<p>The ED School Climate Surveys (EDSCLS) are a suite of survey instruments being developed for schools, districts, and states by the U.S. Department of Education's (ED) National Center for Education Statistics (NCES). This national effort extends current activities that measure school climate, including the state-level efforts of the Safe and Supportive Schools (S3) grantees, which were awarded funds in 2010 by the ED's Office of Safe and Healthy Students (OSHS) to improve school climate. Through the EDSCLS, schools nationwide will have access to survey instruments and a survey platform that will allow for the collection and reporting of school climate data across stakeholders at the local level. The surveys can be used to produce school-, district-, and state-level scores on various indicators of school climate from the perspectives of students, teachers, noninstructional school staff and principals, and parents and guardians. The 2017 national EDSCLS benchmark study data collection from a nationally representative sample of schools across the United States to create a national comparison point for users of EDSCLS was last approved in April 2016 (OMB# 1850-0923 v.3) with updates approved in May and July 2016 (OMB# 1850-0923 v.4-5). Data will be collected from a nationally representative sample of 500 schools serving students in grades 5-12 to produce national school climate scores on the various topics covered by EDSCLS. The national statistics will be released in the updated EDSCLS platform to provide a basis for comparison between data collected by schools and school systems and the national school climate. This request is to modify the recruitment plan to address schools' concern about burden and, thereby, to increase the likelihood that a sufficient number of schools will participate in the study.</p>
