B.1 Universe, Sample Design, and Estimation

Section B.1.1 includes information on the study universe of interest. Section B.1.2 describes the sampling plan implemented in the national study. Section B.1.3 explains the survey weight calculations. Section B.1.4 provides information about estimation methods. Section B.1.5 discusses the target sample sizes set for the national study and the precision implications. Section B.1.6 addresses potential nonresponse bias analysis.

B.1.1 Universe

The universe for the EDSCLS benchmark study includes all grade 5-12 students in regular public-schools in the 50 States and the District of Columbia and teachers and principals within their school. These students, and teachers and principals serving these students, are regarded as eligible for the EDSCLS benchmark. Those in detention/corrections/treatment centers, homebound/hospital schools, and virtual schools are excluded from this benchmark. Schools run by the Bureau of Indian Education and Department of Defense are also excluded from this benchmark. However, the study oversampled schools with relatively large percentages (at least five percent¹) of American Indian/Alaska Native non-Hispanic (AM²) student enrollment by a factor of two to make sure this population is well-presented in the sample. The size of the student population is estimated to be about 28,641,600, and the size of the school population is estimated to be about 78,600 (based on information from the Department of Education's 2013-14 Common Core of Data or CCD).

B.1.2 Sample Design

The sample design for the EDSCLS national benchmark study produces a nationally representative sample of grade 5-12 students, teachers, and principals in the public schools serving these students. The national benchmark study used a stratified probability design. The target school population was divided into four strata: a primary school stratum³, a middle school stratum, a high school stratum, and a combined school stratum. The schools with eligible students are classified in one of the four school strata based on the lowest and highest grades they offered, as reported in CCD, using these rules:

- Primary school stratum: lowest grade: PK through 04; highest grade: 05 through 08;
- Middle school stratum: lowest grade: 05 through 08; highest grade: 05 through 09;
- High school stratum: lowest grade: 09 through 12; highest grade: 09 through 12; and
- Combined school stratum: any other configuration not falling within the above three categories.

To ensure that we selected a representative sample, schools were further stratified by high percentage of AM student enrollment (two categories: higher/lower percentage than five percent), urbanicity, and quartile eligible enrollment size (student counts in grades 5-12) with the exception that the urbanicity was not used for the high percentage of AM student enrollment strata because the cell size would become too small. Urbanicity was based on an existing CCD locale variable that categorizes schools into four strata: urban, suburban, town, and rural. High percentage of White non-Hispanic student enrollment (two

¹ This criterion was used to oversample schools with relatively large percentage of American Indian/Alaska Native non-Hispanic students in the National Indian Education Study (NIES) (Grigg, Moran, & Kuang, 2010).

² This abbreviation AM is used for American Indian/Alaska Native non-Hispanic students in the Common Core of Data (CCD).

³ Schools with highest grade lower than 5th grade are not part of the target school population because these schools do not have any eligible students.

categories: higher/lower percentage than the median percentage), and high percentage of student enrollment eligible for free or reduced-price lunch (two categories: higher/lower percentage than the median percentage) were used as sorting variables in the sample selection process to make the frame implicitly stratified on these variables. State, district, and school ID were also used to sort the school list so that the schools are further implicitly stratified geographically.

Because a separate estimate is desired for each school level and the total sample size is only 500, equal allocation across school levels was implemented. Proportional allocation was applied for each stratum within each school level, but the total number of schools was multiplied by a factor of two for the high percentage of AM student enrollment strata so that the chance of schools in these strata being selected was twice as high as schools in the low percentage of AM student enrollment strata. Schools were systematically sampled with probability proportional to measures of size within the stratum by school level, high percentage of AM student enrollment, urbanicity, and eligible enrollment size quartile. Before selection, schools in each stratum were sorted by high percentage of White non-Hispanic student enrollment, high percentage of student enrollment eligible for free or reduced-price lunch, state, district, and school ID. The measure of size was total enrollment in eligible grades.

1,000 schools were drawn into the sample, with 714 of them selected to be prioritized for recruitment (with active follow up with non-respondents). We hoped to achieve 70 percent response rate from the primary batch of 714 sampled schools and expected to obtain 500 responding schools; however, the first round of recruitment indicates that the overall response rate is likely to be lower than 70 percent and we have decided to follow up with all 1,000 schools (see section B.2.5 below). Within each sampled school, to give schools the choice to reduce burden, in addition to the school principal, schools will be given a choice to administer the EDSCLS surveys to a sample of the school's students in grades 5, 7, and 11 and teachers in grades 5, 7, and 11, or to a universe of the school's students in grades 5-12, teachers, and noninstructional staff. If the school chooses the sample option, we will only randomly select one class of students and two teachers from the referent grades. If the sampled school would like to collect data from all students and instructional and noninstructional staff for their school report, we will accommodate that decision and all their data will be used in the estimations. We expect that 80 percent of contacted students, teachers, and noninstructional staff (including principals) will respond in the participating schools.

The sample design did not account for other NCES surveys in the field at the same time as the EDSCLS. Selecting a sample that avoids or minimizes overlap would unnecessarily complicate the sampling design and would require complex computations of probabilities prior to sample selection, as well as complex weighting after data collection.

B.1.3 Survey Weights

Respondent weights will be provided so that the weighted data will represent individuals in the populations. The final school weight for the respondent school will be comprised of a sampling base weight and an adjustment for school nonresponse. Weighting adjustment cells will be determined based on bias analysis results from the EDSCLS data in order to create the adjustment for nonresponse. The final person weight for respondents will be the product of the final school weight, person sampling weights, and an adjustment for individual nonresponse. If needed, the final weight will be raked so that the sum of the weights matches the population totals derived from the latest CCD public school universe file.

B.1.4 Methods for Variance Estimation

Standard errors of the estimates will be computed using a Taylor series linearization method that will incorporate sampling weights and sample design information.

B.1.5 Sample Sizes and Precisions

The national benchmark study will collect data from a nationally representative sample of students and staff in 500 public schools. Based on an assumed standard deviation of 100 for the scale score by design, the mean student-level scale score for each grade in the referent grades 5, 7, and 11, assuming an average classroom size of 20, an 80 percent student response rate, and an intraclass correlation of 0.3 among students in the same classroom, will be estimated with a 95% confidence interval of ± 8 score points, or 0.08 standard deviation units for the mean. Similarly, based on an assumed standard deviation of 100 for the scale score by design, the mean teacher-level scale score for each grade, assuming an intraclass correlation of 0.1 among teachers in the same grade, will be estimated with a 95% confidence interval of ± 11 score points, or 0.11 standard deviation units for the mean. If we compare the scores of two grades, the sample sizes can detect a difference of 23 in mean scale scores with 80% power at 95% level of confidence. These calculations are based on a simple random school sample assumption. The national benchmark study has some design features (e.g., the unequal probability sampling design) that can affect the precision of the estimates. The confidence intervals could be inflated by a factor of 1.2–1.6.

B.1.6 Nonresponse Bias Analysis

School nonresponse: To identify characteristics associated with school nonresponse, a multivariate analysis will be conducted using a categorical search algorithm called Chi-Square Automatic Interaction Detection (CHAID). CHAID divides the data set into groups so that the school response rate within cells is as constant as possible, and the school response rate between cells is as different as possible. Since the variables considered for use as predictors of response must be available for both respondents and nonrespondents, demographic variables from the CCD sampling frame will be used in the CHAID analysis. The magnitude of school nonresponse bias and the likely effectiveness of statistical adjustments in reducing that bias will be examined by comparing estimates computed using nonresponse adjusted weights to those computed using unadjusted base weights.

Individual nonresponse: We will conduct comparisons between respondent characteristics to known population characteristics from CCD. Similar to school nonresponse, the magnitude of individual nonresponse bias will be examined by comparing estimates computed using nonresponse adjusted weights to those computed using unadjusted base weights. This will provide an indication of the likely effectiveness of statistical adjustments in reducing nonresponse bias.

B.1.7 Nonresponse Follow-up Study

The nonresponse follow-up study was a qualitative study to provide information for improving recruitment procedures for the 2016–17 data collection. Random subsamples of 20 schools that agreed to participate in the 2015–16 data collection, 60 schools that declined to participate, and 100 that did not respond to the survey request were selected. To minimize burden and produce timely results, interviewing will end when a quota of interviews have been completed within each subsample. The quotas for those schools that agreed to participate, those that declined, and those that never responded will be 10, 20, and

30, respectively. A qualitative analysis will be conducted based on the results for these interviews, and recommendation for improving the recruitment process will be made.

B.2 Procedures for the Collection of Information

The data collection methods for the EDSCLS national benchmark survey require contacting sampled schools and their districts for their support. Once a school agrees to participate in the national study, the school will be asked to designate a school coordinator to assist in the materials distribution and data collection at the school. The EDSCLS team will also work with school coordinators to help maintain response rates for the survey.

Major steps of the EDSCLS national study data collection include: drawing the school sample; contacting school principals and district superintendents; mailing data collection materials to school coordinators; and managing and monitoring data collection with school coordinators.

B.2.1 Drawing the Sample

The sample of schools was drawn and recruitment for the national study began in April 2016. The schools in the sample were researched by EDSCLS staff prior to the recruitment effort, to ensure that accurate mailing and contact information is recorded. Recruitment has been conducted using different communication methods, and will consist of up to four rounds of mail packages, four rounds of phone contact attempts, and up to four rounds of email or fax follow ups.

The official recruitment effort began with an advance letter being sent to all schools in the sample. This letter explained the scope of the survey, and informed the recipient that a formal invitation to participate would arrive within the week.

The random subsamples for the nonresponse follow-up study were drawn from the sample in the 2015–16 data collection, based on the dispositions codes from the recruitment that took place earlier in the 2015-2016 school year.

B.2.2 Recruitment Mailing to Principals or Superintendents

A recruitment package was sent to all sampled schools within the week of sending the advance letter. This package contained a message from NCES Acting Commissioner Peggy Carr, EDSCLS flyer, FAQ document, summary of duties to be executed by the site coordinator, school information form to be filled out by the coordinator, and a pre-labeled return envelope. Contact information for both ED and AIR was listed in the recruitment materials, and a devoted AIR email address and phone line were provided for any queries or comments that may arise. Staffing levels ensure that at least one team member is available at all times during planned hours of operation (9am to 5pm, Eastern Time) to answer email and phone inquiries.

Additionally, a message from NCES Acting Commissioner Peggy Carr was sent to the superintendent of each district that has at least one school in the EDSCLS sample. The letter informed the superintendent of the scope and intent of the survey.

The survey recruitment materials include a number of personalized features that are recommended for a better response rate (Dillman, 2011), including exact titles and names for the survey packages. Also, in the second mailing of the recruitment package to the schools, a hand-written Post-It note will be included on the invitation letter, thanking the principal for their consideration. Copies of all the recruitment materials to schools and districts are included in Appendix A.

B.2.3 Recruitment Emails

Within a week of sending the recruitment package via mail, an identical package will be assembled and sent via email to the principal of each school. If an email address is unavailable, the documents will be faxed to the school.

B.2.4 Follow-up Calls

For each round, approximately two weeks after sending the email message, we will initiate phone calls to confirm that schools have received the recruitment package, and to ask if they are willing to participate in the national study. A phone script will be utilized, with prompts and cues to follow depending on the school representative with whom the EDSCLS staff member is speaking. Multiple attempts to contact the school will be made during each round of calls.

B.2.5 Protocol for Additional Follow-Up Efforts

During the first round of recruitment, assuming a 70% participation rate, follow-up recruitment efforts focused on a primary batch of 714 or so schools. All 1,000 schools received the initial recruitment package, after which time, initial email, phone call, and all subsequent rounds of contact efforts were limited to the prioritized batch of 714 schools. Since the team does not expect to recruit a minimum of 500 schools from the primary batch of 714, follow-up recruitment efforts with the remaining 286 schools will recommence in the second round of recruitment. Data will be collected in all schools that agree to participate.

The initial round of mailers, emails, and calls concluded in June 2016. Three more rounds of mailers, emails, and calls have been planned for the follow-up school recruitment. The second round of recruitment efforts will commence in July 2016, the third round in October 2016, and the optional fourth round in December 2016. If response rates are insufficient, we may opt to use FedEx envelopes for the last mail packages, to ensure they are hand-delivered to a point of contact at each school.

B.2.6 Refusal Conversion for Schools That Will Not Participate

If at any time during data collection a school expresses strong concerns about confidentiality, these calls will be directed to the AIR Project Director (and possibly NCES) for formal assurance. All mailed refusal conversion materials will include the project's toll-free number as well as the number for the Project Director. AIR will delegate a staff member who is best-equipped to pursue soft refusal conversions.

B.2.7 Tracking of School and District Responses

All contact and mailing information, communication efforts, participation acceptances and declines, and scheduled survey administration timeframes have been tracked in a Microsoft Access/Excel database. This database contains a number of search and filter options, to more easily track recruitment efforts and responses from schools and districts. All communication attempts are time-stamped.

