TITLE OF INFORMATION COLLECTION: Soliciting Feedback on the NINR Summer Genetics Institute from Course Alumni

PURPOSE: The National Institute of Nursing Research (NINR) Summer Genetics Institute (SGI) is a summer training program whose purpose is to increase the research capability among graduate students and faculty and to develop and expand clinical practice in genetics among clinicians. The SGI features lectures and hands-on laboratory training. This program, which has about 20-25 participants each year, began in 2000 and has been held in all subsequent years.

Basic concepts and principles of genetics are covered in the lecture component, while the laboratory component focuses on techniques integral to current molecular genetics. Tutorials, utilizing a case-based approach, are used to integrate the concepts and principles of genetics with laboratory experiments that are designed to provide an understanding of genetic testing, detection of genetic disease, how to understand the strengths and limitations of genetic approaches and how to use the information clinically to counsel individuals and families. Ethical, legal and clinical practice issues and perspectives, and the role of the nurse in the area of genetics are also addressed in a seminar format.

The information collected from SGI Alumni will help NINR to assess whether SGI is meeting its goals – for example, information on whether participants report an increase in use of genetics in research, teaching, and clinical practice would help NINR assess the utility/effectiveness of SGI. The results of this survey will determine the extent to which the SGI is achieving its goals and serve to inform discussions and decisions on the future of the program.

DESCRIPTION OF RESPONDENTS: Respondents include SGI Alumni from the past eight years. Respondents will be contacted to complete a one-time survey.
