

REQUEST FOR DETERMINATION OF RESEARCH STATUS

To be completed by the staff member with lead responsibility for the project and approved by branch chief (if applicable) and Division ADS. A separate PGO funding memo is required if project is research and involves human subjects regardless of the CDC staff role.

Instructions:

- (1) Use this form to declare: (a) the research status of any project, (b) role or roles of CDC staff
- (2) A short summary should be attached offering specific details about the project and the role of staff.
- (3) Be sure to complete all applicable items, obtain appropriate signatures and submit this form for approval.

To Be Determined

| 6.4.2 | Is this material or information recorded in such a manner by the investigator that the subjects cannot be identified directly or indirectly through identifiers linked to the subjects? (Note: If a link is created by an investigator even temporarily, for research purposes, this criterion is not met. If a temporary link is created by clinical staff who already have access to the data, this criterion is met). | | | | | | |
|-------|---|----|---|--|--|--|--|
| | | | | | | | |
| | [] | NO | (there are identifiers (including codes)) | | | | |

- Please prepare and attach a short summary paragraph (<1 page); if this is new:
 - a. Be sure to include the purpose of the project, specific details about the project and the role of the CDC staff member (s) in the project. In explaining one's role as a consultant be particularly careful to identify involvement in things like: study design decisions, oversight of protocol development, participation in review of data collection procedures, and participation in data analysis and/or manuscript preparation, as well as whether there will be access to identifiable or personal data.
 - b. Explain your project status selection (research--non-exempt, exempt, no CDC investigator or not involving human subjects; public health practice). If you selected research not involving human subjects be sure to indicate if the data includes any personal information (e.g., name, SSN), linkable study identification numbers or codes, or geographical information.

Through non-research cooperative agreements, this funding will support agencies and organizations that coordinate and manage Maternal Mortality Review Committees (MMRCs) to identify and characterize maternal deaths for identifying prevention opportunities. Recipients will identify pregnancy-associated deaths within one year of death; abstract and enter clinical and non-clinical data into a standard data system [Maternal Mortality Review Information Application (MMRIA)], conduct multidisciplinary reviews, and enter committee decisions in MMRIA within 2 years of death. Quality assurance processes, in partnership with CDC, will be used for improving data quality, completeness, and timeliness. Recipients will analyze their data, and CDC will analyze aggregated data across recipients, and share findings with stakeholders to inform policy and prevention strategies to reduce maternal deaths.

Users will enter personally identifiable information (PII) into MMRIA for their purposes; but only data with limited identifiers will be shared with CDC to support aggregated analyses across awardees.MMRIA data is protected from unauthorized access, use, disclosure, duplication, modification, diversion, or destruction—whether accidental or intentional—in order to maintain confidentiality, integrity, and availability. The security and privacy controls that provide this protection meet minimum federal requirements with additional risk-based and business-driven control implementation achieved through a defense-in-depth security structure.

This project is non-research because the primary purposes are surveillance for informing policy and program development within awardee jurisdictions. Thus, the purpose of this surveillance system is to prevent maternal mortality in a defined population by producing information about the population from whom the data were collected.

8. Please list the primary project site and all collaborating site(s).

Explanation of project components:

9. If project involves research that is funded extramurally, list amount of award that should be restricted pending IRB approval and describe which project components will be affected, if known:
