The 2010 Chronic Conditions is an aggregated file in which each record is a profile or cell defined by the characteristics of Medicare beneficiaries. A profile is defined by all combinations of age category, gender, various chronic conditions, and dual-eligibility status of the beneficiaries. Hence, the number of rows (or records) in the CMS 2008 Chronic Conditions represents the number of unique profiles in the Medicare population. For each profile many claim-related variables are provided in the form of averages.

Each row is a:

Unique Medicare Population Profile

### A Methodological Overview

March 2019

The Office of Enterprise Data and Analytics, within the Centers for Medicare & Medicaid Services (CMS), has developed a set of information products and analytics examining chronic conditions among Medicare fee-for-service beneficiaries. Users can access chartbooks and chartpaks, tabular geographic data reports (data years 2007-2017), an interactive dashboard and atlas (data year 2017), as well as links to publications from the [CMS website](#).