Recruitment efforts for special districts have also been maintained in the Microsoft Access/Excel database, cataloguing such items as the name of the district, response and follow-up status, anticipated decision date, any relevant notes, as well as contact information for the particular district.

Similarly, recruitment efforts for the nonresponse follow-up study have been maintained in a database. Each record contains the school name, person contacted, name of the interviewer, time of the call, and any relevant notes.

B.2.8 Data Collection and Monitoring

After a survey coordinator is appointed for a school, the EDSCLS team will request information about the number of eligible grades in the school and a list of classes (grade 5 and above) to assist the sampling of students and teachers in schools that choose administering the EDSCLS surveys to a sample rather than a universe of respondents. An incentive iPad tablet computer will then be delivered to the school to assist in the data collection. The EDSCLS team will work with school coordinators to direct respondents to the self-administered web survey. Usernames will be disseminated through the school coordinator to respondents, and instructions will be provided to the coordinator on how data collection can be managed at the school level, including appointing and training proctors to manage administration of the surveys to students. The EDSCLS team will work with the coordinator to ensure satisfactory response rates are achieved.

Data collection for the nonresponse follow-up study will be done using computer assisted telephone interviewing (CATI). A maximum of 7 calls will be made to each of the sampled schools. The disposition of each call will be tracked in a Microsoft Access/Excel database.

B.2.9 In-Person Follow-Up Efforts

If contact attempts with schools prove to be difficult, a series of in-person school visits will be initiated at the end of the second recruitment cycle in September of 2016. While it is cost-prohibitive to conduct a series of nationwide in-person school visits, AIR will recruit colleagues to visit a number of sampled schools within a fifty mile radius of their respective offices. These in-person attempts will help shed light on *why* so many schools were unresponsive to mail, email, and phone call contact attempts, which will help inform our third cycle of contact attempts.

B.2.10 Special Handling District Recruitment Efforts

A number of schools drawn in the 2017 EDSCLS Benchmark sample belong to school districts that require additional application processes or materials to be sent to the district for consideration. Before we can solicit the participation of these particular schools, each district will have to approve an EDSCLS research request. These special handling districts require completion of a research application before they will allow schools under their jurisdiction to participate in a study. Currently, we have 108 special handling districts in the sample.

Districts have been identified as ‘special handling districts’ based on what is found in online sources. The application processes for each individual district were obtained either through direct contact via phone or e-mail or through the district website. Most districts require that the following documents be provided in the research request packet:

- Study proposal with a timeline of the study
- Study Abstract and/or Executive Summary
- IRB approval (EDSCLS is exempt from seeking IRB approval)
- Consent form

- Project Director’s resume
- Copy of any communications that would be sent to participants
- Copy of questionnaires

Some districts require a processing fee (\$25-\$250) before the research proposal can be evaluated.

District application packages were prepared according to their specific requirements in April 2016.

Special handling district recruitment will continue through the summer of 2016. Within two weeks of having submitted an application, follow-up contact with each district will commence, to confirm the receipt of our application packet, as well as an intended date by which their review board will have made a decision on our application. A round of emails will be sent to the point of contact at each district. If emails are not returned within a week, a follow-up phone call will be placed.

Follow-up efforts with nonresponding districts will continue every two weeks, until contact has been established with each one. Upon confirming an intended decision date, further contact with the district will be halted, unless prompted to submit further documentation, clarify a particular point in the application, et cetera. If the intended decision date passes without word from the point of contact at the district, follow-up efforts will re-commence, until a new decision date can be noted in our records.

Throughout the recruitment process, previously unknown special handling districts may be brought to our attention, as sample schools notify us of district approval processes. When this is the case, an application will be prepared for the new special handling district, which will be catalogued in our tracking document.

Upon receipt of a decision from a district, the tracking document will be updated to reflect the change. For districts that approved our research, the AIR team will begin contacting their respective schools, and will include the letter of approval from the district in school recruitment materials.

B.3 Methods to Maximize Response Rates

NCES is committed to obtaining a high response rate in this survey. The EDSCLS data collection design incorporates a number of features to maximize response rates.

Response status tracking. A key to achieving a high response rate is the tracking of the response status of each sampled school, with telephone follow-ups of those schools that do not respond promptly to the invitation. The survey responses will be monitored in the data collection tool. The EDSCLS platform will be able to generate real-time statistics on the response status of each school and respondent groups in each school, which will allow the team to take tailored actions to achieve high response rates.

