA considers the employer's transfer of records to a successor employer to be usual and customary communications during the transition from one employer to a successor employer. In this regard, the employer would communicate the location of all records, including employee

⁵The Agency has determined that the requirement for employers to make records available upon request to the Assistant Secretary is no longer considered a collection of information. OSHA typically requests access to records during an inspection, and information collected by the Agency during the investigation is not subject to the PRA under 5 CFR 1320.4(a)(2). While NIOSH may use records collected from employers for research purposes, the Agency does not anticipate that NIOSH will request employers to make available records during the approval period.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

exposure-monitoring and medical records, at the facility to the successor employer during the transfer of business operations, as a matter of usual and customary business practice.

In addition, OSHA accounts for the burden hours and costs resulting from the employee notification requirements under the Information Collection Request (ICR) for its Access to Employee Exposure and Medical Records Standard (§1910.1020), OMB Control No. 1218-0065.

- 3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burdens.**

Employers may use improved information technology, including electronic recording, when establishing or maintaining records. OSHA wrote the paperwork requirements of the Standard in performance-oriented language, i.e., in terms of what data to collect, not how to collect the data.

- 4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item A.2 above.**

The requirements to collect and maintain information are specific to each employer and employee involved, and no other source or agency duplicates these requirements or can make the required information available to OSHA (i.e., the required information is available only from employers).

- 5. If the collection of information impacts small businesses or other small entities, describe any methods used to minimize burden.**

The information collection requirements of the Standard do not have a significant impact on a substantial number of small entities.

- 6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.**

The Agency believes that the information collection frequencies required by the Standard are the minimum frequencies necessary to effectively monitor the exposure and health status of workers exposed to cotton dust, and; thereby, fulfill its mandate “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” as specified by the OSH Act at 29 U.S.C. 651. Accordingly, if employers do not perform the required information collections, or delay in providing this information, workers will have an increased probability of developing serious or fatal pulmonary disease because of their cotton-dust exposures.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
- requiring respondents to report information to the agency more often than quarterly;
 - requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
 - requiring respondents to submit more than an original and two copies of any document;
 - requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records for more than three years;
 - in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
 - requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
 - that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
 - requiring respondents to submit proprietary trade secret, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

Paragraph (d)(4) requires that the employer notify each worker in writing of exposure monitoring results within 15 working days after receiving these results. The 15 working day period is a reasonable time for notification in general industry with its more stable workforce and is the time frame OSHA adopted in most of its health standards for general industry. In addition, paragraph (k)(1) and (k)(2) require exposure-measurement and medical surveillance records to be maintained for at least 20 years. Maintaining the records for a 20-year period is necessary because of the long latency associated with the development of pulmonary diseases caused by exposure to cotton dust.

8. **If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.**

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting

**THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016**

format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years, even if the collection-of-information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

In accordance with 5 CFR 1320.11, OSHA submitted a revised Cotton Dust Standard Information Collection Request (ICR) to the Office of Management and Budget (OMB) for the Standards Improvement Project IV proposal. OSHA is seeking comment on its proposal to eliminate the requirements to collect and record social security numbers from the Standard and revise paragraph (h) and Appendix D of its Cotton Dust standard (as well as remove Appendix C). As noted in the Section V. of the preamble, "Paperwork Reduction Act," members of the public who wish to provide comments on this ICR must submit written comments to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, OSHA (RIN-1218-AC67), Office of Management and Budget, Room 10235, Washington, DC 20503, Fax: 202-395-5806 (this is not a toll-free number), e-mail OIRA_submission@omb.eop.gov. OSHA encourages commenters also to submit their comments on these paperwork requirements to the rulemaking docket, Docket Number OSHA-2012-0007, Room N-2625, 200 Constitution Avenue, NW., Washington, DC 20210, along with their comments on other parts of the proposed rule. Commenters also may submit their comments to OSHA at <http://www.regulations.gov>, the Federal eRulemaking portal. Comments submitted in response to the notice are public records; therefore, OSHA cautions commenters about submitting personal information such as social security numbers and dates of birth. These comments also will become part of the rulemaking record, and will be available for public inspection and copying in the OSHA Docket Office and at <http://www.regulations.gov>. The Agency will respond to any comments received in response to this notice.

