**Subject:** FW: zika question  
**Attachments:** Lab Communication for Recommended Additional Zika MAC-ELISA EUA QC check....docx

Dear Wendi,

I have reviewed the attached, as well as the referenced EUA instructions for use. I have confirmed that the instructions and solicitation of summary results is a standard QA/QC procedures that is consistent with the terms of the EUA.

Because this is a routine practice that involves the solicitation of only aggregate QA information, a formal written determination is not necessary. However, I am happy to provide one, if requested.

Sincerely,

Laura

**Subject:** zika question

For you both, we are intending to send the following document that outlines additional QC recommendations for the MAC ELISA to all PHLs. It dawned on us that we should speak with both of you about this.... one for a research determination and second for OMB since we are collecting data from the PHLs.

Can you both review and perhaps we could catch up later today? or if you have some initial thoughts that would be appreciated.

Thanks –wendi
