Noncitrus Fruit Highlights

In 2014, the Nation's utilized production of the leading noncitrus fruit crops totaled 19.0 million tons, 1 percent above the January 2015 preliminary estimate. However, utilized production is down 2 percent from 2013.

The value of utilized production for 2014 noncitrus fruit crops totaled 16.3 billion dollars, up less than 1 percent from the January 2015 preliminary estimate. Value of utilized production is up 1 percent from the previous year.

(NA) Not available.

(X) Not applicable.

¹ Harvested acreage. Yield based on utilized production.

² Idaho, Michigan, Oregon, and Washington.

³ Yield based on in-shell equivalent. Shelling ratios are: 2012 - 0.571; 2013 - 0.580; 2014 - 0.605.

⁴ Production is rounded to the nearest 1,000 barrels prior to converting to tons fresh equivalent.

⁵ Price is for dried basis.

⁶ Price and value are based on the edible portion of the crop only.

Fruits and Nuts Bearing Acreage – United States: 2012-2014

| Year | Citrus Fruits ¹ | Major Deciduous Fruits ² | Miscellaneous Noncitrus ³ | Nuts ⁴ | Total |
|------------|----------------------------|-------------------------------------|--------------------------------------|-------------------|-----------|
| | (acres) | (acres) | (acres) | (acres) | (acres) |
| 2012 | 801,800 | 1,734,600 | 260,710 | 1,316,000 | 4,113,110 |
| 2013 | 797,100 | 1,749,580 | 331,150 | 1,379,000 | 4,256,830 |
| 2014 | 782,300 | 1,738,390 | 353,695 | 1,427,000 | 4,301,385 |

¹ Grapefruit, lemons, oranges, tangelos, and tangerines.

² Commercial apples, apricots, cherries, grapes, nectarines, peaches, pears, plums, and prunes.

³ Avocados, bananas, berries, cranberries, dates, figs, guavas, kiwifruit, olives, papayas, and strawberries.

⁴ Almonds, hazelnuts, macadamia nuts, pistachios, and walnuts.

Noncitrus Fruits Utilized Production by Type of Utilization – United States: 2012-2014

¹ Yield is based on utilized production.

Crop Comments

Apples: Utilized apple production for 2014 is estimated at a record high 11.2 billion pounds, up 8 percent from 2013. Washington apple growers reported that warm spring weather and the growth of high density orchards have resulted in a record high harvest. New York's apple growers reported favorable growing conditions for the second consecutive year.

Grapes: Utilized grape production for 2014 is estimated at 7.76 million tons, down 10 percent from the revised 2013 total. The California crop, which accounts for 88 percent of the 2014 United States utilized grape production, is down 12 percent from the previous year. Bearing acreage, at 1.03 million acres for the 2014 season, is down 1 percent from the revised 2013 acreage. California bearing acres for the 2014 season is down 10,000 acres from the previous year. In 2014, the value of utilized production totaled 5.82 billion dollars down 5 percent from the revised 2013 value 6.14 billion dollars. California's 2014 utilized production is valued at 5.24 billion dollars, accounting for 90 percent of the overall United States value of utilized production.

Peaches: Utilized peach production for 2014 is estimated at 838,027 tons, down 6 percent from the previous year. The California crop, accounting for 74 percent of the United States utilized peach production, is down 4 percent from 2013.

In California, the Freestone peaches full bloom occurred approximately a week ahead of schedule and lasted longer than usual. Fruit set was variable. Growers reported the drought situation remained a concern, however many of them were able to offset reduced irrigation district water deliveries by utilizing wells to pump groundwater. Clingstone full bloom occurred in early-March, slightly earlier than last year. Growers completed spraying and pruning by the end of March.

In South Carolina, a freeze in mid-April damaged peach bloom and rain early in the harvesting period negatively affected the crop. Harvest started during the week ending May 25. By September 7, the entire crop was harvested, which was similar to last year and the 5-year average. The reported condition for peaches was fair to good. In Georgia, a cooler than normal winter benefited the crop with added chill hours. However, a hard freeze in late-March caused some loss with early season varieties. A very cold March, and a cooler than normal late-spring, delayed harvest. Overall, production has remained steady during the last three seasons.

Growing conditions in New Jersey were ideal throughout the spring. Tree bloom and fruit sets were late because of cold weather, but size and quality rated mostly good to excellent. Much of Pennsylvania's crop was lost due to frost. In Michigan, many peach trees experienced winter kill as a consequence of last winter's temperatures extremes and most trees that survived still experienced some degree of bud die-off and failure to leaf out. Reported yield was significantly reduced compared to historical averages, though the quality of the surviving fruit was reported to be very good. The crop finished blooming by early-June and harvest occurred from mid-July to early-September.

Pears: Utilized pear production for 2014 is estimated at 831,250 tons, down 5 percent from the 2013 estimate. Four of the six estimating States (California, Michigan, New York, and Washington) showed decreased production from last season, while Oregon and Pennsylvania showed an increase.