Recognizing the importance of public participation in the SIP process, the Agency published a Request for Information (RFI) on December 6, 2012 (77 Federal Register 72781) asking the public to identify standards that were in need of revision or removal, and to explain how such action would reduce regulatory burden while maintaining or increasing the protection afforded to employees. The Agency received 26 comments in response to the RFI. Several of the proposed amendments contained in the proposed rule were recommended in the public comments received in response to the RFI. Other proposed SIP amendments were identified by the Agency's own internal review and by the Advisory Committee for Construction Safety and Health (ACCSH).

- 9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.**

**THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016**

The Agency will provide no payments or gifts to the respondents.

- 10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.**

To ensure that the personal information contained in medical records remains confidential, OSHA developed §1913.10 to regulate access to these records.

- 11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reason why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information is requested, and any steps to be taken to obtain their consent.**

Perceived questions of a sensitive nature may be included in medical questionnaires. Information from medical questionnaires is necessary for the PLHCP or physician, or employer, to determine what protections an employer must take to ensure that the employee will have minimal

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

occupational exposure to hazards such as, insufficient oxygen environments, harmful dusts, fogs, smokes, mists, gases, vapors, and sprays.

12. **Provide estimates of the hour burden of the collection of information. The statement should:**
- **Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.**
 - **If this request for approval covers more than one form, provide separate hour burden estimates for each form.**
 - **Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage-rate categories.**

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Burden Hour and Cost Determinations

To estimate the number of establishments in textile operations that process cotton, the Agency updated the Standard Industrial Classification (SIC) industry codes discussed in previous ICRs to reflect the North American Industrial Classification System (NAICS) codes using the U.S. Census Bureau's *Bridge between SIC and NAICS*.⁶ In many cases, the SIC industry sectors described in the previous ICR comprised only a portion of a given NAICS industry as a whole; the *Bridge* describes each NAICS industry and the SICs or partial SICs of which they are comprised. To determine the number of establishments in each industry sector, it was necessary to first determine which percentage of establishments in the overall NAICS industry was comprised by a given SIC industry sector. This ratio was then applied to the current industry establishments and employment statistics as listed in the 2011 County Business Patterns Survey.⁷ The Agency has retained assumptions from previous ICRs regarding the percentage of establishments processing cotton and also the percentage of workers exposed to cotton dust.^{8,9} Tables 1 and 2 below present data for establishments that have textile operations that process cotton, and for exposed workers involved in operations that process cotton, respectively.

⁶*Bridge between SIC and NAICS* (U.S. Census Bureau, 1997 Economic Census, Comparative Statistics. <http://www.census.gov/epcd/ec97brdg/>).

⁷U.S. Census Bureau, 2011 County Business Patterns Survey. <http://censtats.census.gov/cbpnaic/cbpnaic.shtml>.

⁸Source: Centaur Associates, Inc. (CAI), *Technical and Economic Analysis of Regulating Occupational Exposure to Cotton Dust*, Vol. I, Exhibit 2-2, January 1983. CAI prepared this report for the 1983 Regulatory Impact Analysis performed during a revision to the Standard.

⁹For previous revisions to this ICR, the Agency contacted the Agricultural Research Service and the National Cotton Council in order to update the estimated number of establishments and workers in textile operations; however, neither organization was able to provide updated estimates.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Non-textile operations principally involve the cottonseed processing and cotton-waste recycling industries; only the paperwork requirements specified for medical surveillance under paragraph (h) of the Standard apply to these industries. Previously, the Agency consulted with the National Cottonseed Products Association (NCPA) and the Secondary Materials and Recycled Textiles Association (SMART) to update employment estimates for these industries. Since neither organization was able to provide updated estimates, the Agency estimates that there are roughly 167 workers performing cottonseed processing.¹⁰ The Agency also assumes that the cotton-waste recycling industry contains an estimated production workforce of 748¹¹ workers. For both industries, the Agency assumes an annual employee turnover rate of 24%.¹²

