Change Request for Clostridium difficile (C. difficile) Laboratory Practice Survey (Improving the Impact of Laboratory Practice Guidelines: A New Paradigm for Metrics- American Society for Microbiology;

OMB Control # 0920-1096)

Nonmaterial/ non-substantive changes are requested for the 2018 *Clostridium difficile (C. difficile) Laboratory Practice Survey* instrument, which is part of the OMB-approved information collection (Title: Improving the Impact of Laboratory Practice Guidelines: A New Paradigm for Metrics- American Society for Microbiology. OMB Control # 0920-1096; Exp. Date 01/31/2019) and was submitted as Appendix M5: *Clostridium difficile (C. difficile) Laboratory Practice Survey* in the information collection request. Justification for the non-substantive change request are described below and detailed in the chart that follows. There are no requested changes in the purpose of the project, the scope of the study, the methodology, statistical methods, the interpretation of the results, or significant changes to the respondents, the information collection instrument, or burden.

All changes being requested to the survey instrument are minor ones including reformatting 8 questions editing/adding a response category to 7 questions, deleting 1 question, reordering 1 question, and adding a few questions. The reasons for these changes is that our results from another survey "Urine Collection, Storage and Preservation Laboratory Practice Survey" (also approved under OMB # 0920-1096) indicated that several questions needed additional clarity by refining the response options because answers to the same question in that survey revealed that the responses were not specific enough to identify the type of institutions respondents worked in. Therefore, similar questions have been edited for clarity and a "Do Not Know" option to all relevant response categories was included. Additional changes include the addition of new questions including asking about the newly published guideline "A Laboratory Medicine Best Practices Systematic Review and Meta-Analysis for the Laboratory Diagnosis of *Clostridium difficile*" which was not available when the current OMB approval was obtained.

The currently approved data collection instrument (Appendix M5) is attached along with the requested revised data collection instrument (pdf file).

Form	Current Question/Item	Requested Change
Clostridium	Question 4: How did you	EDITING/ADDING RESPONSE CATEGORY TO
difficile (C.	learn about this survey? (6	QUESTION
difficile)	choices)	Choice 4 changed from Clinical Microbiology
