Question

Answer

1 OPDIV:

2 PIA Unique Identifier:

2a Name:

3 The subject of this PIA is which of the following?

- General Support System (GSS)  
 Major Application  
 Minor Application (stand-alone)  
 Minor Application (child)  
 Electronic Information Collection  
 Unknown

3a Identify the Enterprise Performance Lifecycle Phase of the system.

3b Is this a FISMA-Reportable system?

- Yes  
 No

4 Does the system include a Website or online application available to and for the use of the general public?

- Yes  
 No

5 Identify the operator.

- Agency  
 Contractor

6 Point of Contact (POC):

POC Title POC Name POC Organization POC Email POC Phone 

7 Is this a new or existing system?

- New  
 Existing

8 Does the system have Security Authorization (SA)?

- Yes  
 No

8a Date of Security Authorization

11 Describe the purpose of the system.

The GISP Project was established in 1986 to monitor trends in antimicrobial susceptibilities of strains of Neisseria Gonorrhoea (N. gonorrhoea) in the United States and to establish a rational basis for the selection of gonococcal therapies. GISP is a collaborative project between selected Sexually Transmitted Diseases (STD) clinics, five regional laboratories, and the Centers for Disease Control and Prevention (CDC).

12 Describe the type of information the system will collect, maintain (store), or share. (Subsequent questions will identify if this information is PII and ask about the specific data elements.)

In GISP, N. gonorrhoea isolates are collected from the first 25 men with urethral gonorrhoea attending STD clinics each month in approximately 28 cities in the United States. No identifiable information is collected or maintained.

13 Provide an overview of the system and describe the information it will collect, maintain (store), or share, either permanently or temporarily.

GISP was established in 1986 as a collaborative project to collect antimicrobial susceptibilities of gonorrhoea from 27 select STD clinics and 5 regional labs monthly. It monitors trends in antimicrobial susceptibilities of strains of Neisseria Gonorrhoea in the United States and establishes a rational basis for the selection of gonococcal therapies.

Data maintained is forwarded from the State Health Departments to the CDC for surveillance statistical analysis only. GISP focuses on N. gonorrhoeae isolates that are collected from the first 25 men with urethral gonorrhoea attending STD clinics each month in approximately 28 cities in the United States.

No personal identifiers are maintained.

14 Does the system collect, maintain, use or share PII?  Yes  No

General Comments

Changes since the last PIA:  
 1- System name has been changed since last PIA (previous name: Gonococcal Isolate Surveillance Project (GISP)).  
 2- System previously stored DOBs (the only PII that was being collected and maintained), but the System Manager has determined since the last PIA that DOBs are no longer needed; consequently, these identifiers have been deleted consistent with the Records Schedule. No personal identifiers are now being collected/stored/maintained.