Engaging school interest and cooperation. The content of recruitment letters and frequently asked questions (FAQs) are focused on communicating the legitimacy and importance of the national study. During the pilot test and other early stages of the development of the survey platform, schools showed great interest in the EDSCLS. We also plan to provide each participating school a tablet to help with data collection. A tablet will enable schools to see how the instruments will display on different mobile devices and to allow survey participation during school meetings or events to help encourage participation. More importantly, for noninstructional staff or other staff who don’t regularly use computers for their work, a tablet will provide easy access to online surveys. We have received feedback

from some districts in the pilot test that tablets were great incentives to obtain their principals' buy-in to the pilot data collection.

School survey coordinator. The school survey coordinator is the key to achieving maximum response rates. The EDSCLS team has successful experience in working with school survey coordinators in the pilot test and earlier related studies. The team will follow similar procedures as in the pilot test to identify and work with the school survey coordinators in the national data collection.

Nonresponse follow-up study. Calls will be made at different times of the school day to increase the likelihood of reaching the designated respondent. Messages will be left at each call that will include the purpose of the call, a telephone number, name of the interviewer, and a request to return the call. Once the quota of completed interviews is reached for each group, no more calls will be made to the remaining schools in that group.

B.4 Tests of Procedures

In the summer of 2014, one-on-one cognitive interviews were conducted on the new and revised items with 78 individual participants including students, parents, teachers, principals, and noninstructional staff from the District of Columbia, Texas, and California. In addition to cognitive interviews, usability testing of the survey platform was performed with 32 individual participants including students, parents, teachers, principals, and noninstructional staff from the District of Columbia, Maryland, and Virginia. Changes to both the survey items and survey platform were made based on these interviews and testing.

The pilot test of the EDSCLS took place from March to May of 2015. A convenience sample covering 50 public schools that varied by region, locale racial composition, enrollment size, and percentage of student enrollment eligible for free or reduced-price lunches participated in the pilot test. All survey questionnaires were administered online through the EDSCLS platform, and pilot test results were used to refine the EDSCLS survey items and to determine which items to drop. Additionally, the following procedures have been used and tested in the pilot test of EDSCLS and will be used in the benchmarking study:

Recruitment. The pilot test sample included schools that varied in characteristics expected to be related to response propensity and level of technology infrastructure including region, locale, racial composition, enrollment size, and percentage of student enrollment eligible for free or reduced-price lunches. This allowed us to determine which kinds of schools might have the most challenges in administering EDSCLS and the nature of those challenges. This resulted in our plan to start the sampling and recruiting early for the benchmarking study to allow enough preparation time for a variety of schools to participate. Getting ahead of the original planned schedule will also avoid overlapping of the survey window with the state testing windows, reducing the strains on the resources the schools require to conduct successful data collections. During the 2015–16 data collection, the recruitment was not able to begin until the end of October, which proved to be too late in the school schedule to recruit successfully. For the 2016–17 data collection, we have begun recruitment in April 2016. Letters will be followed up with phone calls and emails to make sure schools have received the materials and their questions are answered. Where possible (e.g., schools in proximity of AIR offices), we will send field staff to follow up with contacted schools.

Mailing data collection materials. Once the school, district, or state express an interest, AIR will request and record the contact information of survey administrators at each site and provide information packages and training to the district/school coordinators through a variety of media, including print materials,

telephone conference calls, and virtual meetings in order to ensure fidelity of survey administration. Similar procedures will be followed for the benchmark study.

Incentive delivery. Participating schools were offered a tablet or netbook computer as a way to incentivize participation and assist in the implementation of the survey. EDSCLS support staff put PDF copies of the user manual on the desktop of each device, and set the internet browser home page to the EDSCLS Safe Supportive Schools website before shipping the devices to their intended recipients. A similar procedure will be followed for the benchmark study.

Regular follow-up and support to data collection at each site. EDSCLS support staff were assembled to share the load of the administrative and technical assistance responsibilities during the platform installation, survey administration, and data collection process at all participating sites⁴. Support staff monitored the schoolclimate@air.org email inbox, as well as the toll-free hotline, both of which were identified in school contact materials. Support included trouble-shooting the administration functions of the platform, following up with school coordinators regarding their data collection efforts and ongoing experiences, and providing instructions on how to read the survey status reports. Daily summaries of assistance provided were circulated via email amongst all staff members so that common problems and standard solutions could be identified. Although the assistance needed in the benchmark study will largely be different from the assistance needed in the pilot test because the data collection is managed by NCES/AIR instead of local education agencies, similar procedures will be followed to ensure timely communication between the team and the schools participating in the benchmark study.

