Local Exchange Telephone Subscription

Report lines or wireless channels (hereafter, "lines") in this state that you (including affiliates) use to provide local exchange or exchange access services that allow end users to originate and/or terminate local telephone calls on the public switched network, whether used by the end user for voice telephone calls or for other types of calls carried over the public switched network (for example, lines used for facsimile equipment or lines used occasionally or exclusively for "dial-up" connection to the Internet).

Do not report lines not yet in service, lines used for interoffice trunking, company official lines, or lines used for special access services. Do not report any lines that connect two locations of the same end user customer, ISP, or communications carrier. Where you are already reporting the portion of a circuit between the end user and your switching center, do not separately count the portion of that circuit between your switching center and a circuit-switched, Internet protocol, or ATM network, irrespective of whether you multiplexed the circuit onto a higher-capacity facility between your switching center and that network.

Interconnected VoIP Subscriptions

Interconnected VoIP service is a service that enables real-time, two-way voice communications; requires a broadband connection from the user's location; requires Internet-protocol compatible customer premises equipment; and permits users generally to receive calls that originate on the public switched telephone network and to terminate calls to the public switched telephone network. See 47 C.F.R. §9.3. Interconnected VoIP providers should determine location based on the subscriber's broadband connection or the subscriber's "Registered Location" as of the data-collection date. "Registered Location" is the most recent information obtained by an interconnected VoIP service provider that identifies the physical location of an end user. See 47 C.F.R. § 9.3 (in the part of the FCC rules setting E911 requirements for interconnected VoIP).

Mobile Voice Subscription

In Part III, report cellular, PCS, and other mobile voice telephony subscribers in the state that you served over your own facilities. Include directly billed subscribers, pre-paid subscribers, and subscribers served via resellers. Count a subscriber as a mobile handset, car-phone, or other revenue-generating active voice unit that has a unique phone number and that can place and receive calls from the public switched telephone network. Subscriber counts by state should be based on the area codes of the phone numbers provided to subscribers.

* All fields are required
