CDC's National Center for Environmental Health Objectives

Environmental Factors Contributing to Foodborne Outbreaks

Environmental Factors Contributing to Outbreaks

Contributing Factors

Contamination

- Cross-contamination of ingredients
- Contact by an infectious/ill worker

Proliferation

- Improper cold holding due to malfunctioning equipment
- Improper cold holding due to improper procedure

Survival

- Insufficient time/temp during reheating
- Insufficient time/temp during freezing

Environmental Antecedents

- People
- Processes
- Equipment
- Economics
- Food

Environmental Factors Contributing to Outbreaks

Outbreak Environmental Assessments

Describe how the environment contributes to the introduction and transmission of illness agents

Are conducted by environmental health program staff

Involve a thorough review of the processes and practices used with suspected food items

Are guided by known information about the outbreak (e.g., agent)

May include food flows, staff interviews, observations of food preparation, sampling

Generate recommendations for intervention

The Need to Improve Reporting of Environmental Assessment Data

- **Environmental assessment data are key to:**
 - Understand how and why outbreaks occur
 - Develop appropriate guidelines, policies and practices
 - Prevent future outbreaks
- **Engage food safety officials responsible for conducting environmental assessments**
- **Limited environmental assessment data reported at a national level**

Environmental Assessment Training

The screenshot displays a training interface for environmental assessment. On the left, a chef in a white uniform and black cap stands in a kitchen. The interface includes a 'Question Category' list, a progress indicator for 'Average question effectiveness' (100%), a 'Score' gauge (4%), and a 'TIME REMAINING' of 9:20. A 'END INTERVIEW' button is at the bottom left. The main question asks, 'Thinking back about 5 days ago, what tasks did you perform?'. On the right, a refrigerator is shown with a digital temperature display at 58°F. A task list for 'Left Beef Stew' is overlaid on the refrigerator image, including 'Take temperature', 'Get depth of stew', and 'Get additional info'. The refrigerator shelves contain various items like a watermelon, rice pilaf containers, and cartons of orange juice.

Question Category

1. Tasks Performed by this FW
2. Establishment Policies
3. Food Safety Training
4. Personal Health
5. Personal Handwashing/Hygiene
6. Personal Use of Gloves

Thinking back about 5 days ago, what tasks did you perform?

Average question effectiveness
100%

Score
4%
5 / 125 points

TIME REMAINING
9:20

END INTERVIEW

Left Beef Stew

- Take temperature
- Get depth of stew
- Get additional info

58°F

OK

Support of Environmental Assessments at the State and Local level

Development and launch of environmental assessment training

- Designed to improve environmental health programs' competency in conducting environmental assessments during outbreaks
- Over 6,000 people from federal, state, local government agencies have registered for the training
- Free, web-based, interactive, self-paced
- CEUs are available
- Participants are showing a 25 percentage point increase in pre to post test scores

Environmental Assessment Training

- **Module 1: Foundation Skills**

- Lesson 1: Your Assignment
- Lesson 2: Overview of Foodborne Illness Outbreak Environmental Assessments
- Lesson 3: Effective Interviewing Skills
- Lesson 4: Observation and Records Review
- Lesson 5: Environmental Sampling
- Lesson 6: Critical Thinking Skills
- Lesson 7: Organizing Assessment Information
- Lesson 8: Control Strategies and Conducting Actions

Environmental Assessment Training

■ **Module 2: Skill Building**

- Lesson 1: Guided walkthrough of an environmental assessment for a fictitious *C. perfringens* outbreak linked to a private school cafeteria
- Lesson 2: Virtual environmental assessment of a fictitious *Salmonella* Enteritidis and *Salmonella* Pomona outbreak linked to a local catering establishment
- Lesson 3: Guided walkthrough of an environmental assessment for a fictitious *E. coli* O157:H7 outbreak linked to a grower and distributor of organic herbs
- Lesson 4: Virtual environmental assessment of a fictitious *Listeria* outbreak in a cheese plant

■ **Module 3: Food Defense**

- Lesson 1: Overview of food defense concepts
- Lesson 2: Overview of food defense planning

