U.S. Small Business Administration

Supporting Statement for Evaluation of the Regional Innovation Cluster (RIC) Initiative

PART A. Justification

1. Circumstances Making the Collection of Information Necessary Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

The U.S. Small Business Administration's (SBA) statutory mission is to "aid, counsel, assist and protect, insofar as is possible, the interests of small business concerns." The Agency's Office of Entrepreneurial Development (OED) helps to carry out this mission by providing training and counseling programs and initiatives, such as the Regional Innovation Clusters (RIC) initiative, to existing and prospective small businesses.

Through the RIC initiative, SBA is investing in regional clusters—geographic concentrations of interconnected companies, specialized suppliers, academic institutions, service providers, and associated organizations with a specific industry focus—throughout the United States that span a variety of industries, ranging from energy and manufacturing to advanced defense technologies. The three primary goals of the initiative are to (1) increase opportunities for small business participation within clusters, (2) promote innovation in the industries on which the clusters are focused, and (3) enhance economic development and growth in cluster regions. This information collection is necessary for SBA to understand the progress of the RIC initiative toward achieving those goals.

2. Purpose and Use of the Information Collected Indicate how, by whom, how frequently, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

In December 2016, SBA published *The Evaluation of the U.S. Small Business Administration's Regional Innovation Cluster Initiative, Year 5 Report.* Prepared by contractors, the evaluation consisted of two key components: an implementation evaluation and an outcome evaluation. The implementation evaluation focused on how the Initiative was implemented across the 11 clusters active in Year 5 and on the services that each cluster provided to its small businesses. The outcome evaluation focused on short- and intermediate-term outcomes linked directly to the cluster services provided, as well as on longer-term economic outcomes that can be reasonably expected to result from the short- and intermediate-term outcomes achieved. Data in the report suggest the RIC has supported important and widespread growth in both revenue and employment. Over the years, study data and revised surveys have helped to streamline the report. Furthermore, data from the survey also helped SBA to focus on rural and agricultural small

businesses for the latest group of seven RICs. More detailed analysis is available in the full report cited above.

SBA plans to continue collecting satisfaction and business economic data from program participants annually. Changes in key measures, such as revenue and employment growth, will be benchmarked against the average change in similar firms in the same regions. In addition, the participants' satisfaction with the program and its effects on their short-term goals (and the goals of the Initiative) will be tracked from year to year. SBA will hire an independent contractor, to plan and conduct this performance evaluation of the RIC Initiative.

The RIC Initiative capitalizes on the theory of regional cluster development by supporting "actively managed" clusters (i.e. clusters that are administered by a team of individuals and possess a form of governance rather than a cluster that occurs naturally without intervention in a regional economy). The teams provide a host of services to the target population of small and emerging businesses within their regional and industry focuses. Services include direct business advising and support and sponsoring events, such as networking opportunities with investors, large businesses and other stakeholders in the regions.

The intended short- and intermediate-term outcomes are directly linked to cluster services, activities, and events, and are expected to be observed during or soon after participation in the RIC. Long-term outcomes, such as increased revenue and total payroll are expected to be observed in subsequent time periods.

Figure 1 illustrates the short-, intermediate-, and long-term outcomes that will be evaluated in this study, showing the linkages between cluster services and these outcomes as well as the metrics used to assess them.