The Agency adopted the mean wage rates from “*May 2013 National Occupational Employment and Wage Estimates, United States*,” Bureau of Labor Statistics, U.S. Department of Labor, http://www.bls.gov/oes/current/oes_nat.htm Occupation Code: 29-0000. Total compensation for these occupational categories includes an adjustment of 31.2 percent (*Employer Costs for Employee Compensation, March 2014, p.1*) for fringe benefits; this figure represents the average level of fringe benefits in the private sector. The costs of labor used in this analysis are, therefore, estimates of total hourly compensation. These hourly wages are:

- Supervisors: \$37.00
- Production workers: \$16.00
- Secretarial workers: \$21.00
- Industrial hygienist technicians: \$30.00

10

¹⁰Source: U.S. Census Bureau, 2009 County Business Patterns Survey: NAICS 314999 – All Other Miscellaneous Textile Product Mills. The 2008 ICR update estimated that there were 250 production employees in the cottonseed processing industry. From 2008 to 2009, employment in NAICS 314999 declined by roughly 33.2%; thus, it was assumed that employment in the cottonseed processing industry also declined by 33.2%.

¹¹Source: U.S. Census Bureau, 2009 County Business Patterns Survey: NAICS 314999 – All Other Miscellaneous Textile Product Mills. In 2011, there were 1,082 production employees in the cotton-waste recycling industry; a decline of approximately 5%.

¹²Source: U.S. Bureau of Labor Statistics, **Job Openings and Labor Turnover Survey (JOLTS)**. This value represents the average total separations rate for manufacturing industries in the United States from 2013. The Agency assumes that employee turnover in these industries is the same as manufacturing industries in the United States as a whole.

^[a]Source: U.S. Census Bureau, 2011 County Business Patterns Survey. Employment totals were derived using the ratios used in Table 1 to determine the number of establishments in each industry sector. Thus, if a given industry sector in Table 1 comprises 50% of the total number of establishments in a NAICS industry; it was assumed that the industry sector also comprised 50% of the workers.

^[b]Source: The CAI Report with the exception of the calculation for the “Knitting Mills” industry sector. In this sector, the Agency estimates there are 1,335 workers exposed to cotton dust, or 4.9% of the workers in the sector processing cotton. The 4.9% is based on the current percentage of establishments processing cotton for “Knitting Mills.”

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

The following sections summarize the methodology used for estimating the number of burden hours and costs resulting from the information collection requirements of the Standard.

A. Exposure monitoring (§1910.1043(d))

Alternative cotton-dust sampler (§1910.1043(d)(1))

During the previous clearance period, no employers requested OSHA's opinion regarding an alternative cotton-dust sampler. Therefore, the Agency believes that no employer will make such a request during the clearance period covered by this ICR, and is not taking burden hours and costs for this paperwork requirement.

Initial, periodic, and additional monitoring (§§1910.1043(d)(2) and (d)(3))

OSHA assumes that employers monitor each worker exposed to cotton dust during textile operations an average of once a year; this average includes initial, periodic, and additional exposure monitoring. From Table 2, the Agency estimates that 11,786 workers are exposed to cotton dust. As described in the Regulatory Impact Analysis (RIA) for the final Standard (December 17, 1985, published at 50 FR 51120), employers use six vertical elutriators (or equivalent samplers) to assess representative cotton-dust exposures for a group of 15 workers, for a total of 786 samples each year (i.e., $11,786 \text{ exposed workers} \div 15 \text{ workers per sample} \times 1 \text{ sample per year}$). In addition, the Agency estimates that an in-house industrial-hygiene technician takes two hours (2 hours) to assemble, check, and disassemble the samplers used for each group of workers, resulting in total annual burden hour and cost estimates of:

Burden hours: $786 \text{ samples} \times 2 \text{ hours} = 1,572 \text{ hours}$

Cost: $1,572 \text{ hours} \times \$30.00 = \$47,160$

Employee notification (§1910.1043(d)(4))

The standard requires employers to notify workers of their exposure-monitoring results. Notification must occur within 15 days after the employer receives the results either by providing each worker with a written copy of their results or by posting the results in an appropriate location that is accessible to the workers. OSHA believes that such notification requires a secretary five minutes (.08 hour) to prepare and post the results for the 257 establishments (Table 1). Accordingly, the total annual burden hour and cost estimates for this paperwork requirement are:

Burden hours: $257 \text{ establishments} \times .08 \text{ hour} = 21 \text{ hours}$

Cost: $21 \text{ hours} \times \$21.00 = \$441$

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

B. Methods of compliance (§1910.1043(e))

Compliance program (§1910.1043(e)(3))

OSHA assumes that no new establishments will process cotton during the clearance period covered by this ICR. Therefore, only existing establishments with poor maintenance or new processes that result in worker exposures above the PEL will update their written compliance programs. Accordingly, the Agency estimates, consistent with the previous ICR, only 10 establishments must revise their written compliance programs each year, and that a supervisor requires about one hour (1 hour) to update such a program. Thus, the total burden hour and cost estimates for this paperwork requirement each year are:

Burden hours: 10 facilities × 1 hour = 10 hours

Cost: 10 hours × \$37.00 = \$370

C. Respirator program (§1910.1043(f)(2)(i))

Employers must implement a respiratory protection program in accordance with 29 CFR 1910.134(b) through (d) (except (d)(1)(iii)), and (f) through (m). OSHA accounts for the burden hours and costs resulting from the respiratory-protection requirements under the Information Collection Request (ICR) for its Respiratory Protection Standard (§1910.134), OMB Control No. 1218-0099.

D. Work practices (§1910.1043(g))

As noted in the previous determination for compliance programs above, OSHA assumes that this ICR will cover only existing cotton-processing establishments. Therefore, no employer will have to develop and implement a written program of work practices to minimize worker cotton-dust exposure during the clearance period covered by the ICR. Accordingly, the Agency is not taking any burden hours or cost for this paperwork requirement.

E. Medical surveillance (§1910.1043(h))

Initial examinations (§1910.1043(h)(2))

With an annual worker turnover rate of 24%¹³, employers hire 2,829 new workers for textile operations each year (i.e., 11,786 existing workers × 24% turnover rate). Assuming the same

¹³Source: U.S. Bureau of Labor Statistics, Job Openings and Labor Turnover Survey (JOLTS) 2004-2010 [http://data.bls.gov/\(01/2015\)](http://data.bls.gov/(01/2015)). This value represents the average total separations rate for manufacturing industries in the United States from 2004 to 2010.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

annual worker turnover rate for the two non-textile operations, the cottonseed processing industry has 40 new workers annually (i.e., 167 workers × 24% turnover rate), while 180 new workers enter the cotton-waste-recycling industry annually (i.e., 748 existing workers × 24% turnover rate). Therefore, the total number of new workers hired each year for textile and non-textile operations is 3,049; each of these new workers must receive an initial medical examination. Assuming that a worker takes one and one-half hours (1.50 hours) of paid time to complete an initial medical examination at an offsite medical facility,¹⁴ the estimated total annual burden hours and cost of this requirement are:

$$\text{Burden hours: } 3,049 \text{ examinations} \times 1.50 \text{ hours} = 4,574 \text{ hours}$$
$$\text{Cost: } 4,574 \text{ hours} \times \$16.00 = \$73,184$$

Periodic examinations (§1910.1043(h)(3))

Consistent with the previous ICR, OSHA assumes that 54% (6,364) of the 11,786 workers exposed to cotton dust during textile operations have exposures above the AL and, therefore, must receive at least an annual periodic medical examination.¹⁵ In addition, only workers who remain with an employer for at least a year require an annual periodic medical examination (i.e., new workers, who constitute 24% (1,527) of the workers exposed above the AL during textile operations, are exempt from these examinations for one year from the date of hire). Therefore, a total of 10,259 of these workers must receive an annual periodic medical examination (i.e., 11,786 workers exposed above the AL (1,566) new workers exposed above the AL).

The remaining 46% (5,422) of exposed workers involved in textile operations have cotton-dust exposures at or below the AL; employers must administer a periodic medical examination to these workers at least once every two years. With an annual turnover rate of 24%, OSHA estimates that 3,132¹⁶ of these workers are available two years after the hiring date for the required medical examination; assuming that employers administer these examinations evenly over any two-year period, then 1,566 of these workers obtain the examination each year.

