SECTION II - MEDICAL HISTORY

2A. DESCRIBE THE HISTORY *(including onset and course)* OF THE VETERAN'S HAND, FINGER OR THUMB CONDITION *(brief summary):*

2B. DOMINANT HAND:

☐ RIGHT ☐ LEFT ☐ AMBIDEXTROUS

2C. DOES THE VETERAN REPORT THAT FLARE-UPS IMPACT THE FUNCTION OF THE HAND, FINGER OR THUMB?

☐ YES ☐ NO

IF YES, DOCUMENT THE VETERAN'S DESCRIPTION OF THE IMPACT OF FLARE-UPS IN HIS OR HER OWN HANDS:

2D. DOES THE VETERAN REPORT HAVING ANY FUNCTIONAL LOSS OR FUNCTIONAL IMPAIRMENT OF THE JOINT OR EXTREMITY BEING EVALUATED ON THIS DBQ *(regardless of repetitive use)*?

☐ YES ☐ NO

IF YES, DOCUMENT THE VETERAN'S DESCRIPTION OF FUNCTIONAL LOSS OR FUNCTIONAL IMPAIRMENT IN HIS OR HER OWN WORDS:

SECTION III - INITIAL RANGE OF MOTION *(ROM)* MEASUREMENTS

Measure ROM with a goniometer, rounding each measurement to the nearest 5 degrees, or measure the gap between thumb pad and fingers or between fingers and palm according to the guidance below. During ROM evaluation, observe any evidence of painful motion, manifested by visible behavior such as facial expression, wincing, on pressure or manipulation, etc. Document painful movement in question 5 below.

Following the initial assessment of ROM, perform repetitive-use testing. For VA purposes, repetitive-use testing must be included in all joint exams. The VA has determined that 3 repetitions of ROM (at a minimum) can serve as a representative test of the effect of repetitive use. After the initial measurement, reassess ROM after 3 repetitions. Report post-test measurements in question 4.

For digits II through V, the metacarpophalangeal joint has a range of zero to 90 degrees of flexion, the proximal interphalangeal joint has a range of zero to 100 degrees of flexion, and the distal (terminal) interphalangeal joint has a range of zero to 70 or 80 degrees of flexion. For the index, long, ring, and little fingers (digits II, III, IV, and V), zero degrees of flexion represents the fingers fully extended, making a straight line with the rest of the hand.

3A. WERE ALL ROM MEASUREMENTS NORMAL?

☐ YES ☐ NO, COMPLETE QUESTIONS 3B THROUGH 3F

3B. FINGER FLEXION: DOCUMENT THE ROM IN DEGREES

SECTION VI - FUNCTIONAL LOSS AND ADDITIONAL LIMITATION OF ROM

NOTE: The VA defines functional loss as the inability to perform normal working movements of the body with normal excursion, strength, speed, coordination and/or endurance.
Using information from the history and physical exam, select the factors below that contribute to functional loss or impairment (regardless of repetitive use) or to additional limitation of ROM or increased gap distance after repetitive use for the joint or extremity being evaluated on this DBQ:

6A. CONTRIBUTING FACTORS OF DISABILITY *(check all that apply and indicate digit affected)*:

☐ No functional loss for left hand, thumb or fingers

☐ No functional loss for right hand, thumb or fingers

☐ Other, describe:		

NOTE: If any of the above factors is/are associated with limitation of motion, the examiner must give an opinion on whether pain, weakness, fatigability, or incoordination could significantly limit functional ability during flare-ups or when the joint is ***used repeatedly over a period of time*** and that opinion, if feasible, should be expressed in terms of the degree of ROM loss or gap distances due to pain on use or during flare-ups. The following section will assist you in providing this required opinion.

☐ YES ☐ NO IF YES, ALSO COMPLETE A SCARS DBQ.

IF NO, PROVIDE LOCATION AND MEASUREMENTS OF SCAR IN CENTIMETERS.

Location: _____

Measurements: length _____ cm X width _____ cm.

NOTE: An "unstable scar" is one where, for any reason, there is frequent loss of covering of the skin over the scar. If there are multiple scars, enter additional locations and measurements in Comment section below. It is not necessary to also complete a Scars DBQ.

SECTION XI - REMAINING EFFECTIVE FUNCTION OF THE EXTREMITIES

11A. DUE TO THE VETERAN'S HAND, FINGER OR THUMB CONDITIONS, IS THERE FUNCTIONAL IMPAIRMENT OF AN EXTREMITY SUCH THAT NO EFFECTIVE FUNCTIONS REMAINS OTHER THAN THAT WHICH WOULD BE EQUALLY WELL SERVED BY AN AMPUTATION WITH PROSTHESIS? *(Functions of the upper extremity include grasping, manipulation, etc., while functions for the lower extremity include balance and propulsion, etc.)*

☐ YES, FUNCTIONING IS SO DIMINISHED THAT AMPUTATION WITH PROTHESIS WOULD EQUALLY SERVE THE VETERAN.

☐ NO

IF YES, INDICATE EXTREMITIES FOR WHICH THIS APPLIES: ☐ RIGHT UPPER ☐ LEFT UPPER

FOR EACH CHECKED EXTREMITY, IDENTIFY THE CONDITION CAUSING LOSS OF FUNCTION, DESCRIBE LOSS OF EFFECTIVE FUNCTION AND PROVIDE SPECIFIC EXAMPLES *(brief summary)*:

NOTE: The intention of this section is to permit the examiner to quantify the level of remaining function; it is not intended to inquire whether the Veteran should undergo an amputation with fitting of a prothesis. For example, if the functions of grasping (hand) or propulsion (foot) are as limited as if the Veteran had an amputation and prosthesis, the examiner should check "yes" and describe the diminished functioning. The question simply asks whether the functional loss is to the same degree as if there were an amputation of the affected limb.
