Tendered Groundfish Reporting using tLandings

The tLandings application can be used on a boat, from a configured thumb drive, without an internet connection, while tendering groundfish or salmon.

The tLandings thumb drive configuration does require the following, when used in groundfish fisheries:

- selection of the groundfish application configuration
- a catcher vessel list for groundfish deliveries
- a species list unique to groundfish.

To configure the thumb drives for groundfish tendering open the Processor Tender Interface PTI 2016 and login.

NOTE: Viewing the PTI DVD prior to or immediately after you review this document is recommended.

Select Manage Master Vessel List

Select the Operation from the Master Vessel List in the Advanced menu. It is normally your plant/receiver.

🛃 Parent Operation	and Report Type Selection						
Choose operation and report type to manage vessel Defaults:							
Operation							
Sunset Processing Report Type SUNRISE PROCESSING PLANT AK FRESH for SUNRISE PROCESSING							
	OK Cancel						

For example, I will choose Sunrise Processing and Groundfish Landing Report.

Parent Operation	and Report Type Selection
Choose operat	ion and report type to manage vessel Defaults:
Operation	SUNRISE PROCESSING PLANT
Report Type	Croundfish Landing Deport
	Salmon Landing Report
	OK Cancel

This opens an empty Vessel Defaults table for Sunrise Processing.

Vessel Defaults for SUN	RISE PROCESSING PLANT - Groundfish Landing	Report			×
ADF&G#	Vessel Name	Gear	Crew	Chill Type	Tare
Reload from Se	rver Select All	Unselect All	Delete Line	Save	Cancel

The following fields are required for the Vessel Defaults table:

- Vessel ADF&G #
- Vessel Name
- Groundfish gear

Number of crew, chill type and tare are not required in the Vessel Defaults table. You can enter crew number, if known for any or all catcher vessels.

The catcher vessel list can be created in Excel in the format order shown above and a copy/paste function will transfer the list to the Master Vessel list.

	Processor Tender Interfive Vessel Defaults list s	ace aved on server. Do you Yes	No Can	a local file?		
Reload fro	om Server Select A	II Unselect All	Delete Line		Save	ancel

We recommend that you always save the vessel file to the server and also save your desktop or local network. To distinguish the groundfish vessel list from the salmon vessel list, please add an underscore "_" and a "g" (for groundfish) to the File Name. In this example, vesselDefaults_1000409_g.xml.

After the vessel file is saved to the server, each time a landing report with a new catcher vessel, that does not appear on the vessel defaults list, is uploaded from the tLandings thumb drive to the database via PTI, the master list on the server is updated to include this catcher vessel as well. This means that the processor and tender operators do not need to continually add this vessel when additional deliveries occur.

Next, I will create the Master Species list by selecting Manage Master Species Defaults from the Advanced menu.

Processor Tender Interface - E O Wilson logged in						
File Codes A	File Codes Advanced Window Help

Most of the settings for tLandings Configuration do not apply or are not helpful with groundfish tendering. You can specify the color of the tLandings toolbar to provide a visual clue to tender users. For example, you could make the tLandings Tool Bar be colored blue for groundfish tlandings thumb drives. We recommend a different Tool Bar Color for groundfish, to help tender operators that tender both groundfish and salmon.

Linstall tLandings on Thumbdrives		- XX
Installation Settings Summary		
Operation	CHINIAK-AK (Tender)- Operation ID 2680 for 2677	
Installation Type	Install numbers and defaults Only for Groundfish Landing Reports	
Numbers	45	
Species Defaults Source	C:\Users\pgsmith\Desktop\speciesDefaults_Groundfish_1000409.xml	
Vessel Defaults Source	C:\Users\pgsmith\Desktop\vesselDefaults_1000409_g.xml	
Click the install button to begin installing t	Landings on the target drives	
Customize Install	Once you have established the settings appropriate to tLandings for groundfish, review the Install Settings summary and choose Install. Prev Install Close	

Once you have completed the configuration, simply select Install.

These defaults will remain in place until changed. The process described above need only occur once, until the fishery changes or you wish to modify the defaults. In other words, in most cases, you will only need to identify the tender or buying station operation, review defaults for accuracy and then select Install.

The tLandings for Groundfish Reporting Pages

Time of Landing	10:25		Landing Cha	aracteristics	
Number Of Observers			Dock D	elivery Delivery	
Discard Report					

The Vessel reporting page for tLandings for groundfish is slightly different when compared to the Vessel reporting page for salmon.

In addition to the processor code, the Federal Permit number is listed and the management program defaults to OA – Open Access.

Additional fields include the following:

- Number of Observers
- Discard Report
- ODDS Trip Number
- Crew Size

The tender operator should ask the delivering catcher vessel if a groundfish observer is onboard. If not, the value is zero -0.

The number of crew and number of observers are required fields for groundfish.

Discard reports are required by federal regulation to be given to the processor or tender at the time of a groundfish offload if the vessel is federally permitted and is greater than or equal to 60 feet in overall length. Use the drop-down list to indicate if you have received a copy of the

discard report from the vessel logbook. If you do not have a discard report, fill in the appropriate reason.

The ODDS trip number field is optional but is requested. Simply ask the catcher vessel skipper if they can provide their ODDS number. For more information, please reference the following document.

https://elandings.atlassian.net/wiki/display/doc/ Adding+Observer+Declare+and+Deploy+System+-ODDS-+trip+number+to+elandings

The Landings Characteristics are limited to Dock delivery and Partial Delivery. Check if either or both apply.

The fish ticket mirrors the groundfish fish ticket generated from the eLandings web application. Note that the tender vessel is identified and the ODDS Trip Number is listed.

Processor Tender Interface Upload

The upload process is identical to upload of salmon tickets. We recommend that you assign a tender batch number and check the Update Master Vessel List to update your catcher vessel list at all times. The PTI will allow you to upload the reports as initial or final status. If additional sorting of the target catch will occur, the landing reports can be updated and finalized in the eLandings Web application.

🖄 Report In	nport								
	Tender User EWILSON - E O Wilson					Upload as Initial Report			
Tender Operation CHINIAK-SUN						Tender Batch	Tender Batch		
Override Operation									
	Total Reports	1	1 Unsubmitted Reports			1 Update Master Vessel List
