Part B - Collections of Information Employing Statistical Methods

Question 1. Universe and Respondent Selection

The Basic CPS universe is 114 million households. From the universe of 114 million, we select a sample of approximately 60,500 households. With the SCHIP general expansion, this increased to 72,000 households each month. Of these, approximately 59,000 households will be eligible for interview; and we will actually interview approximately 55,000 households.

The ASEC sample expands upon the Basic CPS sample by adding select households. Approximately 6,000 Hispanic households interviewed in the previous November CPS will be added. We expect to interview approximately 4,500 of these households. Additionally, we will add approximately 8,800 minority and White (with children) households that were interviewed in November. We expect to interview about 6,500 of these households. Finally, we will conduct the ASEC to selected minority and White (with children) households during February and April. These households will be “borrowed” from the February outgoing and the April incoming rotation groups. We expect to select approximately 12,800 such households, with about 12,000 actually being interviewed. This brings us to a total of approximately 78,000 households planned for interview in fiscal year 2019.

We use a household respondent to answer the supplement items for all household members 15 years of age or older. The response rate for the ASEC averages 85 percent.

Question 2. Procedures for Collecting Information

This is a supplemental survey associated with the CPS. Attachment B gives an overview of the CPS sample, design, weighting methodology, and response rates. The statistical properties of these supplemental items will fall within those associated with the CPS itself.

Question 3. Methods to Maximize Response

Response rates and data accuracy for the CPS are maintained at high levels through computer edits, interviewer instruction and training, and close monitoring of the data. Refer to "Overview of CPS Design and Methodology," item 5, for a discussion of CPS nonresponse (Attachment B).

Some amount of allocation for item nonresponse is done within the ASEC supplement for eligible people. Item nonresponse rates range from less than 2 percent for the work experience items to more than 40 percent for some of the income items, such as interest and dividends. For the cases eligible for the 2017 ASEC, the basic CPS household-level nonresponse rate was 13.5 percent. The household-level nonresponse rate for the ASEC was an additional 14.0 percent. These two non-response rates lead to a combined supplement nonresponse rate of 25.6 percent.

Question 4. Tests of Procedures or Methods

There are currently no methodological or questionnaire tests in progress.

Question 5. Contacts for Statistical Aspects and Data Collection

The following individuals may be contacted on the statistical, data collection, and analysis operations:

Statistical Collection Operations:

Lisa A. Clement

Survey Director, Current Population and American Time Use Surveys

Office of the Associate Director for Demographic Programs

U.S. Census Bureau

Washington, DC 20233-8400

(301) 763-3806

Survey Content:

Sharon Stern

Social, Economic, and Household Statistics Division

U.S. Census Bureau

Washington, DC 20233-8500

(301) 763-5638
