PRIVACY THRESHOLD ANALYSIS (PTA)

The PTA is a compliance form developed by the Privacy Branch to identify the use of Personally Identifiable Information (PII) across the Department. The PTA is the first step in the PII verification process, which focuses on these areas of inquiry:

- Purpose for the information,
- Type of information,
- Sensitivity of the information,
- Use of the information,
- And the risk to the information.

Please use the attached form to determine whether a Privacy Impact Assessment (PIA) is required under the E-Government Act of 2002 or a System of Record Notice (SORN) is required under the Privacy Act of 1974, as amended.

Please complete this form and send it to your program Privacy Liaison Officer (PLO). If you have no program Privacy Liaison Officer, please send the PTA to the HUD Privacy Branch:

Marcus Smallwood, Acting, Chief Privacy Officer
Privacy Branch
U.S. Department of Housing and Urban Development

privacy@hud.gov

Upon receipt from your program PLO, the HUD Privacy Branch will review this form. If a PIA or SORN is required, the HUD Privacy Branch will send you a copy of the PIA and SORN templates to complete and return.

SPECIFIC PTA QUESTIONS

1. Reason for submitting the PTA:

Please provide a general description of the project and its purpose so a non-technical person could understand. If this is an updated PTA, please describe what changes and/or upgrades triggering the update to this PTA. If this is a renewal please state whether there were any changes to the project, program, or system since the last version.

This PTA is needed for the renewal of the Choice Neighborhoods (CN) information collection approval (PRA). A IPA (Initial Privacy Assessment) was completed previously (March 2015) for the program with the last PRA process. There have been no changes to the program since that prior IPA was done.

The Choice Neighborhoods grant program began in FY2010. It supports locally driven strategies to address struggling neighborhoods with distressed public or HUD-assisted housing through a comprehensive approach to neighborhood transformation. Local leaders, residents, and stakeholders, such as public housing authorities, cities, schools, police, business owners, nonprofits, and private developers, come together to create and implement a plan that transforms distressed HUD housing and addresses the challenges in the surrounding neighborhood. The program is designed to catalyze critical improvements in neighborhood assets, including vacant property, housing, services and schools.

Applicants and grantees include local governments, tribal entities, public housing agencies, nonprofits, and for-profit developers that apply jointly with a public entity (i.e., not individuals).

This information collection (PRA) renewal covers a variety of purposes related to the CN program. The information is required to allow HUD to conduct competitions to award and obligate Choice Neighborhood grant funds in accordance with the appropriations act and to manage/report on the grants that are awarded.

For applications, Grants.gov is used. For other program-related information collections, email and attachments are used as well as an on-line reporting system.

³ HUD defines personal information as “Personally Identifiable Information” or PII, which is any information that permits the identity of an individual to be directly or indirectly inferred, including any information that is linked or linkable to that individual, regardless of whether the individual is a U.S. citizen, lawful permanent resident, visitor to the U.S., or employee or contractor to the Department. “Sensitive PII” is PII, which if lost, compromised, or disclosed without authorization, could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. For the purposes of this PTA, SPII and PII are treated the same.

⁴ Header: Information that is placed before the actual data. The header normally contains a small number of bytes of control information, which is used to communicate important facts about the data that the message contains and how it is to be interpreted and used. It serves as the communication and control link between protocol elements on different devices.

Payload data: The actual data to be transmitted, often called the payload of the message (metaphorically borrowing a term from the space industry!) Most messages contain some data of one form or another, but some actually contain none: they are used only for control and communication purposes. For example, these may be used to set up or terminate a logical connection before data is sent.