In California, harvest began in the Sacramento-San Joaquin region the first week of July, similar to the prior year. Mostly fair weather occurred during harvest with quality reported as mostly fair to good. Sizing was reported to be good for early-season pears, however grower reported yield for all pears is down from the previous year.

In Michigan and New York, a harsh winter lowered yields to about half of the previous season. In Pennsylvania, excessive rain and cold spring temperatures reduced this season's crop.

In Oregon and Washington, a crop with excellent quality has been reported throughout the growing region. Excellent growing conditions in 2014 enabled the pears to size well. Harvest began in late-July and finished in mid-October.

Tree nuts: Utilized tree nut production for crop year 2014 is 2.56 million tons (in-shell basis), 4 percent below the previous year. Almond utilized production, at 1.55 million tons is down 11 percent from 2013. Walnut utilized production in 2014, at 570,000 tons, is up 16 percent from the previous year. Pistachio utilized production, at 257,000 tons is 9 percent higher than 2013. Pecan utilized production in 2014 is estimated at 132,075 tons, a slight decrease from 2013. The hazelnut crop, at 36,000 tons, is 20 percent below the previous year. Macadamia nut production is 23,000 tons, up 12 percent from 2013.

Value of United States utilized nut production in 2014 is 10.0 billion dollars, down 4 percent from the 2013 value. The 2014 utilized almond crop is valued at 5.89 billion dollars, 8 percent less than the previous year. Pistachio utilized crop value for 2014, at 1.59 billion dollars, is down 3 percent from previous year. The value of the 2014 utilized pecan crop increased 12 percent to 517 million dollars. Hazelnut utilized crop value, at 130 million dollars, is 7 percent above last year. The 2014 utilized macadamia nut crop is valued at 40.0 million dollars, up 12 percent from 2013.

Definition of Terms

Bearing acreage: An orchard, grove, or vineyard is considered to be of bearing age when it can normally be expected to produce a commercially significant quantity of the crop. Bearing age is a function of many factors including variety, rootstock, year planted, etc.

Apple crop: Apple production estimates are published only for commercial orchards, according to the laws governing crop production reports (7 U.S.C 411b). Commercial orchards, under these laws, are defined as orchards of 100 or more bearing trees.

Harvested not sold: Fruit of marketable quality that was picked but not sold for various reasons up to 2 percent of total production is considered normal seasonal loss and is excluded from total production. Reported values are above and beyond these normal seasonal losses.

Total production: The quantity of a crop actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons are included in production estimates.

Unutilized production: The difference between total and utilized production, which is marketable fruit not harvested for economic or natural reasons and harvested fruit not sold or utilized, is unutilized production.

Unharvested production: Marketable fruit produced, but not harvested for various reasons, is unharvested production. Unharvested amounts up to 2 percent of total production are considered normal seasonal losses and are excluded from total production. Published estimates of unharvested production represent quantities above and beyond these normal seasonal losses.

Utilization: These estimates refer to the first utilization, not necessarily the final utilization of a crop. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Utilized production: The amount of a crop sold plus the quantities used at home or held in storage represents utilized production.

Yield per acre: Unless otherwise stated, yield per acre is based on total production.

Price and Value Definitions

Price: Except where specified as monthly, prices in this report represent the Market Year Average (MYA) price. For a crop sold for both fresh market and processing, the total crop MYA is a weighted average of the fresh and processing prices.

Prices for fresh fruit represent the average price producers receive at the point of first sale. This is commonly referred to as the average price as sold. The exception is fresh fruit sales in California, Michigan (apples only), New York (apples only), and Washington which are equivalent returns at packinghouse door.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries, California olives, and freestone peaches, which are priced at the first delivery point.

Value: Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts which are based on a calendar year.

State MYA Price and Value Computations

Fresh Market Value:

Fresh Market MYA * Fresh Market Utilization

Processed Value:

Processed MYA * Processed Utilization

"All" Value:

Fresh Market Value + Processed Value

"All" MYA:

"All" Value / "All" Utilization

For commodities with components not identified by market channel, substitute breakdown name for fresh market/processed and use the same procedure.

United States MYA Price and Value Computations

Fresh Market MYA:

$$\frac{\sum(\text{Fresh Market Value For All States})}{\sum(\text{Fresh Market Utilization For All States})}$$

Processed MYA:

$$\frac{\sum(\text{Processed Value For All States})}{\sum(\text{Processed Utilization For All States})}$$

"All" MYA:

$$\frac{\sum(\text{Value For All States})}{\sum(\text{Utilization For All States})}$$

Marketing Seasons for Noncitrus Fruits

Apples: July to May for Illinois, Indiana, Michigan and Ohio; August to December for Arizona, Iowa, Minnesota, Missouri, New Jersey, Tennessee and Wisconsin; August to June for all other states.

Apricots: May 15 to July 5 for California; June 10 to August 15 for Utah; June 20 to August 1 for Washington.

Avocados: November 1 to October for California; June 20 to March 1 for Florida; January 1 to December 31 for Hawaii.

