Abstract: The Office of Indian Energy and Economic Development (IEED) administers and manages the energy resource development grant program under the Energy and Minerals Development Program (EMDP). Congress may appropriate funds to EMDP on a year-to-year basis. When funding is available, IEED may solicit proposals for energy resource development projects from Indian Tribes and Tribal energy resource development organizations for use in carrying out projects to promote the integration of energy resources, and to process, use or develop those energy resources on Indian land. The projects may be in the areas of exploration, assessment, development, feasibility, or market studies. Indian Tribes that would like to apply for an EMDP grant must submit an application that includes certain information, and must assist IEED by providing information in support of any National Environmental Policy Act (NEPA) analyses. Upon acceptance of an application, a Tribe must then submit one-to two-page quarterly progress reports summarizing events, accomplishments, problems and/or results in executing the project. Quarterly reports assist IEED staff with project monitoring of the EMDP program and ensure that projects are making adequate progress in achieving the project's objectives.

History and Description of the Remains

In March 2018, human remains representing, at minimum, three individuals were removed from 5MT20855 in Montezuma County, CO. The individuals were removed during archeological monitoring for Kinder Morgan CO2 Company's proposed Well Pad and Access Road construction. The human remains were transferred to the Office of Archaeology and Historic Preservation (OAHP) in September 2018, and are identified as OAHP Case Number 331. The human remains represent one adult female 25–35 years of age, one adult female 45–65 years of age, and one adult male 25–60 years of age. No known individuals were identified. The 11 associated funerary objects are one lot of gray ware sherds representing a bowl, one lot of white ware sherds representing a bowl, one lot of stone flakes, three lots of sherds, one Mancos grayware pitcher, one polishing stone, one piece of ground stone in two sections, and two burned juniper slabs.

The site at 5MT20855 is a multicomponent, seasonal habitation site. The architecture and ceramics recovered from the component associated with these individuals date to the late Basketmaker III/Pueblo I periods (A.D. 550–900). Osteological analysis by Woods Canyon Archaeological Consultants determined the individuals to be Native American. The preponderance of the evidence, including geographical location, archeological evidence (including site architecture and material culture), biological evidence, and continuity of key cultural traits through time, shows that the site is associated with the Ancestral Puebloan occupations of the southwestern United States from the Basketmaker II period through the Pueblo III period (approximately 1000 B.C. to A.D. 1300).

In the 1930s, human remains representing one individual were removed from Blue Mesa, La Plata County, CO. A second individual was removed from Yellow Jacket Canyon, Montezuma County, CO. A third individual is represented by a tooth, and
