*Abstract:* The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Gold Mine Ore Processing (40 CFR Part 63, Subpart EEEEEEE) were proposed on April 28, 2010; and promulgated on February 17, 2011. These regulations apply to both existing and new gold mine ore processing and production facilities that are area sources and use ore pretreatment, carbon processes with mercury retorts, carbon processes without mercury retorts, and non-carbon concentrate processes. The regulation sets mercury emission limits for each of the affected processes at both new and existing facilities. New facilities include those that either commenced construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR Part 63, Subpart EEEEEEE.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

*Form Numbers:* None.

*Respondents/affected entities:* Gold mine ore processing and production facilities.

*Respondent's obligation to respond:* Mandatory (40 CFR Part 63, Subpart EEEEEEE).

*Estimated number of respondents:* 21 (total).

*Frequency of response:* Initially, occasionally, semiannually, and annually.

*Total estimated burden:* 2,840 hours (per year). Burden is defined at 5 CFR 1320.3(b).

*Total estimated cost:* \$556,000 (per year), which includes \$227,000 in annualized capital/startup and/or operation & maintenance costs.

*Changes in the Estimates:* The burden in labor hours is unchanged from the previous ICR renewal and the number of responses is unchanged. The costs of performance testing and CEMS monitoring are unchanged from the previous ICR renewal. The regulations have not changed over the past three years and are not anticipated to change over the next three years. The growth rate for the industry is very low, negative or non-existent, so there is no change in the estimate of the number of sources subject to these regulations since the previous ICR renewal.
