Data Elements Listing Enhanced STD Surveillance Network (SSuN) OMB# 0920-1072

Public reporting burden of this collection of facility component information is estimated to average 3 hours per response; these data elements were developed collaboratively and agreed upon by members of eSSuN and do not include information beyond what is routinely collected from patients during the clinical visit. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: CDC, Project Clearance Officer, 1600 Clifton Road, MS D-74, Atlanta, GA 30333, ATTN: PRA (0920-1072). Do not send the completed form to this address.

This data element should not be 'null' or contain missing values. This should be coded as a 'SAS' numeric date.	
7		P1_RecSx	Was lab or provider report how case was initially reported to the health department? This data element is intended to capture the source of the initial case notification to the health department. 	0=STD Registry 1=HIV Registry 2=Viral Hepatitis Registry 3=Other Disease Registry 4=Unknown	
10	P1_HregMatch 1=Yes 2=No	Was eHARS registry match done for this patient? This data element may be initially coded as '2' if the grantee conducts a batch match with their HIV registry and the case is reported before that batch is processed. This information can be updated in the SSuN record in the next data transmission following the match. This data element should not be 'null' or contain missing values.
11	P1_HregMatchStat	Did this patient match a registry entry in eHARS? This data element may be initially coded as '3' if the grantee conducts a batch match with their HIV registry and the case is reported before that batch is processed. This data element should not be 'null' or contain missing values. 1=Matching Record Found 2=No Matching Record
12	P1_HDXMOYR	3=Match Not Performed What is this patient's earliest indication of HIV positive result? This information can be obtained from the eHARS person table (HIVPMOYR). If eHARS match found. This should be coded as character data ("MM/YY") with missing information as "/." or "/YY"
13	P1_Othno	Additional registry number If this patient also has a record in other/ancillary disease registries. This is primarily for local use in matching patient records to update missing information.

17	P1_CaseDup	Is this record/case a duplicate report, new report or was duplicate status not determined? The grantee should document if an initial case report was subsequently found to be a duplicate of an existing case – the record should be retained in the SSuN dataset and coded as a duplicate ('1')? If the jurisdiction receives a report that they know to be a duplicate at the time of report, the record can be omitted from the SSuN datasets and not sampled for enhanced investigation. This data element should not be 'null' or contain missing values.
		1=Duplicate Case (previously reported <15 days) 9=Unknown, site surveillance system does not capture
18	P1_FacilityID	Site generated facility ID. Each reporting provider/facility must have a This is a primary key for linking the provider type and other provider information to the case record. Historically, the majority of cases in any grantee's jurisdictions will be reported from known providers, but for cases reported from entirely new or unknown providers, this field should be populated with that facility's new number and be included in the next update of the provider reference file. This data element should not be 'null' or contain missing values.
