

MSSICS Appeals Screens in Full Path Order

This is a summary document about MSSICS Appeals screens. It contains screen facsimiles and notes about each screen.

The screens are shown in full path order, as if every possible screen could be present for an appeal iteration. Most appeal iterations are very short. For example, a typical request for reconsideration for an initial disability issue contains only five screens.

The screen facsimiles are from the MSSICS Detailed Functional Requirements. The key to the screen values is:

X	User can enter alpha/numeric characters
9	User can enter numeric characters only
S	Prefilled by the system and cannot be overkeyed
P	Prefilled by the system and can be overkeyed
B	Sometimes prefilled by the system and if so, cannot be overkeyed
V	Sometimes prefilled by the system and may or may not be overkeyed. Sometimes completed by the user.

- AJAS collects your determination about the appeal iteration status. Status information on AJAS determines when Disposition (ADIS) is presented in the path.
- Referral information is also collected on AJAS. When you indicate that the appeal request has been referred to a Disability Determination Service (DDS) site, the system notifies the National Disability Determination Services System (NDDSS).
- When you indicate that the appeal request has been referred to a DDS site or to an Office of Disability Adjudication and Review site, it is assumed that you are forwarding the request with the case folder. The system notifies SSI Control System (SSICS) of the movement.
