(Follow-up for "against it").

ROTATE these two

ROTATE these two

English	Sept 22, 2014- Jan 12, 2015	Jan 13 - Feb 10, 2015
The census, the number of deaths in the U.S. by different diseases, the crime rate, and the (unemployment rate/Consumer Price Index) are examples of federal statistics produced by federal statistical agencies that are part of the federal government. Have you ever *used* federal statistics for study or work?	x	x
Personally, how much trust do you have in the federal statistics in the United States? Would you say that you tend to trust federal statistics or tend not to trust them?	x	x
Why do you say that? (1st, 2nd, 3rd response)	x	x
Please tell me whether you Strongly agree, Somewhat agree, Neither agree nor disagree, Somewhat disagree, or Strongly disagree with the following statements: (Interviewer: Read and rotate FS7-FS14)	x	x
Policy makers need federal statistics to make good decisions about things like federal funding.	x	x
Why do you say that? (1st, 2nd, 3rd response)	x	x
People can trust federal statistical agencies to keep information about them confidential	x	x
Why do you say that? (1st, 2nd, 3rd response)	x	x
Would you say that federal statistical agencies often invade people's privacy, or generally respect people's privacy?	x	x
Why do you say that? (1st, 2nd, 3rd response)	x	x
What, if anything, have you heard recently about Federal Statistics or Federal Surveys? (1st, 2nd, 3rd response)	x	x
Every 10 years, the Census Bureau counts everyone living in the United States by collecting information from each address. For the next census in 2020, how would you prefer to be contacted by the Census Bureau? Would you rather be		x
For the 2020 Census, would you rather the Census Bureau contact you to get your census information OR would you rather have the Census Bureau use information you have provided to other government agencies?		x
For people who do not respond to their census form, do you think it would be better to get their information from their neighbors OR to get their information from other government agencies?		x
Some cell phones are called "smartphones" because of certain features they have. Do you own a smartphone, such as an iPhone®, Android®, Blackberry®, or Windows® phone, or are you not sure?		x

Do you own a tablet computer like an iPad®, Samsung® Galaxy, Motorola® Xoom, or Kindle® Fire? x

If you were to get a new job that asked you to use your own smartphone/tablet would you be willing to use it...

x

To make and receive phone calls for work purposes? x

For work email? x

To download and use apps for your job? x

What concerns you MOST about using your own smartphone/tablet? x

One way the Census Bureau could save money is by asking Census interviewers to use their own devices instead of government devices when they do interviews in people's homes. Would you be strongly in favor of the Census workers using their own devices for collecting data, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it? **(ASKED ONLY OF PEOPLE IN THE WORKFORCE)** x

What are you most concerned about when it comes to Census workers using their own smartphone or tablet for data collection? x

Some people are concerned about their data being stored on personally-owned smartphones or tablets. If you knew that the data was sent directly to the Census Bureau and not stored on the device, would it make you more comfortable with Census workers using personally-owned devices, less comfortable, or would it not make a difference?

x

One way the Census Bureau could save money is by asking Census interviewers to use their own devices instead of government devices when they do interviews in people's homes. Would you be strongly in favor of the Census workers using their own devices for collecting data, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it? **(ASKED OF TOTAL POPULATION)**

What are you most concerned about when it comes to Census workers using their own smartphone or tablet for data collection?

Some people are concerned about their data being stored on personally-owned smartphones or tablets. If you knew that the data was sent directly to the Census Bureau and not stored on the device, would it make you more comfortable with Census workers using personally-owned devices, less comfortable, or would it not make a difference?

One way the Census Bureau could save money is by asking Census interviewers to use their own smartphones or tablets instead of government devices when they do interviews in people's homes. Would you be strongly in favor of the Census workers using their own devices for collecting data, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it? **(ASKED OF TOTAL POPULATION; added the words "smartphone or tablets")**

What are you most concerned about when it comes to Census workers using their own smartphone or tablet for data collection?

Some people are concerned about their data being stored on personally-owned smartphones or tablets. If you knew that the data was sent directly to the Census Bureau and not stored on the device, would it make you more comfortable with Census workers using personally-owned devices, less comfortable, or would it not make a difference?

Every ten years, the United States Census Bureau conducts a nationwide census, or a count of all individuals living in the United States. If the Census were held today, how likely would you be to provide your census information? Would you say you…definitely would, probably would, might or might not, probably would not, or definitely would not?

In general, which of the following comes closest to your views about hiring people for jobs?