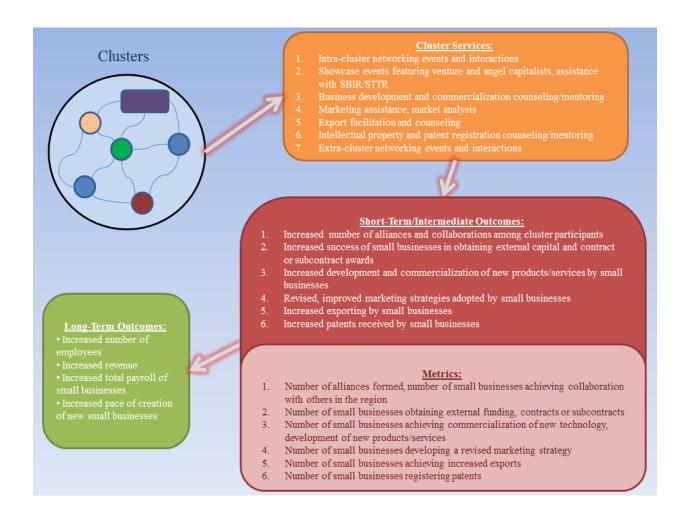

Figure 1. RIC Logic Model

The data collection effort discussed in this request involves the collection of a variety of data from three classes of RIC initiative stakeholders. Small businesses participating in the cluster represent a first group of initiative stakeholders. They will be sent an online survey (or a PDF smart form, depending on their preference) to provide data about their participation and satisfaction, the performance of their firm with regard to a variety of key performance indicators that are expected to manifest themselves due to cluster participation, and the role of cluster participation in the evolution of these key performance indicators.

Large organizations, a broad group that includes universities and national laboratories, public sector agencies, nonprofit organizations, and business associations, represent the second group of initiative stakeholders. They will be asked to answer an online survey (or a PDF smart form, depending on their preference) to provide data about the reason(s) for their participation, their collaboration or involvement with small businesses, and the role of cluster participation on key indicators associated with their operations.

Finally, the administrators of the clusters involved in the RIC initiative will be asked to complete a survey that provides the frame from which small business and large organization surveys are

sent, as well as information about the services they provided these two groups of stakeholders, and about their operations in general. In addition, cluster administrators will be interviewed twice a year, once to clarify and follow up on the content of their first through third quarter progress reports, and once to follow up on their fourth quarter progress report, to obtain information about how their operations have evolved, and the adjustments they made and the lessons learned during the year.

The proposed evaluation will be used to increase SBA's understanding of outcome trends of small business across its RIC portfolio, identify potential areas of exception, and contribute to the body of knowledge surrounding how RICs help small businesses. This data will not be used to evaluate the effectiveness of an individual cluster.

The survey results do not allow for causal claims regarding the relationship between the outcome estimates and the services provided through the Initiative. The surveys capture outputs and outcomes of the small businesses participating in each cluster. At least three categories of users exist for the information collected and it is used in the following ways:

- SBA uses the evaluation findings on a regular basis to monitor program trends across its portfolio and assess participants' satisfaction with the services. Evaluation findings are also used by SBA during interactions with its stakeholders, including Congress. SBA has used the outcome data to assist in defining the markets to focus the cluster initiative for newest 7 clusters. The clusters awarded in 2019 are focused on agricultural and rural markets. The evaluation findings will allow SBA to continue to monitor trends across the portfolio of the 14 clusters.
- Cluster administrators (who are provided clean, de-identified data for their cluster upon request) use this information to refine their strategy and improve the service mix they provide to participants. They may also use these data during discussions with potential partners, in an effort to obtain other sources of funding outside of SBA.
- Researchers in the field of economic development and cluster practitioners use the findings from this evaluation (which are shared with the public) to implement or refine a cluster strategy in their region, improve how they measure their own initiative or project, or develop improved methods to measure cluster performance.

SBA and some of the cluster administrators use these data several times a year, whereas it is more difficult to assess the frequency of use of these data by researchers and practitioners who operate and evaluate clusters.

3. Use of Information Technology and Burden Reduction

Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden. Insert any applicable electronic web address.

Survey data will be collected via web-based surveys and electronic templates, which facilitate the efficient collection and analysis of data. Web-based surveys reduce the burden placed on respondents, because the survey platform automates the skip pattern to ensure respondents do not need to read through instructions to bypass questions that are not relevant to them. The web-

based survey requires no more than hitting a submit button to transfer the information. The platform selected will also allow respondents to stop at any time and resume the survey at the point at which they last stopped. The electronic templates are created in MS Excel and are programmed to operate with similar burden reduction methods as web-based surveys. For example, drop-down menus are used so that respondents do not have to type in the information, and skip patterns are implemented by "graying out" columns that are not applicable based on the responses to previous questions. In all surveys, a glossary of terms is provided, and in the case of the web-based survey, the glossary is hyperlinked to the instances of the term in the survey for quick reference. A glossary reduces confusion among respondents, thereby lessening their burden, and improves the consistency of the data collected by ensuring that respondents use the same definition.

