

**Mobile Messaging Intervention to Present New HIV Prevention Options for Men Who have Sex with Men (MSM): Randomized Controlled Trial**

OMB# 0920-1209 (17AX)

**Change Request Justification**

TERMS OF CLEARANCE: Approved consistent with the understanding that CDC will not provide incentives to individuals who are ineligible to participate in the study.

Within 6 months, CDC will clarify the applicability of its privacy responsibilities, described in OMB circular A-130 and 5 USC §552a(e)(3), to this information collection. CDC will document the reasons it has determined that a Privacy Act system records notice, Privacy Act statement, and privacy impact assessment are or are not required, and submit such documentation as deemed necessary to OMB as a change request within 6 months of the date of approval for the current ICR.

This change request is being submitted by CDC to request OMB lift the Terms of Clearance requirement that relates to the applicability of the privacy act for this project. The required PIA review has been completed and the signed PIA is being submitted to demonstrate the fulfillment of the OMB requirement. The program is requesting that OMB lift their prior term and permit the study to operate as submitted.

There are no changes in the collection or burden.