Record keeping. In addition to daily summary reports shared among support staff, detailed records of documented issues were recorded in an excel spreadsheet log. The nature of the issue, the assistance provided, whether or not the issue was resolved, and the staff member providing the assistance were all recorded. A detailed weekly summary was created and disseminated among the entire team, covering everything that was addressed throughout the week. Although the problems in the benchmark study may be different from those in the pilot test, similar procedures will be followed to help timely identification of common issues and effective solutions.

B.5 Individuals Responsible for Study Design and Performance

Several key staff are responsible for the study design and performance. From NCES they include: Isaiah O'Rear, Marilyn Seastrom, and Chris Chapman, and from AIR: Yan Wang, Cong Ye, Avi, Singh, Sandy Eyster, and Clyde Tucker.

⁴ The technical support for the released platform is not part of the benchmark study. OSHS is currently exploring the options to provide support to schools, districts, and states that will be utilizing EDSCLS in the future.

C. Justification Tables

In the justification tables below, for each item, the Source column indicates from which survey or group the item originated (see source key below). The Item Source Type column indicates whether the original item was part of the given survey’s validated scale (item from validated scale) or not part of a scale (other extant item), in each case the item’s wording in that survey is provided under Wording in Source Survey, or whether it was a new item drafted by the EDSCLS advisory groups (new item). EDSCLS wording is the version of the item used in the pilot test and in the final EDSCLS instruments. Because the goal of the pilot test was to remove poor performing items, no wording changes were made after the pilot test to any of the items selected for the final EDSCLS. For each EDSCLS instrument, below the table providing the items selected for the final EDSCLS, another table lists the items that were dropped after the pilot test.

As indicated in section A.1 of Part A, after the pilot test, one new item was added to the final EDSCLS. This item was requested by OSHS in June 2015 because school communities nationwide have identified sexual violence and/or teen dating violence as an issue that students and schools are increasingly facing, and EDSCLS can help obtain the needed data on the prevalence of sexual and teen dating violence. As reflected in tables below, “The following types of problems occur at this school often: sexual assault or dating violence” was added to the two staff surveys (Isafpsaf143, Nsafpsaf147).

C.1 Student EDSCLS Item Justification Table

Item ID	Source	Item Source Type	Wording in Source Survey	EDSCLS Wording	Justification for Inclusion in EDSCLS
Sengclc1	S3: MD	Item from validated scale	All students are treated the same, regardless of whether their parents are rich or poor. Strongly Agree, Agree, Disagree, Strongly Disagree	All students are treated the same, regardless of whether their parents are rich or poor. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengclc2	S3: MD	Item from validated scale	Boys and girls are treated equally well. Strongly Agree, Agree, Disagree, Strongly Disagree	Boys and girls are treated equally well. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengclc3	S3: MD	Item from validated scale	The school provides instructional materials that reflect my culture, ethnicity, and identity. Strongly Agree, Agree, Disagree, Strongly Disagree	This school provides instructional materials (e.g., textbooks, handouts) that reflect my cultural background, ethnicity, and identity. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengclc4	S3: LA	Other extant item	Adults at this school treat all students with respect. Strongly Disagree, Disagree, Neither Disagree Nor Agree, Agree, Strongly Agree	Adults working at this school treat all students respectfully. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengclc7	S3: LA	Other extant item	There is a lot of tension in this school between people of different cultures, races, or ethnicities. Strongly Disagree, Disagree, Neither Disagree Nor Agree, Agree, Strongly Agree	People of different cultural backgrounds, races, or ethnicities get along well at this school. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengrel9	S3: AZ	Item from validated scale	Teachers understand my problems. Strongly Agree, Agree, Neither, Disagree, Strongly Disagree	Teachers understand my problems. Strongly Agree, Agree, Disagree, Strongly Disagree	Item was tested in the pilot and performed well.
Sengrel11	S3: AZ	Item from validated scale	Teachers are available when I need to talk with them. Strongly Agree, Agree, Neither,	Teachers are available when I need to talk with them. Strongly Agree, Agree, Disagree,	Item was tested in the pilot and performed well.