Collection and Analysis of Environmental Assessment Data at the National Level

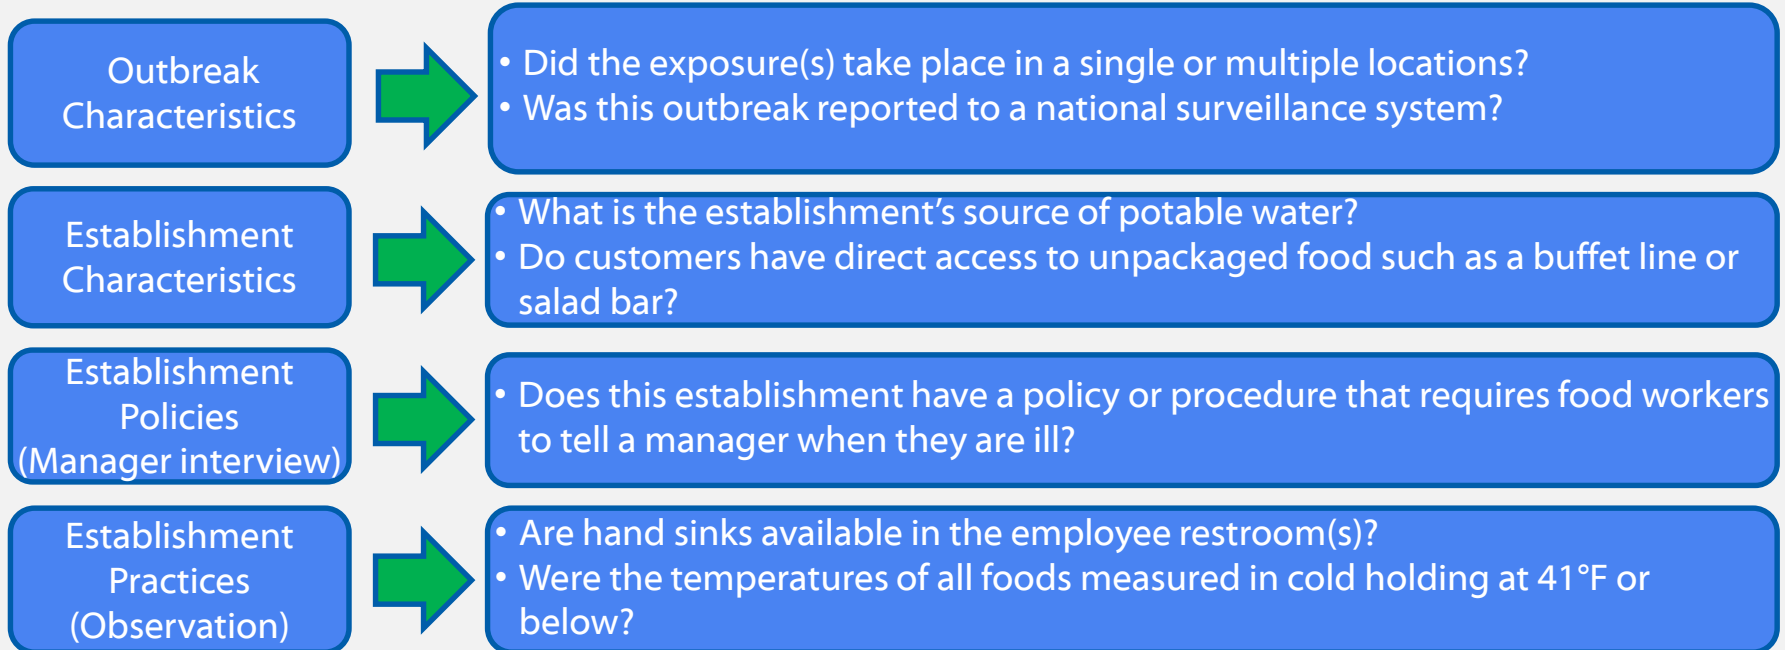

Development and launch of National Environmental Assessment Reporting System (NEARS)

- Companion surveillance system to the National Outbreak Reporting System (NORS)
- Repository for state and local programs to report data collected from their environmental assessments
- 31 state and local agencies are currently registered to begin reporting data into NEARS

Collection and Analysis of Environmental Assessment Data at the National Level

Programs report data into NEARS on:

Collection and Analysis of Environmental Assessment Data at the National Level

Programs report data into NEARS on:

Suspected/
Confirmed food

- Was a specific ingredient or multi-ingredient food suspected or confirmed in this outbreak?
- Is the ingredient an animal product, and if so, what kind?

