**Attachment F – BSL3Ag Laboratories**

1.    Supplies, material and equipment enter and exit BSL3Ag areas only through an airlock, fumigation chamber, an interlocked and double-door autoclave, or shower.                      Yes     No   
       For materials which are temperature sensitive, a gas sterilizer, pass-through liquid dunk tank, or a cold gas decontamination chamber are provided.                      Yes     No
  
2.    Is a shower required when leaving the containment boundary                      Yes     No
  
3.    Disposable materials are decontaminated by a verified method (check all that apply):                      Yes     No   
        Autoclaved  
        Chemical (disinfectant, concentration, and time) \_\_\_\_\_  
        Incineration \_\_\_\_\_  
        Other \_\_\_\_\_
  
4.    All containment areas are designed, constructed and verified to function as a primary containment barrier. All walls are constructed slab-to-slab and walls, floors, and ceilings are sealed. All penetrations into the laboratory are sealed airtight to prevent escape of agents and to allow fumigation for biological decontamination.                      Yes     No
  
5.    Differential pressures/directional airflow are monitored and alarmed to indicate system failure.                      Yes     No
  
6.    There is HEPA filtration of all supply and exhaust air to and from the containment space. If yes, all HEPA filters are certified annually.                      Yes     No   
       Yes     No
  
7.    Laboratory procedure and design features include:
  - a.    Personnel ingress and egress only through a series of rooms which includes a ventilated vestibule.                      Yes     No
  - b.    A clean change room outside of containment.                      Yes     No
  - c.    Doors that define a containment boundary have compressible or inflatable gaskets with airtight hinges and latch/knob areas.                      Yes     No
  - d.    A shower room at the non-containment/containment boundary.                      Yes     No
  - e.    A dirty change room within containment.                      Yes     No
  
8.    A second shower is required at the facility access control point before donning street clothing.                      Yes     No

**Attachment F – BSL3Ag Laboratories (Continued)**

9. Humane restraining devices are provided in large animal rooms.                      Yes     No   
If yes, describe. Add additional sheets as needed.

10. Are necropsy rooms sized and equipped appropriately to accommodate animals?                      Yes     No   
If yes, describe. Add additional sheets as needed.

**Attachment G – BSL4/ABSL4 Laboratories**

**BSL4 LABORATORY**

1. Will work be performed in a BSL4/ABSL4 Cabinet Laboratory? Yes  No   
If yes, complete questions 2 - 8
2. Describe the type of personal protective equipment that will be used. Add additional sheets as needed.
3. Describe the decontamination methods for materials/equipment in the Class III cabinet. Add additional sheets as needed.
4. Describe what liquid effluents are decontaminated and how they are decontaminated. Add additional sheets as needed.
5. Describe the supply and exhaust components of the ventilation system, including how the ventilation system of the Class III cabinet is manifolded to the room ventilation. Add additional sheets as needed.
6. In the event of a ventilation failure, describe what measures are used to prevent reversal of airflow. Add additional sheets as needed.
7. Describe how differential pressures and directional airflow are monitored and analyzed. Add additional sheets as needed.
8. Describe how containment parameters are monitored daily. Add additional sheets as needed.
9. Will work be performed in a BSL4/ABSL4 Suit Laboratory? Yes  No   
If yes, complete questions 10 - 16
10. Describe the type of personal protective equipment that will be used. Add additional sheets as needed.
11. Describe what liquid effluents are decontaminated and what measures are used to do so. Add additional sheets as needed.

**Attachment G – BSL4/ABSL4 Laboratories (Continued)**

12. Describe the supply and exhaust components of the ventilation system, including how negative pressure is maintained and HEPA filtration of supply and exhaust air. Add additional sheets as needed.
  
13. In the event of a ventilation failure, describe what measures are used to prevent reversal of airflow. Add additional sheets as needed.
  
14. Describe how differential pressures and directional airflow are monitored and analyzed. Add additional sheets as needed.
  
15. In the event of a breathing air failure, describe what facility redundancies are in place. Add additional sheets as needed.
  
16. Describe how containment parameters are monitored daily. Add additional sheets as needed.
