<u>Instructions for Paul Coverdell National Acute Stroke Program (PCNASP) Pre-Hospital Data Elements</u>

Public reporting of this collection of information is estimated to average 30 minutes – 2 hours per response, including the time for reviewing instructions and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a current valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: CDC/ATSDR Reports Clearance Officer, 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333; ATTN: PRA (0920-1108)

NOTES on pre-hospital elements (Updated 11/19/17):

- EMSName should be a unique identifier, not the actual name of the EMS agency, which must fit within character limit. Ensure no duplicate identifiers occur.
- EMSRunNo use the same sequence of numbers for every run sheet if truncating. For instance, you could choose the last 7 digits or first 5 digits, as long as they are unique and will not create duplicates. In the long run, it would be best if the names can be standardized which will help analyzing in the future. Ensure no duplicates occur.

- All states are required to report the "Additional Data Elements" (i.e., listed in section 4.4.3 of the Coverdell Resource Guide) as part of each dataset – pre-hospital, in-hospital, and post-hospital. These three additional elements -- <statenam>, <hospital> and/or <EMSName>, and <patidnum> are needed to support record auditing and analysis.
