Noncitrus Fruits Highlights

In 2018, the Nation's utilized production for the 21 estimated noncitrus fruit crops totaled 17.6 million tons, down 4 percent from the comparable 21 crops in 2017. In terms of utilized production, the three largest crops were grapes, apples, and strawberries, which combined for 79 percent of the noncitrus fruits total in 2018. Bearing acreage totaled 1.88 million, down 7 percent from the previous season for the comparable 21 crops. The major deciduous crops accounted for 1.55 million or 82 percent of the total bearing acreage.

The value of utilized production for the 21 noncitrus fruit crops totaled \$16.5 billion, down 8 percent from the previous year for the comparable crops. Grapes, apples, and strawberries claimed the highest values, accounting for 75 percent of the total value of utilized production when combined.

¹ Yield is based on utilized production.

Noncitrus Fruits Comments

Apple, Commercial: Utilized production in 2018 totaled 9.89 billion pounds, down 7 percent from comparable States in 2017. Bearing acreage was estimated at 291,200, up 1 percent from comparable States in the previous year. The average yield was 35,200 pounds per acre, down 2,500 pounds from comparable States in the previous year. Of the total utilized production, 6.87 billion pounds were for the fresh market and 3.03 billion pounds were for processing. The value of the crop totaled \$3.01 billion, down 11 percent from comparable States in the previous season, with an average annual price of 30.5 cents per pound.

Washington growers reported that fire blight was particularly challenging, with less fruit on the trees than appeared at first glance. Growers also reported fruit that matured on the outside but not on the inside, requiring multiple passes through the orchard to harvest. Michigan growers reported no major disease or insect issues. Fruit quality was very good. New York growers reported unseasonably cool temperatures in the spring, slowing bud development and flowering, but by August growers were reporting a good crop during the early harvesting season.

Beginning in 2018, apple estimates were discontinued in Connecticut, Idaho, Illinois, Maine, Maryland, Massachusetts, Minnesota, New Jersey, North Carolina, Ohio, Vermont, West Virginia, and Wisconsin.

Apricot: Utilized production in 2018 totaled 39,370 tons, down 13 percent from 2017. Bearing acreage was estimated at 10,600, down 6 percent from the previous year. The average yield was 3.73 tons per acre, down 0.31 ton from the previous year. Of the total utilized production, 23,870 tons were for the fresh market and 15,500 tons were for processing. The value of the crop totaled \$48.5 million, up 9 percent from the previous season, with an average annual price of \$1,230 per ton.

In California, the crop did not receive its required chilling hours at the correct times, caused by higher than average temperatures during the important fall months.

Avocado: Utilized production in 2018-2019 totaled 183,500 tons, down 2 percent from the previous year. Bearing acreage was estimated at 53,640, down 8 percent from the previous year. The average yield was 3.46 tons per acre, up 0.23 ton from the previous year. Of the total utilized production, 182,010 tons were for the fresh market and 1,490 tons were for processing. The value of the 2018-2019 crop totaled \$400 million, up 2 percent from the previous season, with an average annual price of \$2,180 per ton.

In California, the largest producing State, heatwaves in July and August caused some sun damage to trees and heavy fruit drop. The high temperatures accelerated the harvest. Labor shortages and high water costs continued to be reported by growers. In Florida, disease and hurricane damage continued to negatively impact groves. Acreage and production increased in Hawaii, driven by higher demand for Hawaiian avocado exports.

Banana: Beginning in 2018, banana estimates were discontinued.

Blackberry: Beginning in 2018, blackberry estimates were discontinued.

Blueberry, Cultivated: Utilized production in 2018 totaled 556 million pounds, up 9 percent from comparable States in 2017. Area harvested was estimated at 89,200 acres, up 9 percent from comparable States in the previous year. The average yield was 6,300 pounds per acre, up 80 pounds from comparable States in the previous year. Of the total utilized production, 305 million pounds were for the fresh market and 250 million pounds were for processing. The value of the crop totaled \$797 million, down 1 percent from comparable States in the previous season, with an average annual price of \$1.43 per pound.

