## **PART B INTRODUCTION**

The Office Population Affairs (OPA), (formerly the Office of Adolescent Health (OAH), which merged into OPA, effective June 2019) is requesting approval for the collection of performance measures from the grantees to be awarded Teen Pregnancy Prevention (TPP) Program funding in FY2020. The TPP Program was initiated in FY 2010 as one of six major evidence-based policy initiatives across the Federal government. OAH supports two types of grants through the TPP program (1) projects that replicate evidence-based TPP program models that have been shown to be effective through rigorous evaluation, referred to as Tier 1 and (2) research and demonstration projects that develop and test additional models and innovative strategies to prevent teen pregnancy, referred to as Tier 2. Funding for the TPP Program is authorized under the authority of Division A, Title II of the Further Consolidated Appropriations Act, 2020 (Public Law No. 116-94.). The Act provides \$100 million in FY 2020 for making competitive awards to public and private entities to fund programs that reduce teen pregnancy. In FY 2020, OAH anticipates awarding new three-year cooperative agreements.

Performance measures have consistently been a requirement of the TPP grant program since its inception. The majority of the measures that are included in this information collection request previously received OMB clearance (0990-0392 and 0990-0438) and have been successfully used over the past 8 years with the initial cohorts of grantees funded during FY2010 and FY2015. Based on our data collection experiences over the last four years, and in consideration of the goals of the FY2020 cohort of grantees, the proposed measures have been modified slightly, as presented within SSA. Based on our experience, we have removed and the cost items and added a few metrics that track systems-level networks that are important for tracking the progress of the new grants.

This Supporting Statement requests approval for collection of performance measures for the FY2020 cohort of TPP grantees.

## **B1. Respondent Universe and Sampling Methods**

We estimate up to 90 grantees will receive TPP funding in FY 2020. All of these grantees will be reporting data; there will be no sampling of respondents. A couple of items are specific to a particular tier, such as the Tier 1 Supportive Services and Tier 2 Innovative Network projects items; the participant-level items are not relevant to the Tier 2 Innovative Network participants. For observed quality and fidelity measures, Tier 1 and Tier 2 Phase II grantees will report on a sample of at least 10% of program sessions.

## **B2. Procedures for the Collection of Information**

Most of the program-level measures (pertaining to participant reach, dosage, and fidelity) collected by grantees and their sub-awardees (or implementing organizations, who potentially could be partners that are not funded directly through the grants) will be collected by aggregating data obtained from the staff implementing the program. The grantee-level measures (such as number of partners, training, dissemination, sustainability) will be tracked and summarized from the grantees' or sub-awardees' administrative records. All measures will be entered into the cloud-based database.

## **B3. Methods to Maximize Response Rates and Deal with Non-response**

Because completion of performance measures has been a funding requirement for the TPP cooperative agreements awarded since 2010, we have had nearly a 100% grantee response rate for the first cohorts of TPP grantees (funded in FY2010 and FY2015). This requirement was stipulated in each of the three funding opportunity announcements for the FY 2020 awards. All grantees will be trained and given ongoing technical assistance in the web based data collection procedures to facilitate their reporting.

## **B4. Tests of Procedures or Methods to be Undertaken**

These measures have been reported successfully over the past eight years.

## **B5. Individuals Consulted on Statistical Aspects and Individuals Collecting and/or Analyzing Data**
