8c	Briefly explain why security authorization is not required	
10	Describe in further detail any changes to the system that have occurred since the last PIA.	N/A, no prior PIA.
11	Describe the purpose of the system.	This survey-based information collection assesses the health characteristics, experiences, and needs of women living in the United States who were born in countries, or whose mothers were born in countries, where female genital mutilation/cutting (FGM/C) is prevalent.
12	Describe the type of information the system will collect, maintain (store), or share. (Subsequent questions will identify if this information is PII and ask about the specific data elements.)	The questionnaire will collect general demographic information (e.g., age, education, country of birth, time in the United States, employment history, marital status and family structure), migration, social support, health (overall health, health care utilization, health insurance, barriers to accessing health care, sexual history and contraceptive use, access to obstetric and gynecologic care, cervical cancer screening, influences on medical decision-making, pregnancy outcomes and prenatal care), and FGM/C (personal FGM/C history, related health problems, and beliefs).
13	Provide an overview of the system and describe the information it will collect, maintain (store), or share, either permanently or temporarily.	<p>The demographics, migration, social support, health, and FGM/C information collected for this study will be used to identify public health needs of women and communities in the United States that are affected by FGM/C, to formulate public health strategies to meet identified needs, and to inform prevention efforts so as to prevent continuation of the practice of FGM/C on women who may be at risk. information collected will provide some of the first systematic information on the reproductive health experiences and needs related to FGM/C among women who live in selected communities in the United States with high concentrations of residents from countries where FGM/C is prevalent.</p> <p>Interviewers will administer a paper or electronic version of the questionnaire in face-to-face interviews. Data will be collected and maintained by a contractor, and data sets will not be shared with other entities.</p> <p>Contractors will maintain any collected data temporarily; keeping it only until data are entered, quality reviewed for consistency and accuracy, and delivered to the Centers for Disease Control and Prevention.</p>