Oregon producers reported a very good year for blueberries. Washington growers reported it was an excellent year for blueberries. Both Oregon and Washington blueberry acreage continued to expand. Michigan blueberry growers produced a smaller crop than the past few years. Yields for early and mid-season varieties were average, while those for late mid-season and late season varieties were very poor. Warm weather the last week of December 2017 reduced plants cold hardiness. During the last week of May, when later season varieties bloom, temperatures reached the middle 90s. This

caused flowers to age rapidly and reduced days for pollination to only one or two. The extremely hot weather caused bees to be less active than normal. The combination of these two factors resulted in poor pollination and seed set.

Beginning in 2018, cultivated blueberry estimates were discontinued in Mississippi and New York.

Blueberry, Wild: Utilized production in Maine for 2018 totaled 50.3 million pounds, down 26 percent from 2017. Area harvested was estimated at 18,800 acres, up 11 percent from the previous year. The average yield was 2,680 pounds per acre, down 1,300 pounds from the previous year. Of the total utilized production, 450,000 pounds were for the fresh market and 49.9 million pounds were for processing. The value of the crop totaled \$23.2 million, up 32 percent from the previous season, with an average annual price of 46.0 cents per pound.

Due to cold, wet weather the berries did not do well and production was lower.

Boysenberry: Beginning in 2018, boysenberry estimates were discontinued.

Cherry, Sweet: Utilized production in 2018 totaled 342,070 tons, down 17 percent from comparable States in 2017. Bearing acreage was estimated at 85,000, down 1 percent from comparable States in the previous year. The average yield was 4.05 tons per acre, down 0.79 ton from comparable States in the previous year. Of the total utilized production, 291,060 tons were for the fresh market and 51,010 tons were for processing. The value of the crop totaled \$638 million, down 27 percent from comparable States in the previous season, with an average annual price of \$1,860 per ton.

The California season began later than in recent years and ended in late June. Damaging frosts late in February followed by heavy rains in the early spring negatively impacted the crop. Growers in Oregon and Washington reported mild growing season weather leading to an early harvest.

Beginning in 2018, sweet cherry estimates were discontinued in Michigan.

Cherry, Tart: Utilized production in 2018 totaled 289 million pounds, up 14 percent from 2017. Bearing acreage was estimated at 35,200, down slightly from the previous year. The average yield was 8,470 pounds per acre, up 1,120 pounds from the previous year. Of the total utilized production, 800,000 pounds were for the fresh market and 288 million pounds were for processing. The value of the crop totaled \$56.6 million, down slightly from the previous season, with an average annual price of 19.6 cents per pound.

In Michigan, the largest producing State, growers reported warmer than normal spring temperatures that led to a quick bloom. No major weather related damage occurred throughout the growing season. In Utah, growers reported excellent yields that led to an above average crop. Warmer weather conditions were favorable for an earlier bloom. In Washington, growers reported warmer spring temperatures leading to good quality, size, and shape of the crop. In Wisconsin, snow storms and cool temperatures led to a delay in the harvest. Growers reported a good crop, despite some damage from invasive flies.

Coffee: Utilized production in Hawaii for 2018-2019 totaled 26.4 million pounds (cherry basis), up 7 percent from 2017. Bearing acreage was estimated at 7,100, down 1 percent from the previous year. The average yield was 3,845 pounds per acre, up 315 pounds from the previous year. The value of the crop totaled \$50.2 million, up 15 percent from the previous season, with an average annual price of \$1.90 per pound.

Heavy rains followed by dry periods, potentially caused by vog from the Kilauea Volcano, continued to limit production. Sulfur dioxide from volcanic activity also negatively impacted yields in some areas. Coffee berry borer and root-knot nematode problems were also reported.

Cranberry: Utilized production in 2018 totaled 8.85 million barrels, up 8 percent from comparable States in 2017. Area harvested was estimated at 39,300 acres, up 2 percent from comparable States in the previous year. The average yield was 227.1 barrels per acre, up 13.7 barrels from comparable States in the previous year. Of the total utilized production, 267,660 barrels were for the fresh market and 8.58 million barrels were for processing. The value of the crop totaled \$222 million, down 10 percent from comparable States in the previous season, with an average annual price of \$25.10 per

barrel.

Wisconsin's 2018 season got off to a late start with April snowstorms and some producers in the western part of the State reported hail damage during pollination. Overall, growers reported plentiful precipitation and warm temperatures. Cool, wet conditions started the growing season for Massachusetts, but those dried up quickly with increased temperatures over the summer.

Beginning in 2018, cranberry estimates were discontinued in Washington.

Date: Utilized production in 2018 totaled 40,040 tons, down 7 percent from 2017. Bearing acreage was estimated at 13,100, down 2 percent from the previous year. The average yield was 3.13 tons per acre, down 0.10 ton from the previous year. Of the total utilized production, 28,990 tons were for the fresh market and 11,050 tons were for processing. The value of the crop totaled \$152 million, up 1 percent from the previous season, with an average annual price of \$3,800 per ton.

Fig: Beginning in 2018, fig estimates were discontinued.

Grape: Utilized production in 2018 totaled 7.60 million tons, up 10 percent from comparable States in 2017. Bearing acreage was estimated at 937,000, up 4 percent from comparable States in the previous year. The average yield was 8.11 tons per acre, up 0.43 ton from comparable States in the previous year. Of the total utilized production, 1.10 million tons were for the fresh market and 6.50 million tons were for processing. The value of the crop totaled \$6.62 billion, up 7 percent from comparable States in the previous season, with an average annual price of \$871 per ton.

In California, a cool and wet spring caused the growing season to run a week or more behind normal. However, a warm summer helped crop development. In Washington, bloom ran a week early due to warm temperatures in May. High temperatures in the summer led to sunburn in some varieties.

Beginning in 2018, grape estimates were discontinued in Michigan, Missouri, New York, North Carolina, Ohio, Oregon, Pennsylvania, Texas and Virginia. Also beginning in 2018, estimates were discontinued for Concord and Niagara variety grapes.

Kiwifruit: Utilized production in California for 2018 totaled 37,800 tons, up 14 percent from 2017. Bearing acreage was estimated at 3,900, up 8 percent from the previous year. The average yield was 9.70 tons per acre, up 0.37 ton from the previous year. All of the total utilized production was for the fresh market. The value of the crop totaled \$32.9 million, down 6 percent from the previous season, with an average annual price of \$870 per ton.

In California, high summer temperatures did not harm the development of the crop. Growers reported good quality.

Nectarine: Utilized production in California for 2018 totaled 119,650 tons, down 9 percent from comparable States in 2017. Bearing acreage was estimated at 14,000, down 13 percent from comparable States in the previous year. The average yield was 8.60 tons per acre, up 0.35 ton from comparable States in the previous year. The value of the crop totaled \$105 million, down 12 percent from comparable States in the previous season, with an average annual price of \$874 per ton.

A February frost badly affected some of the early crop. This resulted in a late start to harvest.

Beginning in 2018, estimates for nectarines were discontinued in Washington.

Olive: Utilized production in California for 2018 totaled 52,900 tons, down 72 percent from 2017. Bearing acreage was estimated at 37,500, down 6 percent from the previous year. The average yield was 1.43 tons per acre, down 3.38 tons from the previous year. All of the total utilized production was for processing. The value of the crop totaled \$40.5 million, down 78 percent from the previous season, with an average annual price of \$766 per ton.

California growers reported warm temperatures in early spring which was followed by colder than normal temperatures

and some frost damage. Wetter than normal spring conditions caused a poor bloom.

Papaya: Utilized production in 2018 totaled 10.3 million pounds, down 54 percent from 2017. Bearing acreage was estimated at 800, down 27 percent from the previous year. The average yield was 13,000 pounds per acre, down 10,300 pounds from the previous year. Of the total utilized production, 7.00 million pounds were for the fresh market and 3.29 million pounds were for processing. The value of the crop totaled \$5.70 million, down 39 percent from the previous season, with an average annual price of 55.4 cents per pound.

The Hawaii crop was severely damaged by the eruption of the Kilauea volcano that began in May 2018 and lasted for several months. In the Puna District, on the east side of the Big Island where most of the papaya crop is grown, lava smothered farms or blocked access to properties at peak harvest time. Many of the trees not covered by lava were destroyed by the sulfuric oxide gases.

Peach: Utilized production totaled 638,020 tons, down 2 percent from comparable States in 2017. Bearing acreage was estimated at 74,500, down 5 percent from comparable States in the previous year. The average yield was 8.74 tons per acre, up 0.39 ton from comparable States in the previous year. Of the total utilized production, 279,790 tons were for the fresh market and 358,230 tons were for processing. The value of the crop totaled \$511 million, down 3 percent from comparable States in the previous season, with an average annual price of \$801 per ton.

In California, Freestone growing conditions were ideal with warm days and cool evenings which helped with color and sizing. California's Clingstone crop full bloom occurred during the middle of March, a few days later than 2017. While the bloom was considered to be good, colder than normal spring temperatures appeared to have negatively impacted the fruit set. Some hail damage was reported in the Modesto area during the middle of April, however the overall impact on the crop was minimal. In South Carolina, a freeze in March affected some early varieties in low lying locations. Size and price were reported as very good. In Georgia, there were adequate chill hours for the crop. However, a few freezes in early to mid-March damaged some early varieties.

Beginning in 2018, peach estimates were discontinued in Alabama, Idaho, Illinois, Maryland, Missouri, New York, North Carolina, Ohio, Texas, Utah, Virginia, and West Virginia.

Pear: Utilized production in 2018 totaled 800,260 tons, up 9 percent from 2017. Bearing acreage was estimated at 46,300, up slightly from the previous year. The average yield was 17.4 tons per acre, up 1.4 tons from the previous year. Of the total utilized production, 557,700 tons were for the fresh market and 242,560 tons were for processing. The value of the crop totaled \$429 million, down 17 percent from the previous season, with an average annual price of \$536 per ton.

In Oregon and Washington, growers reported lower prices due to the larger crop. In California, the crop was significantly lighter than the previous year due to inconsistent weather patterns that hindered pollination and high instances of fire blight. While the crop was lighter, quality was reported to be good with larger sizes.

Beginning in 2018, Bartlett pear and other pear estimates were discontinued.

Plum: Utilized production in California for 2018 totaled 99,000 tons, down 14 percent from 2017. Bearing acreage was estimated at 14,000, down 7 percent from the previous year. The average yield was 7.16 tons per acre, down 0.70 ton from the previous year. The value of the crop totaled \$92.6 million, down 19 percent from the previous season, with an average annual price of \$935 per ton.

A February cold snap during the early part of the bloom resulted in some damage to early plum varieties. The season started two weeks late with light supplies, but as the season progressed into the mid and late season varieties, growers reported a normal sized crop with good quality.

Prune: Utilized production in California for 2018 totaled 90,200 tons, down 14 percent from 2017. Bearing acreage was estimated at 44,000, down 2 percent from the previous year. The average yield was 2.05 tons per acre, down 0.28 ton from the previous year. The value of the crop totaled \$195 million, down 6 percent from the previous season, with an average annual price of \$2,160 per ton.

Cold and wet weather conditions during the bloom caused variability in pollination. Hot weather over the summer slowed the development and sweetness of fruit on the trees. Growers reported a good fruit set, but noted losing some branches in older groves that had wood rot and disease issues.

