

**ATTACHMENT 6:
ANTHRAX GET VACCINATED FACT SHEET**

Public reporting burden of this collection of information is estimated to average sixty minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB Control Number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/ATSDR Reports Clearance Officer, 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333; ATTN: PRA 0920-0572

Get Vaccinated Against Anthrax

FREE anthrax vaccine is now available

CDC recommend vaccination for people 6 weeks of age or older who may have come in contact with anthrax. For the best protection, CDC recommend getting the anthrax vaccine and taking all antibiotics given by officials.

What you need to do

1. Get the vaccine as soon as you can

The vaccine comes in a series of 3 shots given over 4 weeks.

- Get shot 1 – wait 2 weeks
- Get shot 2 – wait 2 weeks
- Get shot 3 and you're done

If there is a shortage of anthrax vaccine, public health officials may recommend getting the shots on a different schedule.

2. Keep taking antibiotics

Keep taking the antibiotics you were given, even while you are getting your shots. If you miss a dose, take it as soon as you remember, and then continue to take the medication on schedule.

The anthrax vaccine and antibiotics together are the best protection against anthrax. Do not stop taking the antibiotics you were given unless directed to by officials.

Find out where to get anthrax vaccine

- Listen to the radio
- Listen to your local news
- Call [Enter phone number]
- Go to [Enter URL]
- Go to [Enter locations]
