**Abstract:** The USGS manages the National Hydrography Dataset (NHD), Watershed Boundary Dataset (WBD), and National Hydrography Dataset Plus High Resolution (NHDPlus HR). All three hydrography datasets are user-driven data, where state stewards, or USGS trained editors, perform edits to support data accuracy. The USGS role is also to provide an appropriate editing tool, offer technical support, and to distribute the datasets to the public at no cost via The National Map and, ultimately, US Topo.

“Markup Application” is the name of the USGS web application that allows citizen participation in volunteer map data collection activities for hydrography datasets. The Markup Application allows citizens to submit proposed changes and corrections, called markups, to the NHD, WBD, and NHDPlus HR by drawing newly proposed geographic features on the map or by filling out a form that explains a suggested change for a selected feature. All submitted markups, along with the user email contact, are saved in a database to be reviewed by NHD or WBD state stewards, or USGS staff, for validation. State stewards or USGS staff may contact the data volunteer via the recorded email address if further clarification is needed for a proposed change. Validated markups go in a queue of edits to be incorporated into the NHD, WBD or NHDPlus HR. The edits are made by NHD or WBD state stewards, or USGS editors using established editing tools. No edits to the hydrography datasets take place within the Markup Application.

**Title of Collection:** Markup Application.

**OMB Control Number:** 1028–NEW.

**Form Number:** None.

**Type of Review:** New Collection.

**Respondents/Affected Public:** General Public.

**Total Estimated Number of Annual Respondents:** 113.

**Total Estimated Number of Annual Responses:** 1,936.
