This question wording and response options are modeled after the question to assess last use of cigarettes (question 9). Following questionnaire vetting by sister organizations, we have agreed to edit from "puffs" to "times". Additionally, given the transition to an electronic survey, we request to introduce skip-instructions following this question, where those who have not used an e-cigarette in the past 30 days (choices D-G) will skip the questions related to e-cigarette behaviors during this period. R, M	Reinstated (modified) question from 2016 NYTS.	<p>In response to the OMB terms of clearance (<i>"In response to the most recent public comments suggesting more updated question options for cigars and e-cigarettes, CDC will evaluate the suggestions for incorporation prior to the next expected NYTS revision request in 2019."</i>), we request to reinstate a question to assess the type of e-cigarette currently used among respondents. The previous question (NYTS 2016) was edited to reflect the evolving e-cigarette marketplace for 2019. The question below was cognitively tested for the PATH study, with minor modifications to option B for the NYTS (adding "pods" language). "Pods" is a term used by JUUL and increasingly by other manufacturers to describe the prefilled cartridges of "pod mod" type e-cigarette devices. Additionally, following questionnaire vetting by sister organizations, we have agreed to add a brand example (e.g. JUUL) to option B to increase the validity of this "rechargeable" response option. Brand descriptions are not possible for other response options, as no major brands would fit exclusively in those categories – all major tobacco companies have brands that extend across types (disposable and rechargeable). The new questions is below:</p> <p>39. Which of the following best describes the type of e-cigarette you have used in the past 30 days? N	<p>Not applicable, new question</p>	<p>In response to the terms of OMB clearance ("<i>...will be revised to maintain relevance with emerging tobacco use behaviors and control policies</i>") and the rapidly changing tobacco landscape, we request to add the following preamble and 3 questions on heated tobacco products. These products are currently not available for sale in the United States, but are available in other markets. Heated Tobacco Product manufacturers have submitted proposals to the FDA to be able to market and sell these products in the United States under the label of modified risk tobacco products (MRTP). Thus, it is important to assess the baseline awareness and current use behaviors of these products among youth before they are widely available on the U.S. market.</p> <p>INSTRUCT_8: The next section is about "heated tobacco products", also referred to as "heat-not-burn" tobacco products. Heated tobacco products heat tobacco sticks or capsules to produce an aerosol or vapor. They are different from e-cigarettes, which heat a liquid to produce an aerosol or vapor. Some brands of "heated tobacco products" include IQOS, glo, and Eclipse.</p>

Option choice “K” has been modified slightly to reflect that only current tobacco product users are asked this question. We also request to include a skip instruction. If the respondent does not report using any flavored products (option “K”), they will skip the follow-up question on specific flavors used. The modified skip pattern and question is below:</p> <p>61. N	N/A, New Question	<p>In response to the OMB terms of clearance (“...will be revised to maintain relevance with emerging tobacco use behaviors and control policies”), we request to add the following question regarding harm perceptions of low nicotine cigarettes. FDA recently published an Advance Notice of Proposed Rulemaking (ANPRM) to obtain information for consideration in developing a potential product standard to lower nicotine in cigarettes to a minimally or non-addictive level. Little is known on youth harm perceptions of low nicotine cigarettes. Information on this would add to the information FDA received from comments on the ANPRM and would be useful from a regulatory perspective, should such a product standard be developed.
