

Exposure Measurement Study Consent, Assent, Permission Forms

OMB Attachment 3d

Agency for Toxic Substances and Disease Registry

Exposure Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill

CONSENT TO PARTICIPATE IN A RESEARCH STUDY

Overview

The Agency for Toxic Substances and Disease Registry (ATSDR) invites you, as an adult aged 18 or older (or the legal age in your state), to be in a research study about personal exposures either from synthetic turf fields or from natural grass fields. Your participation is voluntary. We invite you to read or hear about the study. Before you decide to take part, please ask questions if there is anything that you do not understand.

What is the purpose of this study?

The purpose is to see how people might be exposed to chemicals in crumb rubber infill in synthetic turf. Crumb rubber is the black material used as cushioning in synthetic turf fields. The crumb rubber is most often made from recycled tires. For comparison, we will also be recruiting some people who play on natural grass fields. We want to ask some questions about your activities on synthetic turf fields or natural grass fields. We will also collect urine samples from you. This information will help us see if people might be exposed to chemicals from playing on synthetic turf fields. We will use the results of this study to guide public health actions.

Why are you being asked to be in this study?

You were chosen to take part in this study because you work out on synthetic turf fields or on natural grass fields. We want to talk to people like you who take part in recreation, training, or organized sports on these fields.

ATSDR hopes to enroll at least 200 people to answer some questions and to provide urine samples so we can look what chemicals you are exposed to while playing on the field. In total, participants will spend about 50 minutes in this research study.

What are we asking you to do?

- We will ask you a few questions about yourself in an interview. We will ask questions about your activities on synthetic turf or natural grass fields. We want to know about the types of your activities, how often you play on the fields, and how long you have been playing on the fields.
- You will be asked to provide 50-100 ml (about ½ cup) of urine in a cup both before your practice and after your practice. You will do this in private in a restroom.
- We will not be collecting any personal information (e.g. names, address, etc.), and you will not receive a copy of your test results.

How long will this take?

It will take about 30 minutes to complete the interview. It will take about ten minutes to collect each of the urine samples.

Are there any risks or discomforts to you if you decide to be in this study?

We don't think these questions are sensitive. But the interview may be stressful if you have to recall events that are upsetting. You are free to skip any question for any reason. There are no medical risks from providing urine.

Are there any benefits to you from being in this study?

There will be no direct benefits to you from being in this study.

Who will see the information you give the researchers?

All information that you provide will be secure. We will track your information using a study ID number. We do not plan to link your study ID number with your identity. We will keep paper records in locked files. Electronic records will be stored on password protected computers at ATSDR. Only trained study staff will be allowed to look at your records. Federal policy requires making the data we collect available to the public.

What will happen to my urine samples?

Your urine samples will be shipped to and stored at the Centers for Disease Control and Prevention (CDC) laboratory in Atlanta, GA.

Your urine samples will be shipped to and stored at the Centers for Disease Control and Prevention (CDC) laboratory in Atlanta, GA. We will track your information using a study ID number. We do not plan to link your study ID number with your identity. We will keep paper records in locked files. Electronic records will be stored on password protected computers at ATSDR. Only trained study staff will be allowed to look at your records. Federal policy requires making the data we collect available to the public.

Your urine samples will be shipped to and stored at the Centers for Disease Control and Prevention (CDC) laboratory in Atlanta, GA. We will track your information using a study ID number. Only trained study staff will be allowed to look at your records. Federal policy requires making the data we collect available to the public.

What is the cost to you and what compensation will you get?

The only cost for being in our study is your time and effort to take part. We will give you a \$25 gift card as a “thank you” when you complete the interview. You can use the gift card at most stores or for online shopping.

People who also provide urine samples will get additional gift cards (\$10 pre-activity and \$15 post-activity).

What are your choices about participating?

Your participation in this study is voluntary. You are free to be a part of it or not. You can refuse to give a urine sample. You can choose to leave at any time prior to final sample collection even after you have agreed to participate in the study.

Who should you contact if you have questions later on?

If you have any questions about the study, please contact:

Kelsey Benson
Kbenson@cdc.gov
770-488-0684

For questions about your rights as a research subject, please contact:

Centers for Disease Control and Prevention (CDC)/ATSDR Human Research Protection Helpline
800-584-8814
Please leave a message and say you are calling about protocol 6881.

If you feel you have been harmed by this study please contact:

Dr. Elizabeth Irvin-Barnwell
Jcx0@cdc.gov
770-488-3684

What should you do after reading this information?

If you do not understand what we are asking you to do, please ask questions. After all your questions have been answered to your satisfaction and if you want to be in this study, please let the study interviewer know. As a way to protect your privacy, we will not ask you for your signature. You will be given a copy of this form for your records.

**PARENTAL/GUARDIAN PERMISSION FOR
ADOLESCENT PARTICIPATION IN A RESEARCH STUDY**

Exposure Characterization and Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill

Overview

The Agency for Toxic Substances and Disease Registry (ATSDR) invites you to give permission for your adolescent, aged 13 to 17 years (or up to the legal age in your state), to be in a research study about personal exposures either from synthetic turf fields or from natural grass fields. Your adolescent's participation is voluntary. We invite you both to read or hear about the study. Before you decide to allow your adolescent to take part, please ask questions if there is anything that you do not understand.

What is the purpose of this study?

The purpose is to see how people might be exposed to chemicals in crumb rubber infill in synthetic turf. Crumb rubber is the black material used as cushioning in synthetic turf fields. The crumb rubber is most often made from recycled tires. For comparison, we will also be recruiting some people who play on natural grass fields. We want to ask some questions about your adolescent's activities on synthetic turf fields or natural grass fields. We will also collect urine samples from your adolescent. This information will help us see if people might be exposed to chemicals from playing on synthetic turf fields. We will use the results of this study to guide public health actions.

