STD, & TB Prevention

CDC Data Systems

Rules of Behavior for the Use of CDC Data Systems

Agency Users

July 2011

Sensitive but Unclassified (SBU)

This document contains information that may be exempt from public release under the Freedom of Information Act (FOIA) (5 U.S.C. 552), exemption 2 applies. Approval by the Centers for Disease Control and Prevention Document Control Officer (OSEP) and the CDC FOIA Officer, prior to public release via the FOIA Office is required.

This document was prepared by the Data System and Analysis Team (Shubha Rao, swr2@cdc.gov and John Beltrami, hzb3@cdc.gov).

1. Introduction

1.1 Purpose and Scope

The purpose of this “Rules of Behavior for CDC data systems Agency Users” (ROB-AU) is to provide users of CDC data systems users guidelines for policies and practices related to National HIV Prevention Program Monitoring and Evaluation (NHM&E) data and web-based reporting. All grantees using CDC data systems should review the topics discussed in this guide and sign it. Additional rules of behavior may be appended if required by state or local law or are otherwise necessary.

For purposes of this document, the term “CDC data systems” refers to CDC-funded Information Technology (IT) systems used for collecting and reporting NHM&E data.

CDC data systems are browser-based software systems for reporting NHM&E data. CDC data systems are made available to CDC grantees who wish to use them for data collection and reporting.

The information presented within this ROB addresses the:

- Scope, boundaries, and applicability of the system rules
- Governing law and policy applicable to the system
- Statements of policy related to expected Agency Users’ behaviors and responsibilities
- Broad range of consequences possible for policy violation
- Descriptions of CDC data systems Agency Users’ responsibilities
- Listing of any system-specific prohibited actions
- Process for obtaining system help and a listing of additional resources
- Process for publishing and acknowledging revisions
- Formal acknowledgement and agreement mechanism (signature)

1.2 Legal, Regulatory, and Policy Requirements

CDC data systems are part of the CDC System Enterprise Architecture and are held to a high standard of performance with regard to security. The following standards were applied to CDC data systems:

Standards Required by Law for Federal Systems

- Clinger-Cohen Act of 1996 (Public Law 104-106)
http://www.cio.gov/documents_details.cfm/uid/1F432CB6-2170-9AD7-F2F9BFC351F83400/structure/Laws,%20Regulations,%20and%20Guidance/category/IT%20Related%20Laws%20and%20Regulations

- OMB Budget Circular A-130, Appendix III, Security of Federal Automated Information Resources
http://www.whitehouse.gov/omb/circulars_a130_a130appendix_iii
- Federal Information Security Management Act (FISMA)
<http://csrc.nist.gov/groups/SMA/fisma/index.html>
- HHS Information Security Program Policy HHS-IRM-2004-0002
<http://www.hhs.gov/ocio/policy/2004-0002.001.html>
- National Institute of Standards and Technology Special Publications 800 Series <http://csrc.nist.gov/publications/PubsSPs.html>
- Executive Orders, Directives, Regulations, Publications, Guidance(s)

Compliance requirements for the operation of CDC data systems include participation in the following processes and filing/signing the relevant documents:

- Certification & Authentication (C&A) process
- CDC Capitol Planning Investment Control (CPIC) OMB reporting
- Enterprise System cataloging
- Various service agreements that must be executed

Agencies may be required to meet additional data security requirements based on current legal, regulatory, and policy requirements for the C&A process.

With respect to these laws and regulations, prohibited uses include:

- Accessing or inappropriately using information which is protected by the Privacy Act, other federally mandated confidentiality provisions, and/or by OMB Circular A-130, Management of Federal Information Resources
- Violating copyrights or software licensing agreements

1.3 Statement of System Policy

Each user is responsible for helping to prevent unauthorized use of, and access to, system resources. This duty includes complying with all stated policy requirements, taking due care and reasonable precautions when handling system data or using system resources, and in the management and protection of system authentication controls (e.g., passwords, certificates, etc.). When in doubt, users are strongly encouraged to contact their local CDC data system administrator or the system help desk for assistance.

1.4 No Expectation of System Use Privacy

CDC or local Agency System Administrators may periodically monitor both the system and user activities for purposes including, but not limited to, troubleshooting, performance assessment, usage patterns, indications of attack or misuse, and the investigation of a complaint or suspected incidents or security breaches. Users are provided system access for the purpose of facilitating federal, state, local, and agency public health missions.