Raspberry: Utilized production in 2018 totaled 217 million pounds, down 1 percent from comparable States in 2017. Harvested acres were estimated at 16,900, down 7 percent from comparable States in the previous year. The average yield was 12,900 pounds per acre, up 800 pounds from comparable States in the previous year. Of the total utilized production, 132 million pounds were for the fresh market and 85.0 million pounds were for processing. The value of the crop totaled \$367 million, down 25 percent from comparable States in the previous season, with an average annual price of \$1.69 per pound.

California's raspberry producing regions experienced both freezing temperatures and heavy rains in the spring months. Cooler temperatures during the summer led to higher yields. Growers along the Central Coast wrapped up harvest near the end of October. Washington's raspberry growers struggled to find contracts due to an oversupply of imported frozen raspberries. Producers grappled with the decision as to whether to accept a much lower processing price or leave production in the fields.

Beginning in 2018, raspberry estimates were discontinued in Oregon. Black and red raspberry estimates were discontinued for all States.

Strawberry: Utilized production in 2018 totaled 28.6 million cwt, up 5 percent from 2017. Area harvested was estimated at 49,220 acres, down 7 percent from the previous year. The average yield was 580.6 cwt per acre, up 69.2 cwt from the previous year. Of the total utilized production, 22.9 million cwt were for the fresh market and 5.63 million cwt were for processing. The value of the crop totaled \$2.67 billion, down 8 percent from the previous season, with an average annual price of \$93.50 per cwt.

In California, the largest producing State, many growers reported an increase in yields due to new varieties. Favorable weather conditions for most of the season led to increased production compared with the previous season. In Florida, growers reported warm and favorable weather conditions as well. In North Carolina, warmer weather in February resulted in earlier blooms. In the spring, a freeze event, followed by rainy weather, caused some damage to the crop.

Tree Nuts Comments

Almond: Utilized production in California for 2018 was estimated at 2.24 billion pounds, up 1 percent from 2017. Bearing acreage was estimated at 1.09 million, up 6 percent from the previous year. The average yield was 2,090 pounds per acre, down 110 pounds from the previous year. The value of the crop totaled \$5.47 billion, down 2 percent from the previous season, with an average annual price of \$2.44 per pound.

The bloom began a few days earlier than normal, but was extended due to cold temperatures, and lasted a few weeks. Frosts during bloom hit orchards hard, especially on the east side of the valley, with younger trees impacted more severely than older trees. Weather during the spring was variable. As temperatures warmed up in May, nuts sized well. Disease and mite pressure was light. Yields were down from 2017 as a significant number of new tree acres came into bearing.

Hazelnut: Utilized production in Oregon for 2018 totaled a record high 51,000 tons, up 59 percent from 2017. Bearing acreage was estimated at 44,000, up 10 percent from the previous year. The average yield was 1.16 tons per acre, up 0.36 ton from the previous year. The value of the crop totaled \$91.8 million, up 25 percent from the previous season, with an average annual price of \$1,800 per ton.

In Oregon, overall acreage has doubled in the last 10 years, as varieties resistant to Eastern Filbert Blight have been developed. Growers favor the crop because it is both high-value and low-maintenance. Weather conditions were favorable during the pollination period.

Macadamia: Utilized production in Hawaii for 2018 totaled 35.3 million pounds, down 28 percent from the previous year. Bearing acreage was estimated at 16,900, down 1 percent from the previous year. The average yield was 2,090 pounds per acre, down 790 pounds from the previous year. The value of the crop totaled \$42.0 million, down 22 percent from the previous season, with an average annual price of \$1.19 per pound.

Growing conditions in Hawaii were negatively impacted by the eruption of a volcano. Also, heavy rains from Hurricane Lane in the fall damaged the crop, causing lower yields.

Pecan: Utilized production in 2018 totaled 243 million pounds, down 20 percent from 2017. Bearing acreage was estimated at 409,900, up 1 percent from the previous year. The average yield was 593 pounds per acre, down 160 pounds from the previous year. Of the total utilized production, 206 million pounds were sold shelled and 37.4 million pounds were sold in shell. The value of the crop totaled \$425 million, down 40 percent from the previous season, with an average annual price of \$1.75 per pound.