4. Efforts to Identify Duplication and Use of Similar Information Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

The surveys and cluster administrator interviews discussed in this packet were devised to fill gaps identified in the clusters' progress reports. SBA does not currently require the systematic collection of baseline or follow-up information about RIC participants from the clusters. They are only required to provide quarterly reports where they are asked about their aggregated progress on a few key metrics. Therefore, there is no duplication in the data collected via the surveys and cluster administrator interviews.

There is only one area where duplication exists; the small businesses and the clusters in which they participate are both asked to report on access to external financing (e.g., venture or angel capital, SBA and non-SBA loans, grants). The underlying reasons for this are discussed in more detail in under question #5, below, as they relate to diminishing the burden on small businesses.

The economic data items to be collected via the survey, although potentially collected by a federal agency, are not currently available in any public administrative data that could be linked to RIC participant data.

5. Impacts on Small Businesses or Other Small Entities If the collection of information impacts small business or other small entities, describe any methods used to minimize burden.

To minimize the burden on respondents, which will include small businesses and small entities, efforts have been made to simplify and streamline the survey. The estimated annual burden on small businesses or small entities is only 255 hours (of the 405 total burden hours of the collection) per year, largely due to the small number of service satisfaction questions and business information that does not require the respondent to retrieve data from a secondary source, such as a tax return. The survey will be disseminated via an online platform, which will allow small business owners to take the survey at a time that is convenient for them and only answer questions that pertain to their experiences. For example, skip patterns are programmed into the platform so that businesses that reported no new access to external financing via a simple

"yes" or "no" question are not presented with follow-up questions about the sources and total value of financing or the role played by the cluster in facilitating access to these sources. In the event that the small business is not comfortable sharing information in a web-based tool, they will be provided with a PDF smart form version of the survey that can be filled out by hand or electronically, as they prefer.¹

As mentioned in question #4 above, there is one instance where the same information is collected from two different groups of respondents: Both the small business survey and cluster administrator survey request information about access to external financing by small businesses participating in the clusters. This duplication is intentional, as it will enable the verification of information between these two groups of respondents. It is hoped that it will be temporary if SBA finds consistency amongst respondents; however, that has not been determined.

Cluster administrators interact with many of their participating small business on a near daily basis, and are expected to collect information about the progress of their participants as part of their contracts with SBA. Many also collect and use this information to better assist their participants and identify resources that are best suited to support their growth. They are therefore well positioned to obtain and report on this performance area. However, they do not necessarily collect this information systematically, nor do they interact with all their participating small businesses on a regular basis. As a result, they may not provide data that is as complete and accurate as that provided by small businesses. The goal is to better understand which group of respondents can most reliably provide this information. Information provided by these two groups will be cross-referenced and assessed for coverage based on each respondent group's overall response rate and item nonresponse rates. Findings from this process will be used to identify which respondent group should be targeted to best obtain information in subsequent years, and any overlapping questions will be culled from one of the survey instruments. As part of this decision process, limiting the burden on small businesses will be considered such that, if the two sources of information are relatively similar, the cluster administrators will be targeted as a priority.

6. Consequences of Collecting the Information Less Frequently Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

The consequences of forgoing this data collection annually are twofold. First, without this data collection, SBA would not have systematic information on RIC participants' post service responses to monitor trends and determine whether the program is meeting its goals and effecting change in the growth of target businesses or whether particular sites are in need of extra oversight and support from program managers at SBA. Information about participants' satisfaction and level of involvement is also important to guide programmatic changes to the initiative by SBA, and adjustments by cluster administrators to the services they provide. Furthermore, the information collected is needed to produce OED's annual report discussing its various initiatives.

8

¹ The PDF smart form is a PDF version of the web survey that can be filled out by respondents using PDF reader software (such as Adobe Acrobat Reader). The content entered is then saved and can be extracted to generate structured data. In addition, the PDF smart form can also be printed and filled out by hand. However, it must then be scanned and sent back by the respondent to submit the information.