1.5 Penalties for Non-Compliance

Users who do not comply with the prescribed ROB are subject to penalties that can be imposed under existing policy and regulation including reprimands, suspension of system privileges, and suspension from duty, termination, or criminal prosecution.

2. User Responsibilities

2.1 Ethical Conduct

Users of CDC data systems are only permitted to access: the data that they enter, the data that belong to their individual organization, and specific data to which they have been given rights. Using system resources to copy, release, or view data without authorization is prohibited. Altering data improperly or otherwise tampering with the system is prohibited. Staff authorized to access client-specific data are responsible for the protection of confidential information and must report any breaches.

2.2 Authentication Management

Access to NHM&E data files and CDC data system software must be restricted to authorized users. Users will be assigned a user account, limiting activities within the system. The Agency System Administrator will terminate access if employees leave, change jobs, or breach agency policies. Users who share the same computer must have separate logins and secure data network security certificates. Authentication requirements will be determined based on the security level assessed for the data system or application by CDC's Office of the Chief Information Security Officer (OCISO). Users of these applications or data systems are required to comply with authentication requirements by OCISO. The Agency System Administrator will be responsible for ensuring that all staff members that use the application meet all authentication requirements.

2.2.1 Granting Access

The Agency System Administrator grants access to staff requiring use of CDC data system software or NHM&E data. The steps in this process for CDC grantees that choose to use CDC data system software are as follows:

- Application for a security certificate
- Application for CDC data system access (to include a letter from Agency System Administrator)

This is usually done in writing through the user's supervisor and should include a description of the user's duties related to CDC data systems. Once a certificate is granted, the Agency System Administrator establishes an account with levels of access and permissions for that user which should only be necessary to perform their required duties. Users are assigned a user ID and a means of authenticating who they are, such as a password. An Agency System Administrator's responsibility also includes restricting access to parts of CDC data systems according to the role of the user, modifying access within the system when a user's duties change, and terminating access when employees leave, change jobs, or breach agency policies.

Users of CDC data systems who have access to confidential data or secured areas should sign binding, non-disclosure agreements before being given access to CDC data systems (trainings in the policy and procedures concerning security and confidentiality are also highly recommended).

2.2.2 Levels of Access

The Agency System Administrator is responsible for restricting access to parts of CDC data systems according to the role of the user and modifying access within the system when a user's duties change. All users do not need access to all parts of the system. Access to the various parts of CDC data systems should be restricted based upon the role of the user. For example, typical roles include data entry, generating reports, system administration, and viewing information. Some people may need to read information about clients but not enter data. Others may need to analyze aggregated data but not view case-specific information. Your Agency System Administrator will assign the roles and access rights for you.

2.2.3 Terminating Access

As soon as it becomes known that an individual is changing duties within an agency, leaving the agency, or has breached agency policies, their access will be modified or terminated. The job-transition protocol of the agency should include immediate notification to the CDC data system administrator of any change in

employee status so that the proper actions can be taken to protect the system and its data.

2.2.4 Use of Passwords

Passwords must be used to confirm user identity. Passwords should be changed periodically (at least every 60 days) and not shared among staff. Separate passwords may also be used to protect specific data sets or applications within the system. For example, a user may need to enter their individual password to get access to the system, but then may need to enter a second, different password in order to get access to information about a certain set of clients. The CDC data system password policy is that the passwords should be at least 8 characters long, contain a mix of at least three of the four types of keyboard elements (i.e., upper case letters, lower case letters, numerals, and punctuation marks), and cannot be the individual's name.

2.2.5 Administration of Proxies

CDC data systems provide the ability to identify and assign proxies (i.e., the ability to assign one person's permissions to someone else). Although multiple users can be granted proxies for an individual, only one user can log in at a time, as a proxy of another user. Only an Agency System Administrator has permission to grant and delete a proxy. Rules should be developed at the site level to determine how long proxies may last and how they should be administered. All users will comply with the rules of proxy administration.

2.3 Information Management and Document Handling

At the local level, data collection for NHM&E variables may not only exist on the CDC data system servers. These data may also be on data collection forms or counselor notes, client files, CD-ROMs, personal digital assistants (PDAs), or other information storage media. Since all of these types of media may contain confidential information, the agency must develop policies and procedures for the use, storage, transmission, and disposal of data for each medium used to record or store NHM&E data.

