

SUPPORTING STATEMENT  
U.S. Department of Commerce  
U.S. Census Bureau  
Generic Clearance for Questionnaire Pretesting Research  
OMB Control No. 0607-0725

B. Collections of Information Employing Statistical Methods

1. Universe and Respondent Selection

The data collected will be used for questionnaire development activities rather than to produce estimates about populations. For the most part, the small-scale testing activities undertaken as part of this clearance will involve purposive or convenience samples, with respondents selected either to cover a broad range of demographic subgroups or to include specific characteristics related to the topic of the survey. In some instances, a probability sample may be drawn, for example, for mail surveys or to permit statistical comparisons about the effectiveness of alternative procedural treatments. A description of the plans for selecting respondents for each individual test will be provided to OMB at the time the questionnaires are submitted.

2. Procedures for Collecting Information

Data collection procedures for the testing conducted under this clearance will be varied, and will most likely include personal visit, telephone, mail and Internet surveys. Statistical results will generally be limited to response rates (for mail surveys), item nonresponse rates, frequency distributions of data items, and analysis of behavior coding and respondent debriefing data. More specific information about data collection procedures will be contained in the description provided to OMB at the time the questionnaires are submitted.

3. Methods to Maximize Response

In general, telephone, mail, or email reminders will be used to maximize response rates for field tests. For usability and cognitive interviews as well as focus groups, participants will be reimbursed for their time and travel expenses. Reminder phone calls and/or emails to participants will be used to encourage them to keep their appointments. Tallies will be kept of the number of nonrespondents to all testing activities. Information that is more specific will be contained in the description provided to OMB at the time the questionnaires are submitted.

4. Testing of Procedures

This entire submission consists of tests of data collection instruments and survey/census procedures. We expect that all the tests conducted under this clearance will result in

simpler questionnaires and/or procedures and thus reduced respondent burden.

5. Contacts for Statistical Aspects and Data Collection

Jennifer Childs served as general methodological consultant for this project. Additional advice on statistical aspects of each individual survey will be sought as the testing program proceeds. Depending on the nature of the research, staff from subject-matter divisions, operational divisions, and the Center for Behavioral Science Methods will have primary responsibility for data collection and analysis. The specific research project will also determine whether the data will be collected by the Census Bureau or through a contractor. Jennifer Childs is the contact person for general questions about data collection and analysis. Other contact persons for questions regarding data collection and statistical aspects of the design will be provided to OMB at the time the questionnaires are submitted.
