HIV Partner Services Survey 2019

SUMMARY → DESIGN SURVEY → PREVIEW & SCORE → COLLECT RESPONSES → ANALYZE RESULTS → PRESENT RESULTS

Introduction

OMB number 0920-0879
Expiration date 1/31/2021

Dear Health Department Colleague,

HIV partner services (PS) is a core component of CDC-funded HIV prevention programs at local, state, and territorial health departments. The Program Evaluation Branch in the Division of HIV/AIDS Prevention at the Centers for Disease Control (CDC) is interested in understanding how HIV Partner Services (PS) programs are organized within a health department and how HIV PS activities are implemented by CDC-funded health departments. We will use this information to gain a better understanding of the structure and functions of HIV PS programs across CDC-funded health departments, identify gaps in services within PS programs, and provide enhanced PS technical assistance to state, territorial, and local health departments.

This assessment, which will take approximately 60 minutes to complete, will ask you about the current structure of your HIV partner services program, its functions, and its implementation processes. Please note that this is not an assessment of your organization's performance. Your participation is voluntary, and you can decline to respond to some or all questions in this assessment.

The assessment tool can be completed all at once or you can start it at one time and return to complete it later. If you have questions, please contact Dr. Michele Rorie at mrorie@cdc.gov.

Thank you very much for taking the time to complete the assessment and for sharing information about your partner services program.

Program Evaluation Branch
Division of HIV/AIDS Prevention, CDC

CDC estimates the average public reporting burden for this collection of information as 60 minutes per response, including the time for reviewing instructions, searching existing data/information sources, gathering and maintaining the data/information needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing burden to CDC/ATSDR Information Collection Review Office, 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333, ATTN: PRA (0920-0879).

HIV Partner Services Survey 2019

SUMMARY → DESIGN SURVEY → PREVIEW & SCORE → COLLECT RESPONSES → ANALYZE RESULTS → PRESENT RESULTS

Definitions and Participant Information

DEFINITIONS

For the purpose of this assessment, the following definitions apply:

Acute HIV infection: The phase of HIV-1 disease occurring immediately after transmission, during which HIV-1 RNA or p24 antigen are detectable in serum or plasma, but anti-HIV-1 antibodies are not detectable (i.e., HIV-1 antibody test result is negative or indeterminate).

Recent HIV infection: The phase of HIV-1 disease occurring up to six months after infection, during which detectable anti-HIV-1 antibodies develop, characterized by a current positive test for HIV-1, with a documented negative HIV test within the previous six months.

Established HIV infection or infection of unknown duration: HIV-1 disease in which anti-HIV-1 antibodies are detectable, but there is no evidence that infection occurred within the previous six months (e.g., there is no documentation of a negative HIV test within the previous six months).

Newly reported HIV infection: HIV infection that has not previously been reported to the health department's HIV surveillance program.

Previously reported HIV infection: HIV infection that has previously been reported to the health department's HIV surveillance program, and is subsequently reported again.

Goals, Organization, and Resources

2. Which of the following are **major** aims of your health department's HIV partner services activities? (Check all that apply.)

- Identify and intervene in **HIV transmission chains, networks, and clusters**
- Identify persons with **acute HIV infection and link them to care**
- Identify persons with **previously undiagnosed, established HIV infection, or infection of unknown duration, and link them to care**
- Identify persons with **previously diagnosed infection who are not in care and link them to care**
- Identify **HIV-negative persons at risk for infection and link them to PrEP**
- Identify **HIV-negative persons at risk for infection, who decline or are not eligible for PrEP, and re-test them periodically** (e.g., every 3-6 months, annually)

3. Where is the HIV partner services program **located** within your health department organizational structure?

- Within the HIV program only
- Within the STD program only
- Within both HIV program and STD program
- Within an integrated HIV/STD program
- Other (please describe in box below)
