## G. FCR INPUT TRANSACTION LAYOUTS

This appendix presents the layouts for records accepted by the FCR system. Each record layout in this appendix includes the following:

1. **Field Name** – the name of the field as it appears on the input transaction layout
2. **Location** – the position of the field on the record
3. **Length** – the number of characters allowed in the field
4. **A/N** – the type of field: alphabetic (A), numeric (N), or alphanumeric (A/N)
5. **Comments** – indicates if the field is required for the transaction, and provides an explanation of the field and the field’s relationship to other fields or records

The Comments section indicates when the field is required for the transaction. Fields defined as “Conditionally Required” must be present on the input record, based on the conditions described in the Comments field. Comments also provide an explanation of the field and its relationship to other fields or records. Additional information regarding each field is in Appendix E, “Data Dictionary.”

Use SSA’s network and the CyberFusion Integration Suite (CFI) protocol to transmit input transactions to the FCR. Section 3.1, “CyberFusion (CFI),” describes CFI and the process for transmission of data to the FCR. When transmitting input records, the FCR Transmission Header record must be the first record in the transmission. If the Header record is not the first record in the transmission, the system rejects all records until a Header record is located. The data transmitted to the FCR must comply with these requirements:

1. All data must be in EBCDIC format.
2. All alphabetic data, except the User field, must be in upper case.
3. All alphabetic and alphanumeric data must be left justified.
4. All numeric data must be right justified and zero-filled.
5. All dates must be in CCYYMMDD format.
6. All Filler fields must be spaces, not low values.

Appendix D, “Data Dictionary,” contains additional information regarding each field.

Chart G-1 lists and describes the input record layouts accepted by the FCR system.

Figure G-1, “FCR Batch Input Record Relationships,” is a diagram of the relationship of the input records within a batch.

**CHART G-: INPUT RECORD LAYOUTS ACCEPTED BY THE FCR**

Input Record Name	Record Purpose
FCR Transmission Header Record	<p>This record contains a record identifier of 'FA'.                      This record must be the first record in a batch of transaction records sent to the FCR. It identifies the submitter of the batch. The batch number in this record uniquely identifies the batch.</p>
FCR Input Case Record	<p>This record contains a record identifier of 'FC'.                      Use this record to add cases to the FCR. You can also use this record to change case information, or to delete a case from the FCR. When you close a case on your system, using valid case closure criteria under §45 CFR 303.11, you must send a Delete transaction to the FCR to indicate the case was closed. Upon receipt and acceptance of the Delete transaction, the system deletes the case from the FCR. The case closure criteria are permissive rather than mandatory. If a case does not meet one of the closure criteria, it must remain open. However, you have the option to leave a case open even if it does meet the case closure criteria. When deciding whether to close a case, which would delete it from the FCR, you should weigh the benefits of keeping the case on the FCR or deleting it.                      This appendix provides three explanations of this record, based on the action requested: add, change, or delete a case. While a single record format is used, the separate explanations provide a clear definition of the required and optional fields, based on the record's action type code.</p>