The computers (desktop and laptop), PDAs, servers, and other electronic equipment used to collect, enter, copy, store, analyze, or report NHM&E data should be under the control of the grantee. The use of equipment related to CDC data systems, including internet connections, e-mail, photocopiers, facsimile machines, and other equipment that might be used to copy, transmit, or process NHM&E data should be regulated by written policies and procedures. The policies should require that computers have screensaver locks that automatically engage when the computer is not used for a set brief time period and should

require that personnel electronically lock their computers when they leave their desk. In Windows this is done by depressing the Ctrl, Alt, and Delete keys simultaneously, then depressing the Enter key.

2.3.1 Storage

Agencies should establish policies and procedures that outline when it is appropriate to export NHM&E data to password protected and encrypted storage media. All storage media should be clearly labeled. Removable media such as zip disks, CD-ROMs, etc., should be destroyed or sanitized with disk wiping tools before reuse or disposal. Storage media, whether removable or fixed, paper or electronic, containing NHM&E data should be stored in a secured area. Data removed from secured areas for analysis should be de-identified first. Personal disks, laptops, thumb drives, and other storage media must not be used to store confidential NHM&E data. When used for data storage, these devices must contain only the minimum non-confidential data necessary to perform a given task, must be encrypted or stored under lock and key when not in use, and (except for backups) be sanitized immediately following the task completion. Cleaning crews, maintenance staff, and other unauthorized personnel must be escorted into secured areas by designated staff. Encryption of data during storage is recommended.

2.3.2 Disposal

Many states have laws or regulations concerning how long client records must be stored, and when and how they must be destroyed. Agencies must develop policies and procedures that comply with these state regulations. When client records are to be destroyed, these should include not only paper records but also electronic records. Please note that “deleting” a file or record on the computer does not actually remove the information from the system. Even overwriting or formatting the media may not sanitize it; special sanitization programs or physical destruction of the storage media may be required. Agencies must be sure to sanitize or destroy hard drives of computers scheduled for disposal or transfer to staff not authorized to use CDC data systems.

2.3.3 Release of Data

Agencies must develop a written policy and procedure for releasing data. This policy should be periodically reviewed and modified to improve the protection of confidential information. Policies concerning the release of de-identified and aggregate data that prevent indirectly identifying clients through small denominators should also be established. Access to any data containing confidential information or case-specific data should be contingent on having a signed, current, binding non-disclosure agreement currently on file at the

individual agency. These agreements must include discussion of possible employee ramifications and criminal and civil liabilities for unauthorized disclosure of information.

Reporting Data to CDC: Reporting data to CDC should be done according to the schedule specified by CDC. While data may be entered into CDC data systems at any time, it is not reported to CDC until the appropriate files are submitted to CDC through a secure data network by the authorized personnel of each agency. Policies and procedures should be developed to specify the data quality assurance process being implemented and the administrative approval process being followed prior to reporting/submitting data to CDC.

Releasing Data to Partners: In order to assist other agencies in tracking referrals or for other related public health purposes, agencies may enter into agreements with other agencies to share limited information about specific clients. Data sharing should be based upon written agreements and clients should be advised on how their confidential information will be managed and/or shared with other agency partners. Agencies must develop policies and procedures to comply with state regulations regarding release of data.

Releasing Data to the Public: Except under conditions specified in writing and explained to clients, only authorized staff members who have signed a binding non-disclosure agreement (and who have a need to know) should be allowed access to sensitive client-identifying data. Agencies should have a policy and protocol for releasing de-identified and aggregate data for use in analysis, grant applications, reporting, and administrative functions. This policy should specify what data may be released, in what form, to whom data may be released, and who may approve the release of data.

2.3.4 Encryption

NHM&E data are sensitive, confidential information that may have legal and personal implications for clients; therefore, data should be protected from unauthorized access. NHM&E data should always be encrypted during transmission and often should be encrypted during storage, such as during collection in the field. Data transmitted to the CDC through the secure data network are secured through the use of several security controls. However, it is the responsibility of the grantee to assure security until data are submitted to the CDC.

If an organization decides to send data to anyone other than CDC, those data should be encrypted. NHM&E data scanned into the CDC provided scanning data tools should be encrypted and sent to the CDC via a secure data network (for reference, this scanning tool will be retired and may not be applicable for

future data submissions). All data should remain encrypted until entering the CDC network and reaching the secure data network staff at which time the data are decrypted.

The following is a list of client variables that will be encrypted in CDC data systems.