¹⁴This time includes 30 minutes to travel to and from the offsite facility, and an additional hour to administer an examination. Many employers use offsite medical facilities because employees can receive their initial medical examinations individually (i.e., in a piecemeal fashion), thereby avoiding the wasted time and inefficiencies associated with establishing a permanent onsite medical facility or arranging for a mobile medical facility (e.g., a van).

¹⁵The Agency is using this percentage (54%) because it has no recent information describing cotton-dust exposures among employees involved in textile operations.

¹⁶This number (3,132) was calculated using the following equation: (6,364) exposed employees at or below the AL × 76% = (first year), 4,121 × 76% (second year) = 3,132 exposed employees.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

OSHA assumes that exposed workers involved in non-textile operations have no cotton-dust exposures above the AL; therefore, these workers must receive a periodic medical examination at least once every two years. With an annual turnover rate of 24%, the Agency estimates that 54 exposed workers engaged in cottonseed processing operations and 180 of workers in the cotton waste recycling industry are available two years after the hiring date for periodic medical examinations. If employers distribute these examinations equally over any two-year period, then 110 (i.e., $(40 + 180) \div 2$) of these workers receive the examination each year.

The Agency assumes that a worker takes one hour (1 hour) of paid time to complete a periodic medical examination at an onsite medical facility.¹⁷ With a total of 11,935 periodic medical examinations to administer each year,¹⁸ the Agency estimates the annual burden hours and cost of this requirement to be:

Burden hours: 11,935 examinations \times 1 hour = 11,935 hours
Cost: 11,935 hours \times \$16.00 = \$190,960

Information provided to the physician (§1910.1043(h)(4))

The Agency believes that, for each medical examination administered to a worker, it takes a secretary five minutes (.08 hour) to compile the required information and provide it to the physician. With a total of 14,984 medical examinations to administer each year (i.e., initial examinations and 11,935 periodic examinations), the estimated total annual burden hours and cost of this provision are:

Burden hours: 14,984 examinations \times .08 hour = 1,199 hours
Cost: 1,199 hours \times \$21.00 = \$25,179

Physician's written opinion (§1910.1043(h)(5))

OSHA assumes a secretary spends five minutes (.08 hour) delivering a copy of the physician's written opinion to each worker who receives a medical examination, as well as maintaining a record of the opinion. For the 14,984 medical examinations that workers receive each year, the estimated total annual burden hours and cost of this requirement are:

¹⁷These employees would go to a mobile, onsite medical facility (e.g., a van) because they could receive the medical examinations in small groups; under these conditions, employers save the time (30 minutes) and associated cost required for employees to travel to an offsite medical facility, while making optimum use of the onsite facility.

¹⁸This total consists of 10,259 examinations for textile employees exposed above the AL; 1,566 textile employees exposed at or below the AL; and 110 non-textile employees exposed at or below the AL.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

Burden hours: 14,984 opinions × .08 hour = 1,199 hours
Cost: 1,199 hours × \$21.00 = \$25,179

F. Employee education and training (§1910.1043(i)(1)(i) and (ii))

The requirements that employers provide training to workers under paragraphs (i)(1)(i) and (ii) are not considered to be collections of information. OSHA is not taking burden for these activities under Item 12 of this Supporting Statement.

G. Signs (§1910.1043(j))

The provisions containing the paperwork requirements associated with signs specify the design, format, and specific language for these materials. Therefore, OSHA is taking no burden for these provisions because it is providing the information needed by employers to meet these requirements. (See “Controlling Paperwork Burden on the Public,” 5 CFR 1320.3(c)(2)).

