

Request for Non-Substantive Change to 2020 Census Redistricting Data Program
OMB Control No. 0607-0988
U.S. Department of Commerce
U.S. Census Bureau

Purpose

The Redistricting Data Program is a mandated operation of the decennial census. This operation provides states with the opportunity to identify the small area tabulations they need for legislative redistricting which are delivered after each census. The program consists of multiple stages of interaction and review and begins early in the decennial census process.

Background

The 2020 Census Redistricting Program was approved on 11/25/2015. The package that was submitted contained some draft procedural guides for the Census Bureau's Block Boundary Suggestion Project Verification. These draft procedural guides are the Geographic Update Partnership Software User's Guide for verification and the standard Participant Guide for verification. These two documents now exist in final form and need to replace the draft documents included in the package. This Non-Substantive Change Request is a request to update the documents in the package.

There is no substantive change to the program resulting from this change. The finalized instructions do not change the content or objective of the program, but there is a change to the verification steps and instructions.

Burden

The burden of the 2020 Census Redistricting Program is unchanged by this update.