C.1.1 Student EDSCLS Dropped Item Table

Item ID	Item Wording
Sengclc5	There are examples of different racial, ethnic, or cultural backgrounds in the class lessons at this school.
Sengclc6	Adults working at this school have disrespected students because of their race, ethnicity, or cultural background.
Sengclc8	Students from different cultural backgrounds get along well at this school.
Sengrel10	Adults working at this school seem to take a real interest in my future.
Sengrel13	Students get along well with teachers.
Sengrel15	At this school, there is a teacher or some other adult who notices when I am not there.
Sengrel16	Teachers at this school help us children with our problems.
Sengrel19	Students help one another.
Sengrel22	Students trust one another.
Sengrel26	When there are events at this school, lots of families come.
Sengpar43	At this school, the principal asks students what their ideas are.
Ssafemo50	Students at this school can tell their teachers if they feel confused about something in class.
Ssafemo51	Students at this school are sensitive to the feelings of other students.
Ssafemo55	I feel close to people at this school.
Ssafemo58	I feel loved and wanted.
Ssafpsaf61	I worry about crime and violence at this school.
Ssafpsaf62	Students at this school are often threatened.
Ssafpsaf66	Students at this school belong to gangs.
Ssafpsaf70	Students at this school damage or destroy school property.
Ssafbul72	Students at this school are often teased or picked on.
Ssafbul77	Students at this school are teased or picked on about their real or perceived sexual behavior.

Item ID	Item Wording
Ssafbul81	Students at this school say mean things to other students when they think the other students deserve it.
Ssafbul78	Adults working at this school make it clear to students that bullying is not tolerated.
Ssafbul79	Students tell adults working at this school when other students are being bullied.
Ssafbul82	Students at this school are often cyber bullied (e.g., receiving a threatening or hurtful message from another student in an email, on a website, on a cell phone, or in instant messaging).
Ssafsub84	At this school, how much of a problem is student drug use?
Ssafsub85b	At this school, how much of a problem is student use of electronic cigarettes?
Ssafsub85	At this school, how much of a problem is student use of tobacco (e.g., cigarettes, chew, cigars)?
Ssafsub86	At this school, how much of a problem is student alcohol use?
Ssafsub87	Students use/try tobacco products while at school or school-sponsored events.
Ssafsub89	Students buy or sell drugs, alcohol, or tobacco products while at school or school-sponsored events.
Ssafsub90	Students are sometimes distracted in class because they are drunk or high.
Ssaferm96	This school has told students what to do if there is an emergency, natural disaster (tornado, flood) or a dangerous situation (e.g. violent person on campus) during the school day.
Senvpenv99	The school buildings are pleasant and well maintained.
Senvpenv101	This school is clean and well-maintained.
Senvpenv103	This school looks nice and pleasant.
Senvpenv104	Overcrowding is a problem at this school.
Senvins108	Other students often disrupt class.
Senvins109	I get distracted from doing schoolwork in my classes because other students are misbehaving, for example, talking or fighting.
Senvins117	My teachers are willing to give extra help on schoolwork if I need it.
Senvins119	I'm really learning a lot in my classes.
Senvins122	The programs and resources at this school are adequate to support students with special needs or disabilities.
Senvphea123	How often do you eat fruit at school?
Senvphea124	How often do you eat vegetables at school?
Senvphea125	How often do you eat breakfast on school days?
Senvphea126	How often do you eat candy at school?
Senvphea127	How often do you drink soda at school?

Item ID	Item Wording
Senvphea128	How often do you go to gym class or participate in other physical activity during the school day (e.g., running, playing sports)?
Senvphea129	How often do you stay after school to participate in sports or other physical activity?
Senvmen131	Adults working at this school are usually willing to make the time to give students extra help.
Senvmen135	Students at this school give up when they can't solve a problem easily.
Senvmen136	Students at this school think it's ok to fight if someone insults them.
Senvdis138	Classroom rules are applied equally.
Senvdis139	Problems at this school are solved by students and staff.
Senvdis140	Students get in trouble if they do not follow school rules.
Senvdis141	School rules are enforced consistently and fairly.
Senvdis144	Adults working at this school encourage students to think about how their actions affect others.
Senvdis145	Adults working at this school assign consequences that help students learn from their behavior.
Senvdis147b	School rules for behavior are strict.