The Census Bureau hires temporary employees to visit people's homes to collect census data and to process data back at the offices. I would like to get your views about some potential hiring practices for the Census.

If the Census Bureau considered everyone applying for temporary jobs, including people who had prior criminal convictions, would that make you more likely to trust the Census Bureau, less likely to trust the Census Bureau, or would it make no difference?

(If code 1 in QNSA, read:) If people who are hired by the Census Bureau to process information collected during the census have not been screened for prior criminal convictions, would that make you more or less likely to provide your census information, or would it make no difference?
(If code 2 in QNSA, read:) If people who are hired by the Census Bureau to process information collected during the census have been screened for prior criminal convictions, would that make you more or less likely to provide your census information, or would it make no difference?

(If code 1 in QNSA, read:) If people who are hired by the Census Bureau to conduct interviews at people's homes have not been screened for prior criminal convictions, would that make you more or less likely to provide your census information, or would it make no difference?
(If code 2 in QNSA, read:) If people who are hired by the Census Bureau to conduct interviews at people's homes have been screened for prior criminal convictions, would that make you more or less likely to provide your census information, or would it make no difference?

If the Census Bureau was hiring people to conduct interviews at people's homes, please tell me if each of the following hiring practices would make you more likely to provide your census information, less likely, or if it would make no difference.

(If code 1 in QNSA, read:) If the Census Bureau considered everyone applying for a job, including people who have served time in prison for violent crimes, would that make you more or less likely to provide your census information, or would it make no difference?
(If code 2 in QNSA, read:) If the Census Bureau did not hire people applying for a job if they have served time in prison for violent crimes, would that make you more or less likely to provide your census information, or would it make no difference?

(If code 1 in QNSA, read:) What if the Census Bureau considered everyone applying for a job, including people who have served time in prison for crimes including dishonesty, like fraud?
(If code 2 in QNSA, read:) What if the Census Bureau did not hire people applying for a job if they have served time in prison for crimes including dishonesty, like fraud?
  (Interviewer: Read if necessary:) Would that make you more or less likely to provide your census information, or would it make no difference?)

(If code 1 in QNSA, read:) How about if the Census Bureau considered everyone applying for a job, including people who have served time in prison for sexual crimes?
(If code 2 in QNSA, read:) How about if the Census Bureau did not hire people applying for a job if they have served time in prison for sexual crimes?
  (Interviewer: Read if necessary:) Would that make you more or less likely to provide your census information, or would it make no difference?)

For the next census in 2020, if the Census Bureau got information that you already provided to the Social Security Administration, they may not need to ask you for this information on a questionnaire. If you knew this information was being obtained from the Social Security Administration only to produce statistics, and that your personal information would remain unavailable to anyone outside the Census Bureau, would you be strongly in favor of the Census Bureau getting your information from the Social Security Administration, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it?

Now I will read you some reasons why some people like the idea of the Census getting your information from the Social Security Administration. For each statement, please tell me if this reason would make you strongly in favor of this, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it.

Because some people choose not to respond to the Census, getting information from the Social Security Administration could help the Census Bureau get a better idea of population sizes informing [**(If code 1 in FORMCD, read:)** where the community should build new schools, hospitals, roads, and firehouses/**(If code 2 in FORMCD, read:)** how to distribute the seats in the U.S. House of Representatives].

You seem to be not in favor of the Census obtaining your information from the Social Security Administration. Can you tell me why?

You seem to be neither strongly in favor of nor against the Census obtaining your information from the Social Security Administration. Can you tell me why?

Which of the following best describes your concern?

How likely are you to respond to government sponsored surveys? Would you say you are very likely to respond, somewhat likely, or not likely?

You may or may not have recently heard that the Office of Personnel Management, or OPM, which is a government agency that conducts background checks and issues security clearances for federal employees, announced a data breach. Before today, how aware would you say you were of the OPM data breach? Were you not at all aware, somewhat aware, or very aware?

Have you, or an immediate family member, received notification from OPM that personal data was stolen in the data breach?

The U.S. Constitution requires a count, or census, of the United States population every ten years. The 2010 Census cost over $10 billion. The Census Bureau is looking at saving money. If the census were held today, how likely would you be to provide the Census Bureau with the number of people living or staying in your house, apartment, or mobile home? Would you say you definitely would, probably would, might or might not, probably would not, or definitely would not?

Imagine standing at your front door looking out to your right. Picture your neighbor's house, apartment, or mobile home immediately to your right. Do you know or do you not know if anyone is living in that house?

Still thinking of your neighbor to the right, do you know or do you not know the number of people living in your neighbor's house?

Still thinking of your neighbor to the right, do you know or do you not know the name of one person living in your neighbor's house?

In order to help the Census Bureau save money, if asked and you knew the answer, how likely would you be to provide the Census with each of the following types of information. For each, tell me if you definitely would provide the Census with the information, probably would, might or might not, probably would not, or definitely would not provide the information. How about _____?

With the information that someone is or is not living in the house to the right of yours?

With the number of people living in the house to the right of yours?

With the name of one person living in the house to the right of yours?

For the next census in 2020, if the Census Bureau got information from <u>(Government Data/Third party data/Administrative data/External data/Big data)</u> they may not need to ask you for this information on a questionnaire and could save government money. This information would be obtained to produce statistics, and the Census Bureau would keep your personal information confidential. I'm going to read three types of information and ask if you would be strongly in favor of the Census Bureau getting your information from(Government Data/Third party data/Administrative data/External data/Big data), somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it? How about _____?

Whether an address was occupied or vacant on a particular date

Basic information about each person living at an address, such as name, age, and sex

Contact information, like phone numbers, physical addresses, and email addresses

For people who do not respond to their census form, do you think it would be better to get their information from their neighbors or to get their information from <u>(Government Data/Third party data/Administrative data/External data/Big data)</u>?

Can you tell me why you are not in favor of using data from <u>(Government Data/Third party data/Administrative data/External data/Big data)</u> for the census?

Which of the following best describes your concern?

Next, a question about the U.S. Government as a whole. Do you think federal government agencies share a single central database of the name, address, and date of birth of U.S. residents, or not?

Every ten years, the United States Census Bureau conducts a nationwide census, or a count of all individuals living in the United States. If the Census were held today, how likely would you be to provide your census information? Would you say you...definitely would, probably would, might or might not, probably would not, or definitely would not?

For the next census in 2020, the Census Bureau is considering ways to save money, minimize inconvenience to households, and improve the accuracy of the data by using information that people have already provided to other government agencies, such as the Social Security Administration. Thinking about the following ways the Census Bureau might use this information from other agencies, please tell me whether you feel each one would or would not be an invasion of your privacy.

If your household did not return a census form in 2020, do you feel it would or would not be an invasion of your privacy to use information from other government agencies, such as the Social Security Administration, to find out IF ANYONE was living at your address?

How about to find out HOW MANY PEOPLE were living at your address?

And how about to find out the NAMES AND AGES of the people living at your address?

Do you feel it would or would not be an invasion of your privacy if the Census Bureau used information from other government agencies, such as the Social Security Administration, to complete your census form for you INSTEAD of mailing a questionnaire to your address?

If your household did not return a census form in 2020, do you feel it would or would not be an invasion of your privacy if the Census Bureau used information provided by your NEIGHBOR to complete your census form for you?

If your household did not return a census form in 2020, the Census Bureau could ask your neighbors to provide information about your household or it could use information you've already provided to other government agencies such as the Social Security Administration. Do you think it is more respectful of your privacy to get missing information from your neighbors or to get it from other government agencies?

Every ten years, the United States Census Bureau conducts a nationwide census, or a count of all individuals living in the United States. For the census 2020, the Census Bureau plans to save resources and taxpayer money by asking people to respond online. If you were asked to respond to the census online, how likely would you be to respond online?

Do you have any concerns about responding online? Yes - next Q; no -skip to New Set 2

Tell me about any concerns you have about answering the census over the Internet. (Do not read response options)

Would prefer to talk with a person

No internet access/Don't use the internet

Online security/fear of hacking

Not trusting federal government with data

Unsure how to verify legitimacy

The government having too much information about you

A government employee misusing your data

The government using the information to get you in trouble

Loss of control/not knowing what is going to happen to your information

Other -> specify

The government already collects data about people's jobs, earnings, and participation in government programs. If these separate data sources could be combined while keeping them strictly confidential < the information could be used to [make better use of taxpayer money/improve government services in your community / inform decisions by policy makers / hold federal agencies accountable]>, would you be strongly in favor of combining the data, somewhat in favor of it, neither in favor nor against it, somewhat against it, or strongly against it?

You seem to be not in favor of combining these data sources to generate information [for *insert purpose from Q1a*]. Can you tell me why?

Would you be any more likely to support combining the data sources if there was an independent group, separate from the federal government, in charge of making sure the data were kept confidential and privacy was respected?

If government information about people's jobs, earnings, and participation in government programs were combined, do you think the information would be more secure if it was kept by the government or by a private company?
