Pilot Evaluation	Narrative	<ul> <li>1a. Survey data is of good quality (e.g. limited missing or invalid data).</li> <li>1b. Lab data is of good quality (e.g. limited missing or invalid data).</li> <li>1c. LPE exposure characteristics</li> </ul>	Means of verification 1a. Item response analysis 1b. Lab data (e.g. Positive controls are within acceptable standard deviation, negative controls are negative) 1c. Item response analysis	Assumptions	
Purpose of Pilot	1. To determine if study procedures allow team to answer research questions			<ul> <li>Utility and CDC team communicate throughout the pilot</li> <li>Utility follows study procedures</li> <li>CDC team follows study procedures</li> </ul>	
	2. To familiarize team members with study implementation and procedures	<ul> <li>2a. CDC team conducts 1-2 on- site training sessions.</li> <li>2b. All team members follow study standard operating procedures.</li> </ul>	2a. & 2b. Observed behavior and on-site training activities		
Low Pressure Event Outcomes	<ol> <li>CDC team and utility select appropriate exposed and unexposed areas.</li> </ol>	<ul> <li>1a. Exposed and unexposed areas are matched on census block or tract, housing type, pipe size and material, and origin of water.</li> <li>1b. CDC team receives customer contact information within 1- week of the event.</li> </ul>	<ul> <li>1a. Census maps and utility water systems information</li> <li>1b. Contact data management database used to monitor receipt of customer information from utilities and secure FTP site used for transfer of customer information</li> </ul>	<ul> <li>Team members follow study procedures</li> <li>No technical issues with data management databases</li> <li>No external issues that would prevent timely shipment of water samples</li> </ul>	
	2. LPE form is filled out completely at the time of repair.	2. Water sample information is available for all 6 samples, chain of custody information is complete, low pressure event information is complete.	2. LPE form (with chain of custody information on last page)		
	3. Water sample collection team follows standard operating procedures.	<ul> <li>3a. Utility personnel collect</li> <li>water samples from the exposed</li> <li>area within 24 hours of the LPE,</li> <li>using CDC protocols, and CDC</li> <li>receives samples within 30</li> <li>hours (EPA standard holding</li> <li>time for bacterial analytes).</li> <li>3b. Utility personnel collect</li> <li>water samples from the</li> <li>unexposed area within 48 hours</li> <li>of the LPE and CDC receives</li> </ul>	3a. & 3b. CDC lab chain of custody information received with shipments (on LPE form), lab data management database