- 7. Special Circumstances Relating to the Guideline of 5 CFR 1320.5 Explain any special circumstances that would cause an information collection to be conducted in a manner:
 - requiring respondents to report information to the agency more often than quarterly;
 - requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
 - requiring respondents to submit more than an original and two copies of any document;
 - requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than 3 years in connection with a statistical survey that is not designed to produce valid and reliable results that can be generalized to the universe of study;
 - requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
 - that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or that unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
 - requiring respondents to submit proprietary, trade secret, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

SBA requests that the data-submission period be fewer than 30 days (approximately 20 days). The shorter time frame, coupled with frequent notifications from multiple sources, would allow for the survey request to remain more prominent in clients' minds. Shortening the response time could help increase the response rate by reducing the likelihood that a client would choose to procrastinate. No other special circumstances would cause information to be collected in the manners described above.

8. Comments in Response to the Federal Register Notice and Efforts to Consult Outside the Agency

If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice, and describe actions taken by the agency in response to these comments. Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting form, and on the data elements to be recorded, disclosed, or reported.

The required public comment notice was published in the Federal Register (see Appendix A-3). All comments were due on or before January 22, 2019. No comments on this collection were received.

9. Explanation of Any Payment or Gift to the Respondents Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

No payments or gifts will be made to respondents.

10. Assurance of Confidentiality Provided to Respondents Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

In the study reports produced for the public, participant data will be reported in the aggregate, and information obtained from the interviews will be attributed to participants without any identifying information. Any personal information collected will be protected to the extent permitted by law, including the Privacy Act of 1974 and the Freedom of Information Act (FOIA). In addition, to the extent permitted under FOIA, in particular exemption 4, confidential business information will only be disclosed to contractor or Agency personnel assigned to administer the Initiative services and surveys.

An independent contractor, will be collecting, compiling, and analyzing all data collected from RIC participants and RIC initiative administrators. Data collected by the contractor will be stored and analyzed on secure servers. Secure intranets will be used to maintain project-related files, and secure servers employ industry-standard methods, such as firewalls, monitored-access logs, virus protection, encrypted connections, password-protected accounts, and user-authentication mechanisms, to ensure the privacy of personal data. The security approaches are further described in Appendix A-2.

11. Justification for Sensitive Questions

Provide additional justification for any questions of a sensitive nature, such as sexual behavior or attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information is requested, and any steps to be taken to obtain their consent.

Cluster small businesses will be asked about their businesses' financial situations, including revenue and external financing obtained. These measures are essential to the mission of the RIC Initiative and for SBA to monitor business performance. As described in Part B, the information will be used to report on growth of participants, relative to a benchmark set of firms and relative to subsequent years of the initiative. Participants will also be asked for two unique business identification numbers, their DUNS and EIN numbers.

These data are necessary to improve data validity and reduce survey burden in future years of the study or in follow-up analysis on current participants. The DUNS will allow SBA to link RIC participants to the data it houses on loans and contracts. The data elements will only be used for research/statistical purposes and never to determine additional data on an individual. The potentially sensitive nature of these identifiers means the data will be transferred and maintained according to a data security protocol (see Appendix A-2).

12. Estimates of Hour Burden, Including Annualized Hourly Costs Provide estimates of the hour burden of the collection of information. Indicate the affected public, number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated.

SBA estimates that 405 hours are needed to conduct this study over the course of a year. The total annualized hour and costs burdens are detailed in the exhibit below.

The affected respondent types for this data collection include RIC administrators (i.e., the contract awardees), small business participants, and cluster stakeholders (i.e., large organization participants, such as universities and corporations). Preliminary pretests were conducted for all data-collection instruments to derive the burden estimates. Subsequent testing has not been conducted as only minor revisions have been made to the survey.

The cost burden for small businesses is based on an estimated median annual income of \$60,617 for small business owners, which equates to an hourly rate of \$25.78. See http://www.payscale.com/research/US/Job=Small Business Owner %2F Operator/Salary. The cost burden for large organization stakeholders, \$44 per hour, is based on a weighted average of the estimated mean hourly wages for management and non-management positions for universities, nonprofits, government agencies, large businesses, and business associations (these types of organizations are expected to compose the majority of cluster large organization stakeholders). See for example http://www.bls.gov/oes/current/naics4 813400.htm.