Client Information

G105 - Last Name
G106 - First Name
G107 - Middle Initial
G108 - Nick Name
G109 - Aliases
G110 - Date of Birth-Month
G111 - Date of Birth-Day
G125 - Physical Description
G128 - Address Type
G129 - Street Address 1
G130 - Street Address 2
G131 - City
G132 - County
G133 - State
G134 - Zip Code
G135 - Phone Number (Day)
G136 - Phone Number (Evening)
G137 - Primary Occupation
G138 - Employer
"Table G1 Notes"

Partner Information

PCR203 - Last Name
PCR204 - First Name
PCR205 - Middle Initial
PCR206 - Nickname

PCR210 - Date of Birth-Month
PCR211 - Date of Birth-Day
PCR219 - Physical Description
PCR220 - Address Type
PCR221 - Street Address 1
PCR222 - Street Address 2
PCR223 - City

PCR224 - State
PCR225 - Zip Code
PCR226 - Phone Number (Day)
PCR227 - Phone Number (Evening)
PCR228 - Primary Occupation
PCR229 – Employer
"Table PCR2 Notes"

2.3.5 Backing Up Data

CDC regularly backs up all NHM&E data stored on CDC database servers. CDC data system data that are not yet transmitted, either because they have not yet been entered in the system or because the data are not being stored on CDC servers, must be backed up periodically by the grantee. Frequency of backup should depend upon how often the data change and how significant those changes are, but should be done based on a fixed schedule that is part of the normal maintenance of the system. Backup copies should be tested to make sure they are actually usable; copies should be stored under lock and key in a secure area and a separate copy of data kept at a secure off-site location if possible.

2.4 System Access and Usage

2.4.1 Portable Equipment

While the use of portable computers has its advantages, it also creates additional security risks, such as loss or theft of the computer and data it stores. If computers are used outside the office, agencies should establish policies regarding physical security (e.g., the computer should be locked to an immovable object), and digital security (e.g., the computer should be protected with a unique username, complex password, and sensitive data should be encrypted). Laptop computers and other portable hardware that receive NHM&E data should store those data in encrypted formats. Laptops should employ whole disk encryption in order to protect any sensitive data that may be stored on the hard drive. No security certificates for CDC data systems should be saved or stored on portable media.

2.4.2 Physical Security of Equipment

CDC data system Agency System Administrators should maintain an inventory of all system hardware and software provided to system users, and periodic audits should be conducted to account for all assets. Visitors or unauthorized personnel should not be allowed unescorted access to areas containing computers holding NHM&E data. All computer equipment should be protected by surge suppressors and emergency battery power to prevent data loss in case of fluctuations in the power supply. All computers and other equipment used for CDC data systems should be housed or stored in secure areas and physically attached to an immovable object, if possible. All rooms where NHM&E data are stored in computers or on paper or other storage media should be locked at all times when not in use, and it should be known with whom the keys reside.

2.4.3 Dial-Up Access

The grantee must develop and document a policy regarding dial-up or other external access to their work location computer system for the purposes of accessing CDC data systems or NHM&E data. Since the CDC data systems contain sensitive, confidential information, dial-up or other external access to the system is strongly discouraged as this creates more opportunities for unauthorized often malicious intrusion into the system. If external access is permitted, it should be restricted to the minimum number of persons possible, and additional security measures should be taken to ensure identification and authentication to obtain access in addition to restricting access to as few as possible.

2.4.4 Locking Workstations

All users should secure their workstations before leaving them. Automatic screen saver locks should also be set to engage whenever the system is left idle (e.g., 15 minutes of inactivity). In order to unlock the screensaver, the system should require entry of the user's ID and password.

2.4.5 Disable Browser Password Caching

All CDC data system users will be accessing the application through a web browser (i.e., Internet Explorer) and should disable the ability of their web browser to cache (save) their passwords. This will prohibit others who use your computer to have access to passwords or forms with personal information that the web browser has cached for you. To disable this option, open a new Web browser, and select Internet Options from the Tools menu.

