Submission Date: January 23, 2021

**Circumstances of Change Request for OMB 0920-1118**

CDC requests approval for a non-substantive change to OMB Control No. 0920-1118: Emergency Zika Package V: Assessment of Interventions Intended to Protect Pregnant Women in Puerto Rico from Zika virus Infections.

These changes are being made to improve comprehension of questions and flow of the interview. The project protocol has not changed. IRB review is not required.

Estimates of annualized burden hours for this change request remain the same. Average length of interviews is coming in well under the time allotted for each of the interviews so no additional burden hours are needed. The burden estimate for the forms included in OMB Control No. 0920-1118 is 892 hours for the overall assessment.

**Description and Justification of Changes**

*Attachment C: Initial Telephone Interview*

Changes to the questionnaire were based on two waves of information collection that have resulted in identifying patterns from open-ended response options (which now can be added to the list of response options) and on-going training and feedback with interviewers to ensure that scripts flow well and are written clearly in order to minimize interviewer explanations, if the question was not understood by the pregnant woman, which can unintentionally influence the answer the respondent provides. On August 11, the bi-lingual behavioral science team leader and the team of interviewers met to reflect on the first two waves of interviews and to review and refine/revise instruments to improve their cultural competency, clarity, flow, and question's intent/purpose. We believe proposed changes are necessary to improve the quality and utility of the information collected.

Below we describe changes to the questionnaire and provide the rationale for changes. Additionally, a table is provided which shows the old version of questions side by side with the new version.

- Introductory script: We edited text to clarify that the interviewers are from the Puerto Rico Department of Health and not CDC, to ask how many months pregnant they are to so that our quotas for pregnancy trimester are more accurate, to shorten introduction, and improve clarity of language.
- Added a question before question 1: We have relied on WIC data to tell us about the pregnancy trimester of participants and have found inaccuracies in their data. Because we have a quota sample by pregnancy trimester, we need to ask this question to be sure that we fill our quota accurately and categorize respondents in the correct pregnancy trimester.
- Questions 1, 4, 6, 8, 17, 18, 19, 20, 22, 28, 41, 46, and 47: Response options were added based on qualitative analysis of open-ended and “other, please specify” responses from interviews completed to date.
- Moved description of Zika Prevention Kits to the beginning of section 3 and removed the follow-up question to question 15, “what have you heard” and the direction to capture verbatim responses.
- Question 16: Deleted because almost all women had received a Zika Prevention Kit from WIC and interpreted this question to mean does she know where to go to get another free Zika Prevention Kit. There are no plans to give out multiple kits to pregnant women.
- Question 21: Edited the question stem to be clearer and flow better. Also, deleted the “least important” response option because pregnant women said that they are all important and would not provide an answer.
- Questions 24 & 25: We added two response options that represent items that educational materials in the Zika Prevention Kit stress as important but that are not items currently included in the kit, but that are under consideration for inclusion (e.g., a coupon for clothing or screens)
- Question 26: Incident managers want more information about why pregnant women are reporting “never or almost never” use of items included in the kit. So, interviewers will capture verbatim responses.
- In Spanish interview scripts only, we moved section 5 about insecticide services to the end of the interview to address concerns that pregnant women might end the interview because of the negative news coverage and protests about NALED use and aerial spraying. So the section after Zika Prevention Kit is now mosquitoes and the environment followed by risk perceptions followed by necessary actions to protect pregnant women followed by insecticide services. So, questions 1-28 are the same in both instruments but after that the sequence changes to put the questions about insecticide services at the end.
- Added Questions 34 (a) English/Question 50A in Spanish version: Added an opinion question about the importance of offering insecticide spraying services to Pregnant women in Puerto Rico.
- Added Question 31 (a) English/Question 47 in Spanish version: Added question about acceptance of insecticide services in addition to the question about desire for the services. One reflects motivation (want) while the other reflects a decision (acceptance).
- Question 49 (Question 43 in Spanish version): Edited the question stem to be clearer.
- Closing statement: Shortened the thank you statement.

Attachment D: Follow-up Telephone Interview

Below we describe changes to the questionnaire and provide the rationale for changes. Additionally, a table is provided which shows the old version of questions side by side with the new version.

Introductory script: We edited text to clarify that the interviewers are from the Puerto Rico Department of Health and not CDC, to confirm that they are still pregnant, [added question – “Are you still pregnant”], to shorten the introduction, and to improve clarity of the language.

Q4: Edited question 4 to remove the explanation of oral sex as “mouth-to penis.” Interviewers said that this explanation was not necessary.

Added Question 4 (a): Incident managers want to know how many condoms to put in Zika Prevention Kits, but we have been unable to find data on sexual activity levels of pregnant women in Puerto Rico. Adding this question will guide decisions on how many condoms should be included in Zika Prevention Kits. A recent qualitative assessment with pregnant women in Puerto Rico showed that they are embarrassed to purchase them or pick them up from places where they may be seen obtaining them.

Edited the introductory sentence before question 14 to more accurately describe the groups we will be asking about. Instead of saying we are asking about what the “community” may or may not be doing, we will ask, what “others” may or may not be doing to prevent Zika.

Questions 14a, 15a, 16a, and 17a: During the first wave of follow-up interviews women were asked only about the “satisfaction” of the actions of family, neighbors, municipalities, and the Department of Health. Interpreting this information without knowing, from the pregnant women’s perspective, are the actions they are taking, is not helpful. These questions will offer more specific feedback to each of these groups about the actions that are driving satisfaction.

<b>Initial Telephone Interview Guide – Attachment C</b>	
<b>Current Question</b>	<b>Requested Changes - 1/23/21</b>
	How many months pregnant are you?  _____ months (write number)
Question 1. What have you heard about Zika? ( <i>Do not read, tick all mentioned</i> )  Pregnant women should try not to get it It causes microcephaly or brain defects in babies People get it from mosquitoes, so should avoid getting bitten It can be transmitted by sex from a man to a woman	What have you heard about Zika? ( <i>Do not read, tick all mentioned</i> )  Pregnant women should try not to get it It causes microcephaly or brain defects in babies People get it from mosquitoes, so should avoid getting bitten It can be transmitted by sex from a man to a woman People in Puerto Rico are getting infected with Zika – the

<p>People in Puerto Rico are getting infected with Zika – the virus is here  Most people who have it, don't know it  It causes fever, rash, and conjunctivitis  There is no treatment for Zika  There is no vaccine for Zika  It can be life-threatening – can cause paralysis, GBS  Other, please specify:  Refused [DO NOT READ]</p>	<p>virus is here  Most people who have it, don't know it (can have Zika and have no symptoms)  It causes fever, rash, and conjunctivitis  There is no treatment for Zika  There is no vaccine for Zika  It can be life-threatening – can cause paralysis, GBS  People should wear repellent  People should wear clothing that covers  People should eliminate standing or accumulated water  People should put screens on windows and doors  It is like Dengue and Chikungunya  It is dangerous  Haven't heard anything  Other, please specify:  Refused [DO NOT READ]</p>
<p>Question 4. In your opinion, how likely do you think it is that you will be infected with Zika virus during your pregnancy (or while you are pregnant)?</p> <p>Extremely unlikely  Unlikely  Neutral - Neither unlikely nor likely  Likely  Extremely likely  Refused [DO NOT READ]</p>	<p>In your opinion, how likely do you think it is that you will be infected with Zika virus during your pregnancy (or while you are pregnant)?</p> <p>Extremely unlikely  Unlikely  Neutral - Neither unlikely nor likely  Likely  Extremely likely  I already have Zika [DO NOT READ]  Refused [DO NOT READ]</p>
<p>Question 6. What actions have you taken to protect yourself from getting infected with the Zika virus since you found out you were pregnant? (<i>Do not read, tick all mentioned</i>)</p> <p>Used mosquito net at night  Used mosquito net during the day  Used mosquito repellent or spray on your body  Worn clothes that cover my arms and legs  Used mosquito coil/light fires to keep mosquitoes away  Used a condom/had my partner use a condom in all sexual relations  Abstained from sexual intercourse  Cleaned/scrubbed water source/storage unit/water container(s)</p>	<p>What actions have you taken to protect yourself from getting infected with the Zika virus since you found out you were pregnant? (<i>Do not read, tick all mentioned</i>)</p> <p>Used mosquito net at night  Used mosquito net during the day  Used mosquito repellent or spray on your body  Worn clothes that cover my arms and legs (long sleeved shirts and pants)  Used mosquito coil/light fires to keep mosquitoes away  Used a condom/had my partner use a condom in all sexual relations  Abstained from sexual intercourse</p>

<p>Put cover(s) over the water source/storage unit/water container(s)  Removed accumulated water  Sprayed or fumigated inside my home  Sprayed or fumigated outside of my home  Used larvicides (like mosquito dunks)  Put screens on windows and doors  Cleaned household environment  Drank clean water  Washed I clean water  Prayed to God  No answer  Other, please specify: _____  Refused [DO NOT READ]</p>	<p>Cleaned/scrubbed water source/storage unit/water container(s)  Put cover(s) over the water source/storage unit/water container(s)  Removed accumulated water  Sprayed or fumigated inside my home  Sprayed or fumigated outside of my home  Used larvicides (like mosquito dunks)  Put screens on windows and doors  Cleaned household environment  Drank clean water  Washed I clean water  Prayed to God  No answer  Wore light-colored clothing (no dark clothes)  Don't go outside at all  Don't go outside at night  Closed windows and doors  Cut grass  Used air conditioning  Go to doctor  Got tested and/or got my partner tested for Zika  Looked for more information about Zika  Other, please specify: _____  Refused [DO NOT READ]</p>

<p>Description: <i>Indoor residual spraying (IRS) is when specially trained professionals spray insecticide inside of the home in and on the places that mosquitoes like to rest – usually dark and moist places. Examples of places are under tables, behind furniture, under beds and cabinets with sinks, and by dirty laundry. The spraying can be done anytime during the day and usually will kill mosquitoes for about three months. IRS is most effective when most houses in a neighborhood have their homes sprayed.</i></p>	<p>Description: <i>Indoor residual spraying (IRS) is when specially trained professionals spray insecticide inside of the home in and on the places that mosquitoes like to rest. The spraying can be done anytime during the day and usually will kill mosquitoes for about three months. IRS is most effective when most houses in a neighborhood have their homes sprayed.</i></p>
	<p>In your opinion, how important is it to offer insecticide spraying services to pregnant women in Puerto Rico?</p> <ul style="list-style-type: none"> <li>Not at all important</li> <li>Slightly important</li> <li>Neutral (not important but not unimportant)</li> <li>Somewhat important</li> <li>Very important</li> <li>Don't know/not sure</li> <li>Refused</li> </ul>
<p>Question 41.