Why is your adolescent being asked to be in this study?

Your adolescent was chosen to take part in this study because he/she works out on synthetic turf fields or natural grass fields. We want to talk to people like him/her who take part in recreation, training, or organized sports on these fields.

ATSDR hopes to enroll at least 200 people to answer some questions and to provide urine samples so we can look what chemicals your adolescent is exposed to while playing on the field. In total, participants will spend about 50 minutes in this research study.

What are we asking your adolescent to do?

- We will ask him/her a few questions in an interview. We will ask questions about his/her activities on the fields. We want to know about the types of his/her activities, how often he/she plays on the fields, and how long he/she has been playing on the fields.
- He/she will be asked to provide 50-100 ml (about ½ cup) of urine in a cup both before his/her practice and after his/her practice. He/she will do this in private in a restroom.
- We will not be collecting any personal information (e.g. names, address, etc.), and you will not receive a copy of your adolescent's test results.

How long will this take?

It will take about 30 minutes to complete the interview. It will take about ten minutes to collect each of the urine samples.

Are there any risks or discomforts to your adolescent if he/she decides to be in this study?

We don't think these questions are sensitive. But the interview may be stressful if he/she has to recall events that are upsetting. He/she is free to skip any question for any reason. There are no medical risks from providing urine.

Are there any benefits to your adolescent from being in this study?

There will be no direct benefits to him/her from being in this study.

Who will see the information your adolescent gives the researchers?

All information about your adolescent provides will be secure. We will track his/her information using a study ID number. We do not plan to link your adolescent's study ID number with his/her identity. We will keep paper records in locked files. Electronic records will be stored on password protected computers at ATSDR. What should you do after reading this information?

If you or your adolescent do not understand what we are asking him/her to do, please ask questions. After all your questions have been answered to your satisfaction and if you permit your adolescent to be in this study, please let the study interviewer know. As a way to protect your privacy, we will not ask you or your adolescent for signatures. You will be given a copy of these forms for your records.

Agency for Toxic Substances and Disease Registry

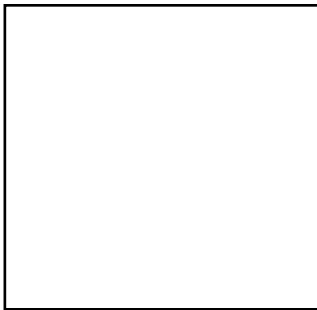

Exposure Characterization and Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill

PARENTAL/GUARDIAN PERMISSION FOR ADOLESCENT PARTICIPATION IN A RESEARCH STUDY

I have read the above information, or it has been read to me, about the study titled *Exposure Characterization and Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill*. I have been allowed to ask questions and I had all my questions answered.

I permit my adolescent to take part in the research and the interview.

I permit my adolescent to provide urine samples. I give ATSDR permission to store my adolescent's urine to do the tests later. I understand that ATSDR will not send my adolescent's test results to me.

Participant Label

Agency for Toxic Substances and Disease Registry

Exposure Characterization and Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill

ADOLESCENT ASSENT TO BE IN A RESEARCH STUDY

We are doing a study to learn about how people use playing fields with crumb rubber and to see how people might be exposed to chemicals in crumb rubber infill in synthetic turf. Crumb rubber is the black stuff that makes the fields soft to play on. It is usually made from recycled tires. We also want to learn if people are exposed to chemicals from the crumb rubber. We are asking adolescents, 13 to 17 years of age, to participate in this study. For comparison, we will also be recruiting some people who play on natural grass fields. You were selected to take part in this study because you play on synthetic turf with crumb rubber or on natural grass fields.

If you agree to be in our study, we are going to ask you some questions about how you play or practice on the fields. For example, we want to know how often you fall or slide on the ground.

You can ask questions about this study at any time. It should take about 30 minutes to finish the interview. If you decide at any time not to finish, you can ask us to stop.

The questions we will ask are about how you play or practice on the fields. There are not right or wrong answers because this is not a test.

We will collect two urine samples, one before you begin your activity on the field and one after you finish your activity on the field. We will ask you to collect your urine in a cup we will give you. It should take you 10 minutes for each sample to do this.

Other Information

There are no risks from giving urine.

Your mom/dad has said it is ok for you to be in the study but it is up to you if you want to take part. You can decide whether or not to take part in this study. You can ask questions about this study at any time. If you decide at any time not to finish, you can ask us to stop.

If You Have Questions

If you have any questions now, please ask us. If you have questions later, your parents/guardians have information about who to call.

I agree to take part in the research, including the interview and providing urine samples.

Agency for Toxic Substances and Disease Registry

Exposure Characterization and Measurements during Activities Conducted on Synthetic Turf Fields with Tire Crumb Rubber Infill

PARENTAL/GUARDIAN PERMISSION FOR YOUTH PARTICIPATION IN A RESEARCH STUDY

Overview

The Agency for Toxic Substances and Disease Registry (ATSDR) invites you to give permission for your youth, aged 10 to 12 years, to be in a research study about personal exposure either from synthetic turf fields or from natural grass fields. Your youth's participation is voluntary. We invite you both to read or hear about the study. Before you decide to allow your youth to take part, please ask questions if there is anything that you do not understand.

What is the purpose of this study?

The purpose is to see how people might be exposed to chemicals in crumb rubber infill in synthetic turf. Crumb rubber is the black material used as cushioning in synthetic turf fields.
