SSI Event Detected:

*How did the outpatient facility (where the procedure was originally performed) detect/identify the SSI event? (select the method that *most closely resembles* the method of detection/identification)

The SSI was detected through the facility's formal active surveillance process:

- Review of patient's medical record
- Post-discharge surgeon survey
- Post-discharge patient letter
- Post-discharge patient phone call
- Patient returns to outpatient facility for follow-up
- Cooperative infection prevention process between facilities

The SSI was detected through a passive process that was not initiated by the facility:

- Patient/caregiver contacts facility to report
- Surgeon contacts facility to report
- Report from another facility (inpatient, health department, emergency department, etc.)
