

You're wondering:
**“Is anyone watching
to see if GMOs
are safe?”**

For nearly 20 years, since GMOs have been on grocery store shelves, FDA scientists have been evaluating safety studies and digging deep into the data to make sure GMOs are a safe part of our food supply.

It's something you've
thought about:

**“Do the people at
FDA consider how
GMOs fit into their
families' meals?”**

FDA, USDA, and EPA scientists go to work every day with the safety of Americans in mind. They understand that what they do is important to all of us—including their own families.

You have the power to know what they've learned about bioengineered food. Visit **URL TO COME.**

You said to a friend:

**“Why would anyone
create GMOs anyway?”**

GMOs are developed to change plant traits. That could mean greater resistance to insect damage, immunity to plant diseases, or higher quality foods for all of us. It's the same reason humans have been modifying plants for thousands of years.

You have the power to know the reasons for GMOs. Find more answers at **URL TO COME.**

FDA

You want someone to answer:

“What are GMOs?
Fruits, grains,
vegetables, or
meats?”

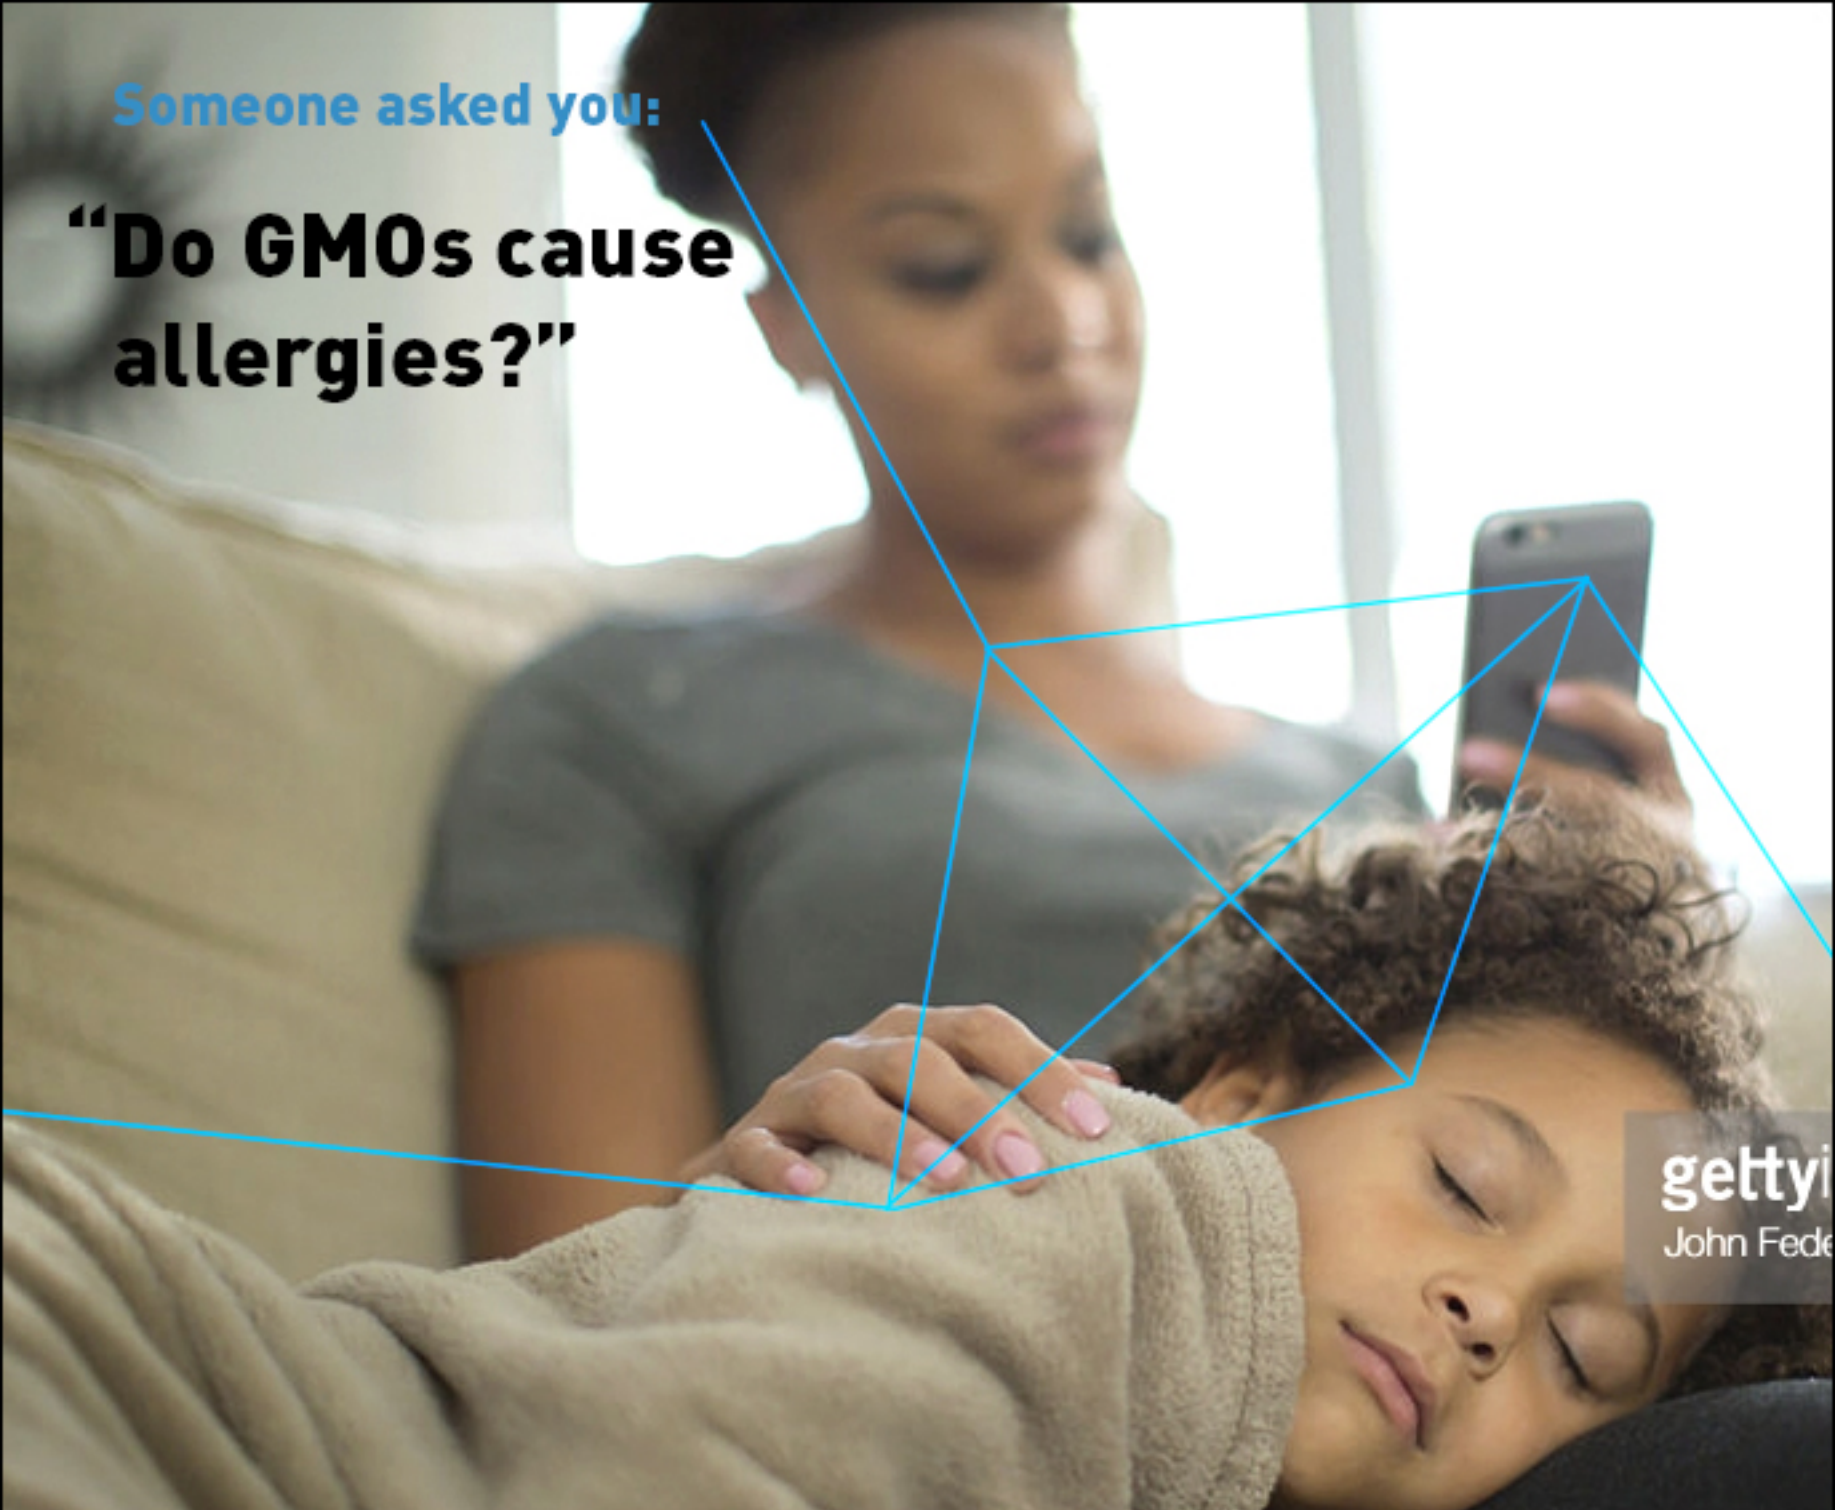

You have the power to know what's a GMO.