New Mexico production surpassed Georgia production for the first time since 2006. In Georgia, pecan production was the lowest since 2006. This was the result of Hurricane Michael negatively impacting much of the pecan growing region. In addition, wet conditions during the summer months increased disease pressure and later limited the harvest of nuts blown off trees. Extended wet conditions and heavy rains during harvest affected the quality and quantity of pecans harvested in Texas.

Pistachio: Utilized production in California for 2018 totaled a record high 987 million pounds, up 64 percent from the previous year. Bearing acreage was estimated at 264,000, up 6 percent from the previous year. The average yield was 3,740 pounds per acre, up 1,340 pounds from the previous year. Of the total utilized production, 742 million pounds were sold in shell and 245 million pounds were sold shelled. The value of the crop totaled \$2.62 billion, up 158 percent from the previous season, with an average annual price of \$2.65 per pound.

California pistachios are an alternate bearing crop and 2018 was an “on” year. High yields, increasing acreage, and low insect damage led to the highest production on record.

Walnut: Utilized production in California for 2018 totaled 676,000 tons, up 7 percent from the previous year. Bearing acreage was estimated at 350,000, up 4 percent from the previous year. The average yield was 1.93 tons per acre, up 0.05 ton from the previous year. Of the total utilized production, 469,000 tons were sold shelled and 207,000 tons were sold in-shell. The value of the crop totaled \$879 million, down 44 percent from the previous season, with an average annual price of \$1,300 per ton.

Late spring rains attempted to damper the crop, but provided cooler conditions which increased kernel size and helped quality. Insect pressure was reported to be down from last year. During the excessive heat waves over the summer, growers applied sunburn preventative materials.

Definition of Terms

Bearing acreage: An orchard, grove, or vineyard is considered to be of bearing age when it can normally be expected to produce a commercially significant quantity of the crop. Bearing age is a function of many factors including variety, rootstock, year planted, etc.

Apple crop: Apple production estimates are published only for commercial orchards, according to the laws governing crop production reports (7 U.S.C 590a). Commercial orchards, under these laws, are defined as orchards of 100 or more bearing trees.

Harvested not sold: Fruit of marketable quality that was picked but not sold for various reasons are included in total production.

Total production: The quantity of utilized production plus quantities harvested but not sold.

Utilization: These estimates refer to the first utilization, not necessarily the final utilization of a crop. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity.

Utilized production: The amount of a crop sold plus the quantities used at home or held in storage represents utilized production.

Yield per acre: Unless otherwise stated, yield per acre is based on total production.

Price and Value Definitions

Price: Prices in this report represent the Market Year Average (MYA) price. For a crop sold for both fresh market and processing, the total crop MYA is a weighted average of the fresh and processing prices.

Prices for fresh fruit represent the average price producers receive at the point of first sale. This is commonly referred to as the average price as sold. The exception is fresh fruit sales in California, Michigan (apples only), New York (apples only), and Washington which are equivalent returns at packinghouse door.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries, California olives, and freestone peaches, which are priced at the first delivery point.

Value: Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts which are based on a calendar year.

State MYA Price and Value Computations

Fresh Market Value:

Fresh Market MYA * Fresh Market Utilization

Processed Value:

Processed MYA * Processed Utilization

"All" Value:

Fresh Market Value + Processed Value

"All" MYA:

"All" Value / "All" Utilization

For commodities with components not identified by market channel, substitute breakdown name for fresh market/processed and use the same procedure.

