Question Text	<p>There are several different kinds of tests to check for colon cancer. Colonoscopy (colon-OS-copy) and sigmoidoscopy (sigmoid-OS-copy) are exams in which a doctor inserts a tube into the rectum to look for polyps or cancer. For a colonoscopy, the doctor checks the entire colon, and you are given medication through a needle in your arm to make you sleepy, and told to have someone drive you home. For a Sigmoidoscopy, the doctor checks only part of the colon and you are fully awake.</p> <p>Have you EVER HAD a colonoscopy?</p> <p>*Read if necessary:</p> <p>A polyp is a small growth that develops on the inside of the colon or rectum.</p> <p>Before these tests, you are asked to take a medication that causes diarrhea.</p>