H. Recordkeeping (§1910.1043(k))¹⁹

Exposure measurements (§1910.1043(k)(1))

The Agency assumes that a secretary takes about five minutes (.08 hour) a year to establish and maintain a worker’s exposure-monitoring record. Assuming that 11,786 workers in the textile industry require exposure monitoring (see the determinations for “Initial, Periodic, and Additional Monitoring (§§1910.1043(d)(2) and (d)(3))” above), the total annual burden hours and cost estimates for this requirement are:

Burden hours: 11,786 workers × .08 hour = 943 hours
Cost: 943 hours × \$21.00 = \$19,803

Availability (§1910.1043(k)(3))

The Agency assumes that 10% (1,179) of the covered workers in the textile (i.e., 11,786 covered workers × 10% = 1,179 workers) and non-textile industries (i.e., (40 + 180) × 10% = 22 workers) or their designated representatives request access to these records each year. OSHA estimates that a secretary requires five minutes (.08 hour) to make the requested record available to each worker. Therefore, the total yearly burden hours and cost associated with making the required

¹⁹The Agency is accounting for the medical-surveillance recordkeeping requirements under the determinations for “Physician’s written opinion (§1910.1043(h)(5))” above.

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

records available to workers is:

Burden hours: (1,201 worker-related requests × .08 hour) = 96 hours

Cost: (96 hours × \$21.00 (secretary)) = \$2,016

13. Provide an estimate of the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).
- The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life); and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.
 - If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collection services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.
 - Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

Capital-Cost Determinations

From these determinations (described below), the Agency estimates that the total capital cost of these requirements each year is \$2,896,328. This total consists of \$94,320 for analyzing exposure-monitoring samples, and \$2,802,008 to administer medical examinations.

(A) Exposure monitoring (§1910.1043(d))

This ICR update assumes the average cost for an OSHA-accredited laboratory to analyze a sample of airborne cotton dust is about \$20.²⁰ As noted above under Initial, Periodic, and

²⁰The previous ICR estimated the cost to analyze a sample of cotton dust to be \$20. The Consumer Price Index (CPI) indicated a 6.7% increase in the price of professional medical services from 2011 to 2014; the cost to analyze an air sample was assumed to have increased by 6.7% as well.

**THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016**

Additional Monitoring (§1910.1043(d)(2) and (d)(3)) in Item 12, industrial-hygiene technicians conduct 786 collections using six vertical elutriators per collection (for a total of 4,716 samples; i.e., 6 vertical elutriators × 786 collections). Therefore, the annual cost to analyze the 4,716 samples collected each year is:

$$\text{Cost: } 4,716 \text{ samples} \times \$20 = \$94,320$$

(B) Medical surveillance (§1910.1043(h))

This ICR update assumes the cost of a medical examination required by the Standard to be \$187.²¹ As noted above under Information provided to the physician (§1910.1043(h)(4)) in Item 12 above, the establishments covered by the Standard administer a total of 14,984 medical examinations each year, resulting in the following annual cost:

$$\text{Cost: } 14,984 \text{ examinations} \times \$187 = \$2,802,008$$

The total cost for exposure monitoring and medical surveillance is \$94,320 + \$2,802,008 = 2,896,328

14. **Provide estimates of annualized cost to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies also may aggregate cost estimates from Items 12, 13, and 14 in a single table.**

There is no cost to the Federal Government associated with this information collection request.

15. **Explain the reasons for any program changes or adjustments.**

OSHA is proposing to remove the requirements for employers to collect and record an employee's social security number (SSN) on exposure monitoring and medical surveillance records. Time to document SSN in records is negligible and therefore, the Agency is not requesting changes to the burden hour or cost estimates in this ICR. Table 3 below summarizes burden hours and costs.

16. **For collections of information whose results will be published, outline plans for tabulation, and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection information, completion of report, publication dates, and other actions.**

²¹This ICR retains the previous ICR cost estimates of a medical examination \$187, and the air monitoring sample of \$20.00

THE COTTON DUST STANDARD (29 CFR 1910.1043)
1218-0061
August 2016

OSHA will not publish the information collected under §1910.1043.

- 17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be appropriate.**

OSHA lists current valid control numbers in §§1910.8, 1915.8, 1917.4, 1918.4, and 1926.5 and publishes the expiration date in the Federal Register notice announcing OMB approval of the information collection requirement. (See 5 CFR 1320.3(f)(3)). OSHA believes that this is the most appropriate and accurate mechanism to inform interested parties of these expiration dates.

- 18. Explain each exception to the certification statement.**

OSHA is not requesting an exception to the certification statement.

B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS

This Supporting Statement does not contain any collection of information requirements that employ statistical methods.
