

## REQUEST FOR DETERMINATION OF RESEARCH STATUS

To be completed by the staff member with lead responsibility for the project and approved by branch chief (if applicable) and Division ADS. A separate PGO funding memo is required if project is research and involves human subjects regardless of the CDC staff role.

**Instructions:** 

- (1) Use this form to declare: (a) the research status of any project, (b) role or roles of CDC staff
- (2) A short summary should be attached offering specific details about the project and the role of staff.
- (3) Be sure to complete all applicable items, obtain appropriate signatures and submit this form for approval.

	[]	YES	(there are no identifying information and no unique identifiers or codes)YES
	[]	NO	(there are identifiers (including codes))

- Please prepare and attach a short summary paragraph (<1 page); if this is new:
  - a. Be sure to include the purpose of the project, specific details about the project and the role of the CDC staff member (s) in the project. In explaining one's role as a consultant be particularly careful to identify involvement in things like: study design decisions, oversight of protocol development, participation in review of data collection procedures, and participation in data analysis and/or manuscript preparation, as well as whether there will be access to identifiable or personal data.
  - b. Explain your project status selection (research--non-exempt, exempt, no CDC investigator or not involving human subjects; public health practice). If you selected research not involving human subjects be sure to indicate if the data includes any personal information (e.g., name, SSN), linkable study identification numbers or codes, or geographical information.

The purpose of this project is to create a pediatric audiology facility searchable database. The facility information gathered will be structured and programmed into a searchable database so hospital staff, parents, and providers can find a facility that can provide the type of audiology service they need. For example if a parent is looking for a facility equipped to evaluate candidacy for cochlear implant, they can access the EHDI-PALS facility database and locate one close to their residence. State EHDI coordinators will also be able to export the database for better visualization and management of their state and neighboring states resource.

The database will not include any identifiable or personal data and is considered public health practice.

See attached document for full project description.

8. Please list the primary project site and all collaborating site(s).

**Explanation of project components:** 

9. If project involves research that is funded extramurally, list amount of award that should be restricted pending IRB approval and describe which project components will be affected, if known:
