PRIVACY THRESHOLD ANALYSIS (PTA)

The PTA is a compliance form developed by the Privacy Branch to identify the use of Personally Identifiable Information (PII) across the Department. The PTA is the first step in the PII verification process, which focuses on these areas of inquiry:

- Purpose for the information,
- Type of information,
- Sensitivity of the information,
- Use of the information,
- And the risk to the information.

Please use the attached form to determine whether a Privacy and Civil Liberties Impact Assessment (PCLIA) is required under the E-Government Act of 2002 or a System of Record Notice (SORN) is required under the Privacy Act of 1974, as amended.

Please complete this form and send it to your program Privacy Liaison Officer (PLO). If you have no program Privacy Liaison Officer, please send the PTA to the HUD Privacy Branch:

[3] Header: Information that is placed before the actual data. The header normally contains a small number of bytes of control information, which is used to communicate important facts about the data that the message contains and how it is to be interpreted and used. It serves as the communication and control link between protocol elements on different devices.
Payload data: The actual data to be transmitted, often called the payload of the message (metaphorically borrowing a term from the space industry!) Most messages contain some data of one form or another, but some actually contain none: they are used only for control and communication purposes. For example, these may be used to set up or terminate a logical connection before data is sent.
[4] FIPS 199 is the Federal Information Processing Standard Publication 199, Standards for Security Categorization of Federal Information and Information Systems and is used to establish security categories of information systems.