Bananas: January 1 to December 31

Cherries, sweet: April 25 to June 15 for California; July 20 to August 20 for Montana; June to July for all other States.

Cherries, tart: June 25 to August 15

Cranberries: September 15 to January 1

Dates: August 15 to March 15

Figs: June 5 to October 30

Grapes: May 25 to July for Table (California); June 5 to July 31 for Raisin (California); August 15 to December 15 for Wine (California and Washington); September 15 to November 1 for Juice (Washington); July to October for all other States.

Guavas: January 1 to December 31

Kiwifruit: October 1 to May 31

Nectarines: April 30 to October 15

Olives: August 1 to July 31

Papayas: January 1 to December 31

Peaches: July 10 to September 15 for Clingstone (California); April 20 to October 10 for Freestone (California); May to August for Georgia and South Carolina; July to September for all other States.

Pears: July to December for Bartlett (California, Oregon, and Washington); July to June for other (California, Oregon, and Washington); August to November for all other States.

Plums: May 15 to October 20 for California

Prunes, dried: August 20 to April 15 for California

Prunes and plums: August 15 to October 15

Marketing Seasons for Tree Nuts

Almonds: August 5 to November 15

Hazelnuts: October 1 to November 30

Macadamia nuts: July 1 to June 30

Pecans: October 1 to March 31

Pistachios: September 30 to January 30

Walnuts: September 15 to November 10

For detail by States, see Agricultural Handbook No. 729, *Fruits and Tree Nuts: Blooming, Harvesting, and Marketing Dates*, December 2006.

Statistical Methodology

Survey Procedures: Non-probability monthly grower surveys are used to collect crop condition, yield, acreage, and production data. These fruit inquiries are generally mailed surveys during the growing season. Telephone follow-up of mail survey non-respondents is used to ensure adequate coverage. Special grower disposition surveys are conducted at the end of each season to provide additional details about the crop. They provide indications of the quantity used on farms, the quantity sold directly to consumers, unharvested production, and production not sold or utilized. All fruit and nut processors or shellers are also surveyed annually to determine quantity handle, utilization, and the origin of the commodity.

Estimating Procedures: Information obtained from the non-citrus fruits and nuts grower surveys along with federal administrative data is used to establish estimates of bearing acres, yield, total production, utilized production, price, and value. These estimates are reviewed for errors, reasonableness, and consistency with historical estimates.

Revision Policy: Final survey indications and check data for most non-citrus fruits and nuts are available prior to submitting utilization estimates. As a result revisions are allowed for a few crops in the spring. End-of-season estimates of production are made following harvest and are subject to revision the following year based on a thorough review of all available data.

Reliability: To assist users in evaluating the reliability of the July noncitrus fruit total production estimates, the "Root Mean Square Error," a statistical measure based on past performance, is computed. The deviation between the first July total production estimate and the final estimate is expressed as a percentage of the final estimate. The average of squared percentage deviations for the latest 20-year period is computed. The square root of the average becomes statistically the "Root Mean Square Error." Probability statements can be made concerning expected differences in the current estimate relative to the final end-of-season estimate, assuming that factors affecting this year's estimate are not different from those influencing recent years. For example, the "Root Mean Square Error" for the July apple total production estimate is 1.2 percent. This means that chances are 2 out of 3 that the current production estimate will not be above or below the final estimate by more than 1.2 percent. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 2.0 percent.

The following table is included with a 20-year record for selected crops of the differences between the first July total production estimate and the final estimate. Using apples again as an example, changes between the first July estimate and the final estimate during the last 20 years have averaged 44.0 thousand tons, ranging from 0.7 thousand tons to 129.5 thousand tons. The first July estimate has been below the final estimate 6 times and above 14 times. This does not imply that the July estimate this year is likely to understate or overstate the final production.

Reliability of Selected Noncitrus Fruit Estimates

[Comparisons for 2012 have been excluded]

| Crop | Root mean square error | | 20-year record of differences between initial estimate and final estimate | | | | |
|--------------------|------------------------|--------------------------------|---|----------|---------|-------------|-------------|
| | Percent | 90 percent confidence interval | Quantity | | | Years | |
| | | | Average | Smallest | Largest | Below final | Above final |
| | | | (1,000) | (1,000) | (1,000) | (number) | (number) |
| Apples tons | 1.2 | 2.0 | 44.0 | (Z) | 129.5 | 6 | 14 |
| Grapes tons | 0.5 | 0.9 | 24.6 | (Z) | 83.0 | 12 | 8 |
| Peaches tons | 0.9 | 1.6 | 7.4 | (Z) | 25.1 | 7 | 13 |
| Pears tons | 1.4 | 2.3 | 8.2 | (Z) | 35.0 | 7 | 8 |

(Z) Less than half of the unit shown.

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov> and in the “Follow NASS” box under “Receive reports by Email,” click on “National” or “State” to select the reports you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the [USDA Program Discrimination Complaint Form](#) (PDF), found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.