Exhibit A1. Study burden estimate

Burden	Number of organizations	Frequency of collection	Average minutes spent per instance	Organization burden (in hours)	Organization burden (in dollars)					
Small Businesses										
Initial contact	821	1	3	41	\$1,058.27					
1st reminder	739	1	2	25	\$635.05					
2nd reminder	666	1	2	22	\$572.32					
3rd reminder	600	1	2	20	\$515.60					
4th reminder	540	1	2	18	\$464.04					
Small business survey	387	1	20	129	\$3,325.62					
Total small business burden				255	\$6,570.89					
Large Organizations										
Initial contact	386	1	3	19	\$849.20					
1st reminder	348	1	2	12	\$510.40					
2nd reminder	314	1	2	10	\$460.53					
3rd reminder	283	1	2	9	\$415.07					
4th reminder	269	1	2	9	\$394.53					
Large organization survey	152	1	10	25	\$1,114.67					
Total large organization burden				85	\$3,744.40					
Cluster Administrators										
Contact and scheduling for interviews	14	2	10	2	*					
Interviews (1 mid-term, 1 annual)	14	2	150	35	*					
Cluster administrator survey	14	1	120	28	*					
Total large organization burden				65	*					
Total overall burden				405	\$10,315.29					

^{*} There are no additional costs associated with the administrators, as they are performing these functions under an existing contract.

13. Estimates of Other Total Annual Cost Burden to Respondents or Record Keepers Provide estimates of the total annual cost burden to respondents or record keepers resulting from the collection of information.

There is no other annual cost burden to respondents or record keepers.

14. Annualized Costs to Federal Government

Provide estimates of annualized cost to the federal government. Provide a description of the method used to estimate cost and any other expense that would not have been incurred without this collection of information.

The annualized cost to the federal government is \$276,661(see Exhibit A2, below). This includes the costs associated with the contractor conducting the project and the salaries of the assigned SBA employees.

Exhibit A2. Estimated annualized cost to the federal government

Estimates	SBA COR	SBA program manager	Evaluation contractor	Total federal costs
Number of employees	1	1	NA	NA
Hours anticipated	80	80	NA	NA
Average hourly pay	\$47.51	\$56.15	NA	NA
Total cost	\$3,801	\$4,492	\$268,368	\$276,661

The cost of the Office of Entrepreneurial Development (OED) employee involved in administration of the survey and study (the SBA Contracting Officer's Representative [COR]) is estimated at GS-13, Step 1, at \$47.51 per hour based on 2,080 hours per year. OED anticipates that this person will work 80 hours per year for 1 year on this initiative. The annual cost for this OED employee over the course of this study is \$3,801. The cost of the OED employee involved in study oversight (the SBA program manager) is estimated at GS-14, Step 1, at \$56.15 per hour based on 2,080 hours per year. OED anticipates that this person will work 80 hours per year for 1 year. The annual cost for this OED employee over the course of this study is \$4,492, although this would not be costs added. The annual cost for both of these OED employees over the course of this study is \$8,293. Federal employee pay rates are based on the 2019 General Schedule pay scale for the Washington, D.C., locality.²

² The general schedule is found at https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2019/salhrl.pdf.

15. Explanation for Program Changes or Adjustments
Explain the reasons for any program changes or adjustments reported in items 13 or 14 of
OMB form 83-I.

The number of participants and respondents has increased to 1,537.

16. Plans for Tabulation and Publication and Project Time Schedule For collections of information whose results are planned to be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

This study will use quantitative (i.e., descriptive and inferential statistical techniques) and qualitative methods for analyzing the data. The analysis is expected to include tables for the statistics and potentially graphs. The full report will include the appropriate associated statistics, such as the p-value for statistical significance at the 10 percent, 5 percent, and 1 percent levels. Other data gathered from the surveys will be presented in tables using descriptive statistics. Qualitative analysis will involve determining challenges, lessons, and the factors to which participants attribute their success. This information may be showcased in text boxes or integrated into the text. A final public report will be released approximately 6 months after the data collection is complete. A standardized schedule for the project is attached in Appendix A-1.

17. Reason(s) Display of OMB Expiration Date Is Inappropriate
If seeking approval to not display the expiration date for OMB approval of the information
collection, explain the reasons that display would be inappropriate.

SBA plans to display the OMB expiration date.

18. Exceptions to Certification for Paperwork Reduction Act Submissions Explain each exception to the certification statement identified in item 19, "Certification Requirement for Paperwork Reduction Act" of OMB Form 83-I. If Agency is not requesting an exception, the standard statement should be used.

SBA is not requesting any exceptions to the certification.
