

Greetings,

The NOAA education community recognizes that today more than ever, formal and informal educators and students are using live and on demand multimedia content to learn about ocean, atmospheric, climate, Earth science, and related STEM subjects, as well as (to) access education and pedagogic resources and training. In developing multimedia and distance learning materials that convey NOAA's science, service and stewardship, the A(a)gency must insure that these resources are of the highest quality and meet the needs of educators and students across the United States.

To achieve this goal, we need your help. Please take this short (≤ 5 min.) voluntary online survey and identify the types of live and on demand multimedia content (that interests you) you are interested in for your own professional development, or for use with your students or audiences. Your participation is completely voluntary and your answers will be kept (are?) anonymous.

Click here to access the survey. **[INSERT LINK TO SURVEY]**

Thank you in advance for your assistance in this project.

Regards,
