Implementation Plan Elements

ELEMENT 1 Best Management Practices (BMPs)

The following BMPs have been identified as significant opportunities to cost effectively reduce methane emissions from the gathering and processing sector. They were selected based on their applicability to the industry, economic feasibility, and cost-effectiveness. There are three core BMPs for the gathering and processing sector:

- BMP 1 Convert gas pneumatics to instrument air systems
- BMP 2 Install flash tank separators on glycol dehydrators
- BMP 3 Directed inspection and maintenance (DI&M) at gas plants and booster stations

For detailed information on these BMPs, please refer to the *Lessons Learned* publications on the Natural Gas STAR website: *https://www.epa.gov/natural-gas-star-program/recommended-technologies-reduce-methane-emissions*.

ELEMENT 2 Additional Activities

Current partners have reported many processes and technologies that are considered additional Best Management Practices by the program. New partners are encouraged to evaluate and report current and new practices or technologies that cost effectively reduce methane emissions.

ELEMENT 3 Inventory Past Reductions

Partners are encouraged to report past methane emission reductions back to 1990. Accounting for these historical reductions will create a permanent record of your company's methane emission reduction efforts. In addition, reviewing past activities will help guide companies' participation in Natural Gas STAR by creating a base of understanding of current activities to facilitate planning of future activities.

The Implementation Plan is designed to be a dynamic tool for Natural Gas STAR Partners to plan their program activities. As company priorities and plans shift over time, the Implementation Plan may be revised or updated by submitting a new form to the program. The Partner should only share non-Confidential Business Information (CBI) to fulfill Gas STAR Program requirements.

ELEMENT 1 Best Management Practices

BMP 1 Convert Gas Pneumatics to Instrument Air Systems			
Pneumatic devices that use the pipeline gas pressure to transmit signals and drive process control valves collectively emit large amounts of methane into the atmosphere. Replacing these with instrument air systems eliminates emissions and improves safety.	Estimated Reduction Potential 15.8 Bcf		
Will you be implementing this BMP? Yes No If no, why? Not cost effective May consider at a later date Have already implemented Other Please describe:			
If yes, at what scale will you be implementing this BMP? Company Wide Pilot Project Other Please describe:			
Activity Summary			
Number of facilities currently equipped with instrument air systems?			
Replacement Schedule			
Number of planned instrument air projects:			
Year 1: Year 2: Year 3: Year 4:			
Additional Information on Anticipated Plans and Projects			
If additional space is needed, please continue on the back.			

BMP 2 Install Flash Tank Separators on Glycol Dehydrators		
Flash tank separators installed in glycol dehydration systems capture the methane entrained in the circulating glycol for use on site.	Estimated Reduction Potential 1.70 Bcf	
Will you be implementing this BMP? If no, why? Not cost effective May consider at a later date Have already implemented Other Please describe:		
If yes, at what scale will you be implementing this BMP? Company Wide Pilot Project Other Please describe:		
Activity Summary		
Number of glycol dehydrators currently equipped with flash tank separators? Number of glycol dehydrators suitable for flash tank installation?		
Replacement Schedule		
Number of flash tank separators to be installed by the end of: Year 1: Year 2: Year 3: Year 4:		
Additional Information on Anticipated Plans and Projects		

If additional space is needed, please continue on the back.

BMP 3 Directed Inspection and Maintenance at Gas Plants and Booster Stations				
A DI&M program is a system for performing routine leak detection and repair where leak measurement data from previous inspections are used to guide subsequent inspections and to direct maintenance to those leaks that are cost effective to repair.	Estimated Reduction Potential 26.9 Bcf			
Will you be implementing this BMP? Yes No If no, why? Not cost effective May consider at a later date Have already implemented Other Please describe:				
If yes, at what scale will you be implementing this BMP? Company Wide Pilot Project Other Please describe:				
Activity Summary				
Please fill out the table below to show the total number of gas plants and booster stations selected for BMP 3.				
	tations selected for BMP 3.			
Total number of facilities Numb	ations selected for BMP 3. er selected for BMP 3			
Total number of facilities Number Number of Gas Plants				
Total number of facilities Number Number of Gas Plants	er selected for BMP 3

ELEMENT 2 Additional Activities

Additional Activities

Your company may take advantage of additional technologies or practices to reduce methane emissions. The following is a list of some of the additional activities that have been reported by other Natural Gas STAR partners, which may be applicable to your operations (for more information on these activities, please view: *https://www.epa.gov/natural-gas-star-program/recommended-technologies-reduce-methane-emissions*):

- ☆ DI&M: aerial leak detection using laser and/or infrared technology
- \doteqdot Eliminate unnecessary equipment and/or systems
- $rac{l}{l}$ Install electric compressors
- ☆ Redesign blowdown systems/alter ESD practices

Additional activities you will be implementing	Please describe

ELEMENT 3 Inventory Past Reductions

An inventory of past reductions will help to create a permanent record of your past efforts.

As a first step, many new partners find it useful to inventory and document past methane emission reduction efforts. The inventory process helps companies quantify the success of their past activities and target future emission reduction efforts. Historical methane emission reductions identified as part of the inventory process can be reported to the Natural Gas STAR Program.

Will you inventory past activities to include in your annual report?

If yes, please describe your company's plans for reviewing past methane emission reduction activities.

The Natural Gas STAR Program thanks you for your time.

Please send completed forms to:

<u>Regular Mail</u> Natural Gas STAR Program U.S. EPA (6207J) 1200 Pennsylvania Avenue, NW Washington, DC 20460 Express/Overnight Mail Natural Gas STAR Program 1201 Constitution Ave NW Room Number 4353PP Washington, DC 20004

Questions? Please call Jerome Blackman at (202) 343-9630, or send an email to GasSTAR@epa.gov.

The public reporting and recordkeeping burden for this collection of information is estimated to average 25 hours for each new response and 12 hours for subsequent responses. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, Collection Strategies Division, U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.