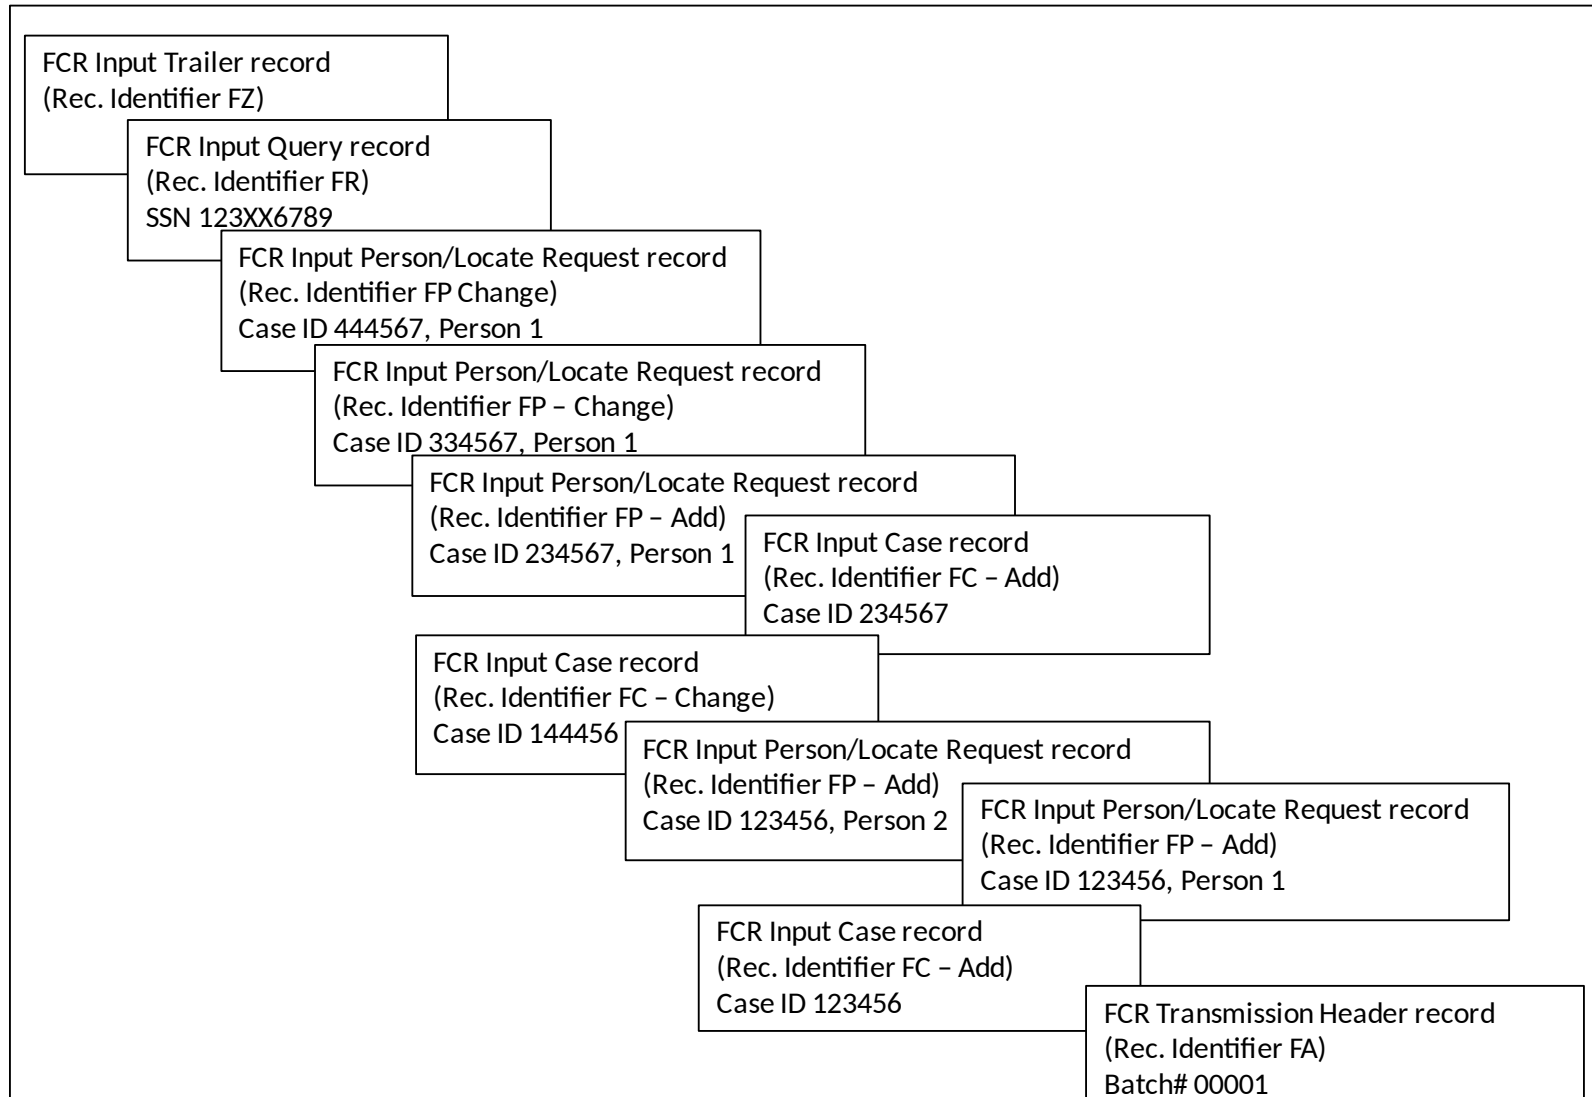

**CHART G-: INPUT RECORD LAYOUTS ACCEPTED BY THE FCR**

Input Record Name	Record Purpose
<p>FCR Input Person/Locate Request Record</p>	<p>This record contains a record identifier of ‘FP’.</p> <p>Use this record to add a person in a child support case to the FCR. You can also use this record to change information for, or delete a person from, a case on the FCR.</p> <p>The submitted record can include an SSN/name combination validated using the SSA SSN verification routines. If the person’s SSN is not available, you can submit additional information on this record to allow the FCR to automatically utilize SSA and IRS SSN identification routines to obtain the SSN.</p> <p>Use this record to initiate, or terminate, a request for Locate processing for a person. You can initiate a request for Locate processing when the person information is added or changed. You can also initiate a Locate using this record without adding or changing a person on the FCR. You must specify the desired Locate sources on the record.</p> <p><b>Note:</b> Under certain conditions, the FCR automatically performs a Locate of the NDNH when a person is added to, or changed on, the FCR. Refer to Section 6.10, “Proactive Matching.”</p> <p>Five explanations of this record are provided based on the action requested:</p> <ol style="list-style-type: none"> <li>1. add a person</li> <li>2. change a person</li> <li>3. delete a person</li> <li>4. initiate a request for Locate, or</li> <li>5. terminate a Locate Request</li> </ol> <p>While a single record format is used for each of these actions, the separate explanations provide a clear definition of the required and optional fields, based on the record’s action type code.</p>
<p>FCR Input Query Record</p>	<p>This record contains a record identifier of ‘FR’.</p> <p>Use this record to obtain, when authorized, case and associated person(s) information from the FCR for a specific person. You are authorized to submit and receive FCR information for a person whom you have registered on the FCR.</p>

**CHART G-: INPUT RECORD LAYOUTS ACCEPTED BY THE FCR**

Input Record Name	Record Purpose
FCR Change of Address Verification Request Record	This record contains a record identifier of 'NC'. Use this record to request verification of an address for a IV-D participant, using the NCOA <sup>Link®</sup> database.
FCR Input Trailer Record	This record contains a record identifier of 'FZ'. This record must be the last record in a batch of transactions sent to the FCR. This record indicates the total number of transactions in the transmission. The FCR uses this to determine if the transmission was successfully completed.
