

The U.S. Census Bureau requests permission to increase the burden hours for the Generic Clearance for Internet Nonprobability Panel Pretesting (OMB number 0607-0978). The reason for an increase in burden hours is to correct the number of burden hours and respondents in ROCIS for this package. The number entered was not the inventory for the full cycle (as outlined in Supporting Statement A and the 30-day notice), but was incorrectly entered as the annualized version of the burden.

The Census Bureau is requesting an additional 38199 burden hours and 115325 respondents from December 2018 to September 2020. This would bring the totals to 50699 burden hours and 165325 respondents.

The Census Bureau will submit memos for each new test, including methods and all materials, as the details are finalized.