Environmental
Sampling

- Were any samples taken?
- If environmental, where was the sample taken?

Contributing
Factors

- Were any contributing factors identified?
- What activities were used to try to identify contributing factors?

Short-term Benefits of NEARS Participation

**Annual report from
CDC summarizing
your NEARS data**

***Complements
FDA Standard 5
Requirements**

**Collaboration/
communication with
other states/localities
participating in
NEARS**

**Potential scientific
publication
opportunities**

**Ability to document
and track foodborne
outbreak response
data**

CDC's National Environmental Assessment Reporting System (NEARS)

2015 Summary Report

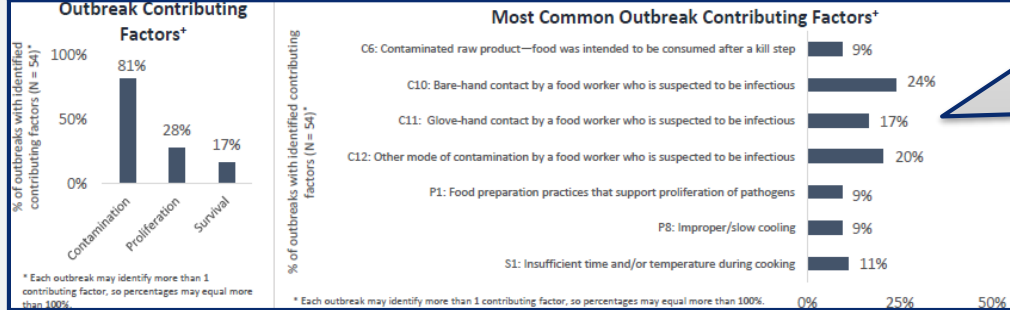

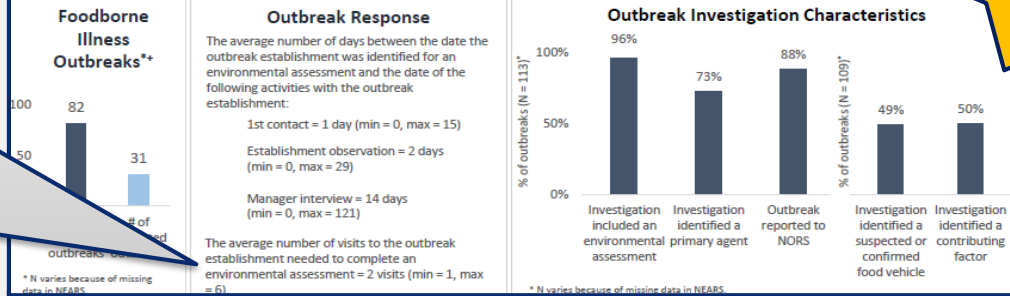

In 2015, a total of 114 outbreaks were reported to NEARS. This summary provides information on characteristics of those outbreaks and the establishments where the outbreaks occurred.

The data included in this summary were collected by NEARS participants in California; Connecticut; Davis County, Utah; Fairfax County, Virginia; Harris County, Texas; Minnesota; New York City; New York State; Rhode Island; Tennessee; and Wisconsin.

88%
outbreaks reported to NORS

Average # of Visits to Complete an Environmental Assessment
2 Visits

Outbreak Characteristics

Contributing Factors

C10
C11
C12

Long-term Benefits of NEARS Participation

Data to improve foodborne outbreak response

What investigation characteristics lead to identification of environmental factors?

Do worker interviews make contributing factor identification more likely?

Data to improve retail food safety

What environmental antecedents are linked with specific contributing factors?

Is lack of ill worker policies linked with workers working while ill?

Summary

Support of environmental assessments at the state and local level

Collection and analysis of environmental assessment data at the national level

Improved identification of environmental factors contributing to foodborne illness outbreaks

Improved prevention and intervention

Improved food safety; fewer outbreaks

Begin Reporting Environmental Assessment Data to NEARS

- **Commit to conducting environmental assessments**
- **Complete NEARS Registration Form(s)**
 - State Notice and Acknowledgment of Local Participation
 - Notice of Participation Form
 - <https://www.cdc.gov/nceh/ehs/nears/registration.htm>
- **Complete CDC's free online environmental assessment training**
 - https://www.cdc.gov/nceh/ehs/elearn/ea_fio/index.htm
