NAHRS Monthly Report

OMB Approved 0579-0299 EXP: 09/2022

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0299. The time required to complete this collection of information is estimated to average 8 hours per response, including the time to review instructions, search existing data resources, gather the data needed to respond to the collection of information, and review and approve the information collected.

Diseases inferred as present for your State

The diseases listed below were inferred as present in your State for the month of April 2020 based on test result data from the past month and information from the past three months. These are listed for informative purposes and you will need to confirm the disease(s) present in the State.

Caprine And Ovine: Caprine Arthritis And Encephalitis

Although there were no positive test results in the past month and encephalitis for Caprine And Ovine animals was reported in the state for 1 out of the past three months.

Reportable disease list

Please mark the following diseases as either present or not (Yes/No) for your State in the month of April 2020.

All responses are marked "No" by default. If you received information that a disease is present based on NAHRS reporting criteria, then mark "Yes."

If you received a report of a case that does not fit the NAHRS case definition criteria, but you have additional evidence to support the presence of the disease, mark "Yes."

If you received no reports of a suspected disease that fits the NAHRS case definition criteria and you do not have additional evidence to support the presence of a confirmed disease, then leave the disease marked "No."

Report any of the following: Suspect case: Animal determined to be at high risk of exposure to an infected person, AND demonstrating compatible clinical signs as determined by an animal health professional. Presumptive positive case: Animal tests positive by SARS-CoV-2 real time RT-PCR. Confirmed positive case: Sequence confirmation of virus either direct from sample or from virus isolate, OR demonstration of SARS-CoV-2 neutralizing antibody. All confirmatory testing will occur at NVSL.