2.5 Incident Reporting

2.5.1 Breaches of Confidentiality

A breach of confidentiality is any failure to follow confidentiality protocols, whether or not information is actually released. This includes a security infraction that results in the release of private information, with or without harm to one or more individuals. All suspected or confirmed breaches of confidentiality or security involving personally identifiable information (PII) such as names, addresses, identification numbers, dates (except year), etc. should be reported to the CDC Information Systems Security Officer (phone 404.639.1806; e-mail:rxv2@cdc.gov) and the CDC Division of HIV/AIDS Prevention (DHAP) Program Evaluation Branch (PEB) Data Security Steward (phone: 404-639-0938; e-mail: dad5@cdc.gov) **within one hour of discovery**. All other suspected breaches of confidentiality or security (e.g., possible viruses, hackers, password divulgence, lost or misplaced storage media without PII, failure to follow secure storage policies, etc.) should be reported immediately to the Agency System Administrator. The Agency System Administrator will determine the cause, develop and implement process improvements, and/or determine if the incident should be reported to the CDC Information Systems Security Officer and DHAP PEB Data Security Steward. In determining whether a non-PII breach of NHM&E data or records should be reported to CDC, Agency System Administrators should consider reporting such breaches to CDC if there is a strong possibility that PII will be breached, CDC data and data systems will be compromised, or that CDC's public health mission will be negatively impacted.

At the local level, sanctions for violations of confidentiality protocols should be established in writing, as part of the organizational policies, and should be consistently enforced.

2.5.2 Unauthorized Intrusions

Any computer attached to the Internet, such as a CDC data system computer, is subject to unauthorized intrusions, such as hackers, computer viruses, and worms. In addition, authorized users may attempt to access parts of the system for which they do not have access authority. Grantees must take all reasonable precautions to protect their systems from these types of unauthorized penetrations. A plan must be developed and implemented to prevent and, if necessary, recover from changes to the system caused by unauthorized penetrations of the computer system. Typical precautions include using effective passwords, installing firewalls and currently updated anti-virus software, making backup copies of software, saving data at regular intervals so that the system can be restored to a previous state, and training staff in basic computer security (such as keeping passwords secret and not downloading materials from the Internet or other unauthorized software onto computers that have CDC data system access).

2.6 Training and Awareness

All agency staff dealing with NHM&E data and the CDC data systems should be trained on policies and procedures established by the agency, the legal aspects of data collection, and the ethics of their responsibility to the clients. Every new employee who requires access to NHM&E data and resources must complete data security training conducted by your agency before access is granted. Current employees are also required to complete a refresher course on data security every year. All data security trainings should cover state regulations and the agency's policies concerning confidentiality, computer security, and legal obligations under non-disclosure agreements. Grantee staff should be aware of common threats to confidentiality and security, contingency plans for breaches of confidentiality and security, and the penalties associated with breaches of confidentiality and security. Each agency staff member with access to NHM&E data should receive CDC data systems training, including security updates.

Personnel are as much a part of a data collection and reporting system as computer hardware and collection forms. People are usually the weakest link in any security system. Each agency should have a policy on NHM&E data confidentiality and security. The confidentiality and security policy must explain that authorized users are responsible for knowing the confidentiality and security policies and procedures, challenging unauthorized users, reporting possible breaches, and protecting equipment and data. Staff should be required to

annually sign a statement acknowledging that they have been made aware of the confidentiality and security requirements for the agency. The signed statement should be kept in the employee's file.

2.7 CDC Data Systems Security Agreements

In an effort to provide maximum protection of the data that are entered into CDC data systems, in addition to the physical and system security measures explained in this document, there will also be an ROB for CDC Data Systems Agency System Administrators covering all of the additional duties of the System Administrator. CDC will also be executing a Memorandum of Understanding (MOU) with each directly funded grantee organization.

3. User Assistance and Additional Resources

For assistance in using CDC data systems, contact your local CDC data system administrator or the NHM&E Service Center at pemsservice@cdc.gov or 1-888-PEMS-311 (1-888-736-7311).

4. Revisions and Renewal

Revisions to this document will be released as needed. Notifications of the availability of the revised documents will be made through the CDC data systems announcement function and other established communication channels. Unless notified otherwise, it will be assumed that all grantees using CDC data systems accept the revisions. Comments and concerns should be sent to the NHM&E Service Center at pemsservice@cdc.gov.

5. Acknowledgement and Agreement of Rules of Behavior for CDC Data Systems Agency Users

I have read and agree to comply with the terms and conditions governing the appropriate and allowed use of CDC data systems and NHM&E data as defined by this document, applicable agency policy, and state and federal law. I understand that infractions of these rules will be considered violations of CDC and agency standards of conduct and may result in disciplinary action, including the possibility of supervisory notification, official reprimand, suspension of system privileges, suspension from duty, termination, and/or criminal and civil prosecution.