United States MYA Price and Value Computations

Fresh Market MYA:

Processed MYA:

$$\frac{\sum(\text{Processed Value For All States})}{\sum(\text{Processed Utilization For All States})}$$

"All" MYA:

$$\frac{\sum(\text{Value For All States})}{\sum(\text{Utilization For All States})}$$

Noncitrus Fruits Marketing Seasons

Apple, commercial: July to May for Illinois, Michigan and Ohio; August to December for Minnesota, New Jersey, and Wisconsin; August to June for all other states

Apricot: May 15 to July 5 for California; June 20 to August 1 for Washington

Avocado: November 1 to October for California; June 20 to March 1 for Florida; January 1 to December 31 for Hawaii

Banana: January 1 to December 31

Blackberry, cultivated: June to October

Blueberry, cultivated: March to October

Blueberry, wild: July to September

Boysenberry: July to August

Cherry, sweet: April 25 to June 15 for California; June to July for all other States

Cherry, tart: June 25 to August 15

Coffee: October to September

Cranberry: September to January

Date: August 15 to March 15

Fig: June 5 to October 30

Grape: May 25 to July for Table (California); June 5 to July 31 for Raisin (California); August 15 to December 15 for Wine (California and Washington); September 15 to November 1 for Juice (Washington); July to October for all other States

Kiwifruit: October 1 to May 31

Nectarine: April 30 to October 15

Olive: August 1 to July 31

Papaya: January 1 to December 31

Peach: July 10 to September 15 for Clingstone (California); April 20 to October 10 for Freestone (California); May to August for Georgia and South Carolina; July to September for all other States

Pear: July to December for Bartlett (California, Oregon, and Washington); July to June for other (California, Oregon, and Washington)

Plum: May 15 to October 20 for California

Prune, dried: August 20 to April 15 for California

Raspberry: May through November

Strawberry: September 15 to December 31 for California; December 15 to May 15 for Florida; April 10 to June 15 for North Carolina; June to July for all other States

Tree Nuts Marketing Seasons

Almond: August 5 to November 15

Hazelnut: October 1 to November 30

Macadamia: July 1 to June 30

Pecan: October 1 to March 31

Pistachio: September 30 to January 30

Walnut: September 15 to November 10

For detail by States, see Agricultural Handbook No. 729, *Fruits and Tree Nuts: Blooming, Harvesting, and Marketing Dates, December 2006*.

Statistical Methodology

Survey Procedures: Probability based grower disposition surveys are used to collect acreage, yield, production, and price data. These fruit inquiries are generally mailed surveys at the end of the growing season. Telephone follow-up of mail survey non-response is used to ensure adequate coverage. They provide indications of the quantity used on farms, the quantity sold directly to consumers, and production not sold or utilized.

Estimating Procedures: Information obtained from the non-citrus fruits and nuts grower surveys along with federal administrative data is used to establish estimates of bearing acres, yield, total production, utilized production, price, and value. These estimates are reviewed for errors, reasonableness, and consistency with historical estimates.

Revision Policy: Final survey indications and check data for most non-citrus fruits and nuts are available prior to submitting utilization estimates. End-of-season estimates of production are made following harvest and are subject to revision the following year based on a thorough review of all available data.

Reliability: Survey indications are subject to sampling variability because all operations growing non-citrus fruits and/or nuts are not included in the sample. Survey results are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

Information Contacts

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: www.nass.usda.gov
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit www.nass.usda.gov and click on “National” or “State” in upper right corner above “search” box to create an account and select the reports you would like to receive.
- Cornell’s Mann Library has launched a new website housing NASS’s and other agency’s archived reports. The new website, <https://usda.library.cornell.edu>. All email subscriptions containing reports will be sent from the new website, <https://usda.library.cornell.edu>. To continue receiving the reports via e-mail, you will have to go to the new website, create a new account and re-subscribe to the reports. If you need instructions to set up an account or subscribe, they are located at: <https://usda.library.cornell.edu/help>. You should whitelist notifications@usda-esmis.library.cornell.edu in your email client to avoid the emails going into spam/junk folders.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the [USDA Program Discrimination Complaint Form](#) (PDF), found online at www.ascr.usda.gov/filing-program-discrimination-complaint-usda-customer, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.
