

## Change Request

May 1, 2017

**Information Collection Request: “Assisted Reproductive Technology (ART) Program Reporting System”**  
(OMB no. 0920-0556, exp. date 7/31/2018)

---

### Background and Justification

CDC is currently approved to collect information needed to determine the annual pregnancy success rates of each clinic that provides assisted reproductive technology (ART) services. This information includes clinical information pertaining to the ART procedure, outcome information on resultant pregnancies and births, and information on factors that may affect outcomes, such as de-identified patient demographics, medical history, and infertility diagnosis.

CDC obtained the current approval for ART information collection in July 2015 with minor modifications approved through the change mechanism in August 2016; screen shots of the approved NASS questionnaire can be found in Att C1b\_v3\_NASS screens.

During the implementation of the new data collection system, it became apparent that some information was not collected consistently for all types of ART cycles, and was inadvertently omitted in some rare situations. The purpose of this change request is to explicitly incorporate these data elements into the approved screen shots, allowing for the most efficient capture of the previously approved information in relation to pregnancy success rates with minimal additional time burden. The proposed revision to the NASS questionnaire (Att C1b\_v4\_NASS screens) contains the following four change requests:

#### **Requested Change 1:**

CDC is approved to collect information on race/ethnicity of male and female patients, oocyte source, pregnancy carrier, and sperm source. This information is captured in the current questionnaire with questions #25-26A of Att C1b\_v3 (race/ethnicity of oocyte source), questions #29-30A of Att C1b\_v3 (race/ethnicity of pregnancy carrier), and questions #33-34A of Att C1b\_v3 (race/ethnicity of sperm source). However, in the rare situation when a patient uses donor eggs, donor sperms, and a gestational carrier, these existing questions will not capture patient race/ethnicity. We propose adding questions #5A-5C (highlighted) of Att C1b v4 (race/ethnicity of patient). In adding these questions to the patient profile in the beginning of the questionnaire, the system will pre-fill race/ethnicity of oocyte source (questions #25-26A; Att C1b\_v3) if it is indicated in question #24A that the patient is the oocyte source, it will prefill race/ethnicity of the pregnancy carrier (questions #29-30A; Att C1b\_v3) if it is indicated in question #27 that the patient is the pregnancy carrier, and it will prefill race/ethnicity of the sperm source (questions #33-34A; Att C1b\_v3) if it is indicated in question #31 that the patient is the sperm source. Thus, because these fields will be pre-populated upon completion of question #5A-C there will be no overall impact on burden.

Change #1: Currently Approved Question Format

PATIENT PROFILE	
Quex ID	LEAD QUESTION
1	Date of cycle reporting (mm/dd/yyyy):  _ _  -  _ _  -  _ _ _ _ _
2	NASS Patient ID:  _ _ _ _ _  -  _ _ _ _ _  -  _ _ _
3	<b>Patient Optional Identifiers</b> Optional Identifier 1  _ _ _ _ _ _ _ _ _  maximum 7 digits or characters  Optional Identifier 2  _ _ _ _ _ _ _ _ _  maximum 7 digits or characters
4	Patient Date of Birth (mm/dd/yyyy):  _ _  -  _ _  -  _ _ _ _ _
5	Sex of patient: <input type="radio"/> Male <input type="radio"/> Female

Change #1: Proposed Question Format

PATIENT PROFILE	
Quex ID	LEAD QUESTION
1	Date of cycle reporting (mm/dd/yyyy):  _ _  -  _ _  -  _ _ _ _ _
2	NASS Patient ID:  _ _ _ _ _  -  _ _ _ _ _  -  _ _ _

5C	<b>Reason race not reported</b> <input type="radio"/> Refused <input type="radio"/> Unknown

**Requested Change 2:**

One of the previously approved pregnancy history questions in the female patient history regarding the number of prior frozen ART cycles (question #21; Att C1b\_v3) needs to be clarified to more completely capture ART treatment history. We propose changing the question from “number of prior frozen ART cycles” to “number of prior ART cycles started with the intent to transfer oocytes or embryos” (highlighted). This change should not affect burden, as we are proposing to clarify one question with a comparable question.

**Change #2: Currently Approved Question Format**

FEMALE PATIENT HISTORY & PHYSICAL		
FEMALE PATIENT HISTORY & PHYSICAL		
Text, checkbox (SR)	16	<b>[IF SEX OF PATIENT = MALE (FROM QUESTION #5) THEN SKIP #16-23]</b> <b>Height</b>  _ _  Feet and/or  _ _  Inches or  _ _ _ _  Centimeters Or <input type="checkbox"/> Height unknown
Text, checkbox (SR)		<b>Weight at the start of this cycle</b>  _ _ _  Pounds or  _ _ _  Kilograms Or <input type="checkbox"/> Weight unknown

### Requested Change 3

CDC is approved to collect information on height, weight and pregnancy history for patients seeking ART treatment (questions #16-23; Att C1b\_v3). However, for oocyte donors, height, weight, and pregnancy history was inadvertently omitted from the approved collection tool. Because this information is important regardless of oocyte source, we therefore propose adding questions #O1-#O8; Att C1b\_v4 (highlighted) to the oocyte source profile, if the oocyte source is a donor (i.e. not the patient). The estimated additional time burden, on average will be minimal (0.3 min) given that a small overall proportion of cycles use donated oocytes. If the oocyte source is the patient, questions #O1-O8 will be prefilled using information from questions #16-23, to avoid any impact on overall burden.

#### Change #3: Currently Approved Question Format

**Requested Change #4:**

CDC is approved to collect the date of any previous oocyte retrieval that contributed to a reported embryo transfer cycle to allow for details of previous retrievals to be linked to current transfers. However, this information only allows for the linkage of retrievals and transfers if the retrieval and transfer occurred in the same clinic; it does not capture the situation in which oocytes were retrieved in an ART clinic that is different from the ART clinic where the current transfer is taking place. Collection of the date of any previous retrieval, along with the clinic in which the previous retrieval took place (if different from the clinic performing the transfer) will allow for more complete linkage of embryo transfers to egg retrievals. This information will allow for a better understanding of the cumulative success rates over multiple ART treatment cycles.

We therefore propose adding questions #58C and #62C (highlighted; Att C1b\_v4) to capture information on previous oocyte retrievals for current fresh embryo transfers or thawed embryo transfers if the retrieval and transfer did not occur in the same clinic. It is estimated that this change will add an average burden of 0.2 minutes.

### Timeline and impact on Burden

CDC plans to begin administering the revised instruments in 2018. OMB approval is requested, effective immediately. Due to the rare occurrence of the situations described above, additional burden is minimal. The estimated average burden per response will increase from 42 minutes to 42.5 minutes with an increase of 1,315 total burden hours.

### Estimated Annualized Burden Hours

Form Name	Respondents	No. of Respondents	Average No. of Responses per Respondent	Average Burden per Response (in hours)	Total Burden Hours
Current NASS 2.0	ART clinics	447	353	42/60	116,425
Proposed NASS 2.0	ART clinics	447	353	42.5/60	117,740
