

2017-2020 National Surveys on Drug Use and Health: Methodological Field Tests

SUPPORTING STATEMENT

B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS

1. Respondent Universe and Sampling Methods

Conducting field tests includes a variety of methods and approaches. The methods chosen for use depend on the subject tested, as well as their intended target population. Recommended methodologies and sample sizes will be based on a review of the relevant literature and consultation with experts in the field. As the methodologies and sample sizes for each field test are determined, they will be detailed in submissions sent to OMB for expedited review.

2. Information Collection Procedures

Information collection procedures will be different for each methodological test, but will generally involve one of the three major methods outlined in section A2 (focus groups, cognitive laboratory testing, field tests) and will be included in the materials for each expedited review.

3. Methods to Maximize Response Rates

Consistent with survey methodology, the design of each field test will include approaches to maximize response rates, while retaining the voluntary nature of the effort. If CBHSQ proposes to offer incentives to respondents to offset their costs of participation (and thereby reduce differential nonresponse), appropriate justification will be provided. These details will be included in the materials for expedited review.

4. Tests of Procedures

The activities to be conducted under this approval are in themselves tests of procedures. Interview guides and questionnaires to be used in the field tests will all be carefully developed and given careful scrutiny and limited, informal testing to assure completeness and smooth flow.

5. Statistical Consultants

Dr. Peter Tice, Statistician, Population Surveys Branch, Division of Surveillance and Data Collection, CBHSQ, SAMHSA is the Government Project Officer, (240) 276-1254. Jonaki Bose, Chief, Population Surveys Branch, Division of Surveillance and Data Collection, CBHSQ, SAMHSA is the primary mathematical statistician responsible for overall project management, (240) 276-1257. RTI International statisticians contributing to the design are Dr. Rachel Harter, Director of Sampling and Statistical Operations, Dr. Akhil Vaish, Director of Small Area Estimation, and Dr. Douglas Currivan, Director of Methods and Redesign Activities.
